21. General architectural description: This is a rectangular wood frame house with a side gable roof. The main ridge runs east/west and the principal façade faces south. The roof has minimal overhangs on the eave ends and a deeper variable overhang on the principal façade. The variation is a result of a combination of areas of extended roof plane and wall projections below. At the west side the wall projects forward of the main façade and has a large picture window flanked by double hungs, centered on its length. The main entry door is located adjacent to the east side wall of the projection; the eave line remains continuous, creating a deep overhang at the door and adjacent picture window. The picture window to the east has a narrow double hung to each side; to the east of the window the roof returns to a smaller overhang. A pair of double hungs are centered on the remainder of the wall. The double hung windows have a single horizontal muntin in each sash. A band of stone veneer runs across the façade at the window sills on the east and steps up at the entry door continuing the full height around the projection and on to the west side. Two double hung windows are located on the east side near the center. A front gable carport sits at the rear of the east wall, and a low pitched gable addition extends the west wall to the south.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: A large street tree sits on the front of the lot with a driveway on the east side runs to the rear. Several shrubs front the house and the yard is otherwise lawn.
24. Associated buildings, features, or objects: none

proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: Additions have somewhat compromised the integrity of the building.
