

## Skate Park Community Feedback on Eagle Rim Improvements

“One of the main points I would like to bring up is the repair of the low ledge that is missing angle iron. It is a danger when grinding and the whole box can't be utilized.”

The other thing would be to change the most unused obstacle of the park. The two-flat-two stair set (photo attached) is rarely used and is very out of the way for the type of obstacle it is. I think adding something like a step up (also attached) would be a simple and hopefully cheap solution. I think adding in some concrete to the now dirt area (photo attached) would really open up that side of the park and improve the overall flow.”

“We listed them in order of priority in hopes that we have remaining funds of the budget.

#1- euro gap/concrete slab dirt area, being our main priority of this budget.

#2- quarter pipe at end of the park

#3- smaller quarter pipe at beginning of park”

“My own personal priority would be the dirt area on the south side of the park. As you can see from the picture this area gets washed out every time there’s a storm bringing dirt and rocks down into the park. That picture is from this guys website: <https://trucksandfins.com/en/spots/skateparks/eagle-rim-skatepark/20846> - there’s a few more pictures on there should you need. Not sure what kind of creative effort could be put into that area but at the very least if it was filled in with concrete that would be a great improvement.”
