21. General architectural description: This is a rectangular wood frame house with a primarily hipped roof. The main ridge runs east/west with small gables exposed at the ends of the ridge. The principal façade faces north. The roof has moderate overhangs on all sides and a variable overhang on the principal façade. The variation is a result of a combination of areas of extended roof plane and wall projections below. At the west side the wall projects forward of the main façade and has a picture window with a double hung on each side, centered on its length. The main entry door is located adjacent to the east side wall of the projection; the eave line remains continuous, creating a deep overhang at the door and adjacent picture window. The picture window to the east has a narrow double hung to each side; to the east of the window the roof returns to a smaller overhang. A section of contrasting vertical siding fills the space between the picture window and the entry door, from the sill up to the soffit. A pair of double hungs are centered on the remainder of the wall. The double hung windows have a single horizontal muntin in each sash. A long addition extends off the eastern side of the rear of the house.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: Several shrubs front the house and two significant street trees bracket the façade. A driveway is located in front of the door and projecting wall area, the remainder of the yard is lawn.
24. Associated buildings, features, or objects: A shed is located at the rear of the site.

 Does not meet any of the above National Register criteria
39. Area(s) of significance: Architecture, Community Development and Planning
40. Period of significance: 1949; 1943 to 1957 Uranium Boom
41. Level of significance: National  State  Local
42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the

earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: The loss of the original garage and the large addition at the rear have moderately impacted the integrity.
