DESCRIPTION DEERY 115 is a hot applied, single component, elastically modified composition of asphalt cement, virgin synthetic polymer and other modifiers. The sealant contains no solvent, is pre-reacted and conforms to the requirements of various modified ASTM standards. Material is tested for low temperature flexibility at -15 °F (-26 °C). VOC = 0 g/l.

USE DEERY 115 is a moderately low viscosity pavement preservation sealant intended for highway, street, and aviation applications for sealing longitudinal and transverse joints and random cracks in Asphalt or Concrete pavements where a free-flowing material is desirable. Properly installed, DEERY 115 is an effective barrier against damage from debris and moisture infiltration into cracks and joints within regions experiencing moderate high and low pavement temperatures.

HEATING and APPLICATION Sealant shall be heated in a hot-oil jacketed Melter capable of constant mechanical agitation and equipped with a calibrated thermometer to monitor sealant temperature. Material shall be heated to and maintained at the Minimum Application Temperature during use. Material can be cooled and then reheated, but only if prolonged heating is avoided. Prolonged heating at or above Minimum Application Temperature may severely damage the product. If overheating damage occurs, immediately drain the machine completely and refill with new material. DEERY 115 is pre-reacted and can be applied immediately after heating to Minimum Application Temperature. With pavement temperature at 40 °F (4 °C) or higher, place material into clean, dry crack or prepared reservoir by means of a hand-held pour pot, wheeled push bander or wand applicator. Squeegee any excess sealant tight to pavement surface. Pavement may be warmed to 40 °F (4 °C) or higher with a Hot Air Lance. For more details on heating and application, refer to the **Installation Instructions - Hot Applied Sealant** sheet which is included with each pallet of product. Specific Gravity of DEERY 115 sealant is 1.24.
