21. General architectural description: This is a simple rectangular wood frame house with a moderately pitched hipped roof. The ridge runs north/south and the principal façade faces east. The principal façade has a large picture window, flanked by casements, generally centered on the façade. To the right is a single horizontally proportioned window also flanked by casements. To the left is a large void area that creates a carport under the main roof form. The roof is supported by five pipe columns along the south side. The main entry is located in a recess along side the carport area. Three steps run from grade up to the porch area, which begins at the main wall plane. The concrete porch runs along the wall to the back of the recessed area. A pair of casements sit on the street facing wall and the main entry door faces south in the recess. The principal façade has a brick wainscoting that engages the large picture window. The wall above the brick is infilled with plywood siding with vertical lines. An enclosed porch extends off the rear of the house.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: The wide driveway runs to the carport and along the south side of the house. Several shrubs front the house, otherwise the yard is predominantly lawn.
24. Associated buildings, features, or objects: A large garage is located behind the carport.

39. Area(s) of significance: Architecture, Community Development and Planning

40. Period of significance: 1953; 1943 to 1957 Uranium Boom

41. Level of significance: National State Local

42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass

(page 4 of 4)

produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: Alterations have had a minor impact on the integrity.
