21. General architectural description: This is a simple rectangular wood frame house with a moderately pitched side gable roof. The ridge runs north/south and the principal façade faces west. The roof has a minimal overhang on the gable ends, but a longer overhang on the front eave. The entry door is located on the north end with a couple concrete steps up to the door. A large window group is located to the right of the door with two over three fixed and awning units. A single horizontally proportioned window is located further along the façade. The window heads align and are just below the level of the overhang soffit. The gable ends have a pair of small horizontally proportioned windows in the field of horizontal siding. The main façade is brick veneer which extends off the south end about 3' long and 4' tall.
22. Architectural style/building type: Ranch Type
23. Landscaping or special setting features: The house sits on a almost the full width of a long narrow lot with a number of trees and shrubs, otherwise the yard is predominantly lawn.

39. Area(s) of significance: Architecture, Community Development and Planning

40. Period of significance: 1954; 1943 to 1957 Uranium Boom

41. Level of significance: National  State  Local

42. Statement of significance: The development in this area is a direct result of the nation's involvement in WWII and the drive for the development of nuclear weapons. The discovery of significant sources of Uranium in the region initiated development in Grand Junction that supported both the mining of the materials and the administration of programs related to the development of weapons. The building types, materials and neighborhood layout are all indicative of the national trends which were driven by the proliferation of the automobile and the enormous demand for single family homes. House designs departed from the romantic and revival styles that were prevalent in the earlier part of the 20th century and took on a California inspired design that was characterized by simple horizontally proportioned forms. Houses were typically mass produced on previously undeveloped tracts of land at the periphery of earlier development. These groups of houses were typically based on one or two plan types with a limited number of roof and exterior finish variations, further reinforcing the characteristics of mass production.
