Gentlemen:

Re: The Vineyards

This letter will confirm that sanitary sewage from the above referenced development will be accepted into the City-County system for treatment.

The collection system to be built by the developer will be accepted by the City for ownership, operation, and maintenance provided that the system is built to City standards and upon inspection and acceptance by the City.

Initially the sewage from this development may receive treatment at the Bluffs West Package Treatment Plant which is operated and maintained by the City. Ultimately the sewage will be diverted to the new regional treatment plant through interceptor lines to be constructed by the County.

Yours truly,

  
James E. Patterson, Jr.  
Utilities Director
