21. General architectural description: This is a rectangular masonry house with a side gable roof. The main ridge runs east/west and the principal façade faces south. The roof has minimal overhangs on the eave ends and a deeper overhang on the principal façade. At the west side a single car garage door is centered on an area of wood siding. The main entry door is located adjacent to the garage door and has a large picture window to the right. The picture window has a narrow double hung to each side and a pair of double hungs are centered on the remainder of the wall. The double hung windows have a single horizontal muntin in each sash. Two double hung windows are located on the east side, and the gable ends are infilled with horizontal siding.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: A large street tree sits at the front, adjacent to the driveway. A large area of lawn fills the remainder of the yard.
24. Associated buildings, features, or objects: A shed sits off the side of the house and a large garage is in the rear yard.

39. Area(s) of significance: Architecture, Community Development and Planning

40. Period of significance: 1951; 1943 to 1957 Uranium Boom

41. Level of significance: National State Local

42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.
