RE: Arrangements with Local Authorities for LOWE'S OF GRAND JUNCTION, CO

Dear Fire Chief Ken Watkins:

The purpose of this letter is to comply with the Federal regulation, 40 CFR 262.16(b)(8)(vi), as well as applicable state hazardous waste regulations. These regulations require generators of hazardous waste to attempt to make arrangement with local authorities, so they are aware of the potential need for future emergency services support. The updated Federal regulation allows the contact to be made with the Local Emergency Planning Commission (LEPC) as appropriate.

The Lowe's Home Centers, LLC. store #1554 is located at 2525 RIMROCK AVE, GRAND JUNCTION, CO. Lowe's is a warehouse-style home improvement/hardware store that sells a variety of retail products. In addition to multiple emergency exits, Lowe's stores typically have two large main entrance/exits at the front of the building, a customer loading area in front of the lumber area, and a garden center with multiple entrances/exits. Personnel work throughout the building and are trained in emergency procedures and waste handling.

At times, this facility may be a small quantity generator (SQG) of hazardous waste. The hazardous waste that may be generated consists of retail-packaged chemical products that are damaged, spilled on site, or returned by customers. Hazardous waste handled at the facility may include the following: aerosols, flammable liquids and solids, bulk fuels (gasoline and diesel), corrosive acidic liquids and solids, corrosive basic liquids and solids, bleach, oxidizing liquids, oxidizing pool chemical solids, toxic liquids and solids, organic peroxide, broken bulbs, lighters, leaking lead acid batteries, damaged lithium batteries, epoxy resin kits, corrosive inorganic liquids and MAPP and oxygen gas cylinders. Additional hazardous wastes may be present onsite depending on changes in types of retail products sold at the facility. A third-party waste vendor routinely picks-up hazardous waste at the facility on a 90 to 120-day schedule. Volumes of hazardous waste are not expected to exceed SQG thresholds.

The site contact at this facility is the *Department Manager of Loss Prevention*, who can be reached at (970) 683-4760. If the *Department Manager of Loss Prevention* is unavailable, the *Manager on Duty* can be utilized as a back-up. Please sign and return this document to the Mooresville, NC address listed below, certifying that you have received and reviewed this local authority notification for arrangement. If you have any questions regarding this request, please let us know. Thank you.

Sincerely,

Brian C. Mullen
