21. General architectural description: This is a rectangular wood frame house with a side gable roof. The main ridge runs east/west and the principal façade faces south. The roof has minimal overhangs on the eave ends and a deeper variable overhang on the principal façade. The variation is a result of a combination of areas of extended roof plane and wall projections below. At the west side the wall projects forward of the main façade and has a single door with an adjacent double hung window, centered on its length. The main entry door is located adjacent to the east side wall of the projection; the eave line remains continuous, creating a deep overhang at the door and adjacent picture window. The picture window to the east has a narrow double hung to each side; to the east of the window the roof returns to a smaller overhang. A pair of double hungs are centered on the remainder of the wall. The double hung windows have a single horizontal muntin in each sash. A stone veneer base runs across the façade and around the projection at the height of the main picture window sill. A pair of double hungs are located on the west side, and a small window unit is located on the east. Two additions extend off the rear, creating a stepped U shape.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: Two street trees front the yard and several shrubs are located at the façade. A driveway runs up to the projection and the remainder of the yard is lawn.
24. Associated buildings, features, or objects: A garage is located at the rear.

41. Level of significance: National ___ State ___ Local X
42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the

earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.

43. Assessment of historic physical integrity related to significance: Alterations have somewhat impacted the integrity of the building.
