21. General architectural description: This is a simple wood frame house with a very low pitched side gable roof. The ridge runs east/west and the principal façade faces north. The principal façade has a large picture window, flanked by pairs of casements, near the center of the wall. A horizontally proportioned slider window sits near the right end of the wall. A large rectangular chimney sits on the roof plane near the centerline of the wall. A carport extends off the east side of the house and the roof slope extends slightly on the right side of the façade and runs to the end of the carport. The carport roof is supported by four pipe columns and the roof ends near the line of the main peak, creating a simple shed roof form over the carport. Board and batten siding infills the back plane of the carport. An entry door is located at the rear of the carport.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: A few shrubs front the house and a large street tree is located on the edge of the lot. A driveway runs to the carport, otherwise the yard is predominantly lawn.
24. Associated buildings, features, or objects: none

39. Area(s) of significance: Architecture, Community Development and Planning

40. Period of significance: 1956; 1943 to 1957 Uranium Boom

41. Level of significance: National  State  Local

42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier

(page 4 of 4)

development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: Alterations have had a moderate impact on the integrity.
