3. Specifications and Special Conditions & Provisions

- 3.1. **General:** The City of Grand Junction is soliciting competitive bids from qualified and interested companies for all labor, equipment, and materials required to provide and deliver outlet valve replacement supplies for Juniata Reservoir. All dimensions and scope of work should be verified by Bidders prior to submission of bids.

No installation is required for this purchase. This is a products/materials purchase only.

- 3.2. **Project Description:** The new gates will be installed at Juniata Reservoir's outlet structures. There is a mid-level outlet structure at approximately 50-ft below the water surface with two valves, and a low-level outlet structure at approximately 100-ft below the water surface with two valves. These valves are located on the upstream side of the dam and are attached to pipes extending through the dam to control the outlet flow of water. The new valves will attach to existing 12-inch diameter pipe with Class 150 flanges under the trash racks guards. This project will be replacing the four (4) existing Dresser gate valves and Miller Fluid Power hydraulic actuators that are over 40 years old.

Each existing gate valve and actuator are installed in the vertical position. Each valve has a hydraulic actuator attached to it via a rectangular bracket. The hydraulic actuators are opened and closed by copper hydraulic pipes that run from the surface hydraulic jacking pump to each actuator. The valves are opened and closed annually as needed to control the flow out of the reservoir. Estimated temperatures of the reservoir water vary by season from 40-70 degrees F.

Bids submitted for this project shall meet the specifications provided. There are two bid options. The first bid option is for ductile iron gate valves and the second bid option is for stainless steel knife gate valves. Suppliers submitting a bid shall include a cost for each bid option. The City will decide which bid option to go with from the apparent low bidder. **Pre-approval of proposed products that may differ from the provided specifications need to be submitted to the City for review by the inquiry deadline.** The City will review submittals of proposed products to determine if they are equal and issue an addendum stating approval or disapproval. Submitted bids shall include the completed bid schedule (both options), cut-sheets, specifications, descriptions, and estimated delivery for the valves and hydraulic actuators being submitted. The City Engineering Dept. will review the apparent low bid for each option and review the submitted cut sheets and specifications prior to awarding a contract and purchase order.

3.3. Specifications:

12-inch valves, ANSI Class 150 Flange valve with attached hydraulic actuator operating system designed for submersible operation. The valves and actuators shall be designed for continuous submerged service at 100-foot head pressure.

The valves and hydraulic actuators shall be fully shop assembled, adjusted, inspected, and tested for operation and leakage before shipment. Engineering Approval is required on both valves and hydraulic actuators to manufacturing and assembly.

All four gate valves with actuators must be delivered and assembled from the manufacture/vendor, as all four valves will need to be installed during a single time frame by underwater divers. Please quote your anticipated delivery schedule with a not to exceed date, as divers and support boat will need to be scheduled from outside the area for installation.
