## **Section 4.0: Specifications/Scope of Services**

- 4.1. General/Background:** The City of Grand Junction is interested in hiring a licensed professional architect/engineer to provide programming, design and construction assistance services for the construction of a new Administration/Maintenance Building to be located at the Persigo Wastewater Treatment Facility located at 2145 River Road, Grand Junction, CO 81505.

The City of Grand Junction manages, operates, and maintains the Persigo wastewater collection and treatment system for the benefit of the current and future users of sewer service in the Persigo 201 Service Area. The City maintains two building facilities in support of the system; an administration and maintenance building located at the Persigo wastewater treatment facility at 2145 River Road and a collections maintenance building at 251 27 Road.

The existing Administration Building was built in 1982. It is approximately 13,500 square feet and includes office space, a laboratory, kitchen/lunchroom, conference room, and maintenance shop with a high bay for specialty vehicle parking. It has undergone several renovations including retrofitting maintenance shop space to offices and a conference room. The building needs to be rehabilitated or replaced to address:

- aging assets,
- current building code requirements,
- operational safety,
- physical security,
- inadequate office space for current and anticipated future staffing levels,
- inadequate space for SCADA control center,
- inadequate warehousing space for supplies and spare parts,
- insufficient storage and garage space for equipment and specialty vehicles that require climate control,
- inadequate meeting space to accommodate large group meetings,
- inadequate HVAC system to support laboratory operations and office space environments,

- safety hazards associated with electrical equipment and motor control center (MCC) within the building,
- inadequate kitchen/lunchroom facilities to support staffing levels, and
- insufficient bench space in maintenance shop.
- insufficient locker room space, restrooms, and showering facilities for current staffing levels

The Collections Maintenance Building was built in 1979 and was originally designed for a fire station. It is 2560 square feet and includes office space, a kitchen, meeting room, and two high bay specialty vehicle parking spaces. The building has undergone several renovations including new high bay doors, locker room remodel, and parking lot extension. There currently is no additional room for expanding the current building footprint or parking lot due to lot size limitations. The building needs to be replaced to accommodate:

- insufficient storage and garage space for equipment and specialty vehicles that require climate control,
- insufficient locker room space for current staffing levels,
- inadequate kitchen/lunchroom facilities to support staffing levels,
- insufficient parking space for current employees, and
- access roads for large maintenance vehicles (current location is in a residential neighborhood).

In 2024, the City contracted with HDR to complete an evaluation of network, control system, cyber and physical security. Recommendations from this study further emphasized the need for secure access to the control room, a separate room for network and server racks that is secure with an air conditioning system that can handle the load from network equipment, and purpose-fit operator workstations.

The 2020 Wastewater Treatment Facilities Master Plan recommended a remodel and expansion of the existing Administrative Building to accommodate additional storage and office space at a cost of \$2,500,000 (2021 estimate basis). Considering the existing Administration Building has already been retrofitted and will require building a new MCC room/building, and that the current location of the Collections Maintenance Building is inadequate, the City would like to consider building a new administration and maintenance building(s) on the Persigo wastewater treatment plant property. The City would also like to assess whether the existing Administration Building can be repurposed for warehouse and/or specialty vehicle garage space.

The City would like to complete programming for this project by July 2025 followed by design completion by March 2026. Construction would be initiated by May 2026 with an anticipated March 2027 occupancy date.

- 4.2. Scope of Services:** Professional licensed architect/engineer to provide programming, design and construction assistance services for the construction of a new Administration/Maintenance Building. Programming services will include facilitating discussions with City staff to understand space requirements for the project and
