21. General architectural description: This is a long rectangular wood frame house with a low pitched hipped roof. The main ridge runs east/west and the principal façade faces south. Centered on the length of the main wall is a brick projection with a large picture window, flanked by double hungs. To the left of the projection is the main entry door. A low brick planter begins on the far side of the concrete landing at the door and runs west to the end of the main wall. The planter is set flush with the face of the brick projection. A single double hung window is located on the southwest corner and a similar unit sits around the corner on the west wall. A single double hung, a door and a group of three casements sit on the main wall to the right of the brick projection. The roof eave remains constant across the façade, creating a varied overhang. The south hipped roof plane jogs back in a line with the secondary door. The brick projection has a band of contrasting brick which runs across the wall from the window sill down to the grade.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: A large are of paving is located on the east side of the house and a post and rail fence runs around the perimeter. Several shrubs and planting beds front the house, otherwise the yard is lawn.
24. Associated buildings, features, or objects: A front gable garage is located on the east side of the lot near the front.

 Does not meet any of the above National Register criteria
39. Area(s) of significance: Architecture, Community Development and Planning
40. Period of significance: 1955; 1943 to 1957 Uranium Boom
41. Level of significance: National State Local
42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass

(page 4 of 4)

produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: Alterations have had a serious impact on the integrity of the house.
