GRAND JUNCTION/MESA COUNTY, COLORADO PERSIGO WASH WASTEWATER TREATMENT PLANT May 19, 1981

It is requested that the Mesa County Commissioners establish policy on the following items:

A.) SERVICE AREA

Many requests for service to areas outside of the "201" area (especially north of I-70 between 20 and 24 Roads) are being received. A condition of the grant to construct the Persigo Wash Plant will be to identify the area to be served, estimate the amount of sewage to be generated in that area, and to explain how that additional capacity will be provided at the new plant.

The new plant is designed to serve only the area identified in the "201" plan. It is my recommendation that service to areas outside of the "201" boundary be held to an absolute minimum and that the area be clearly identified.

SANITATION DISTRICTS

The intent of the City and County jointly building a regional treatment plant is to prevent a proliferation of sanitation districts. The sanitation district may be an attractive (and perhaps the only) way for a developer or group of property owners to construct a local collection system.

It is my recommendation that the County Commissioners discourage sanitation districts and assist in the construction of collection systems by such methods of capital cost recovery agreements with property owners and developers. Lover fort

feer

Patterson's handoonk-at Commer's 5/19/81 meeting.

Notes: (1) 50% EPA Grant if New Funds Available in 1982

(2) With Four Additional 50% EPA Grants

(3) Without Any Additional EPA Grants

GRAND JUNCTION/MESA COUNTY, COLORADO PERSIGO WASH WASTEWATER TREATMENT PLANT

May 19, 1981

RECOMMENDATIONS:

- (1) Ask EPA for advance approval of both schedule A and B in anticipation of additional EPA grant funds in 1982.
- (2) Take bids on Persigo Wash plant including schedule A, schedule B and grant ineligible items. Delay notice to proceed on schedule B if EPA does not give advance approval.
- (3) Evaluate cost of immediate construction of schedule B as ineligible items versus cost of delayed construction with and without additional EPA grant.
- (4) Apply for EPA grants for schedule B (if construction delayed) and for Tiara Rado, W Goat Draw, and Scenic School Interceptors.
- 5:(5) Increase plant investment fee immediately from \$500 per EQU to \$750 per EQU.
 - (6) Follow monthly service fee schedule as projected in bonding report beginning in 1982.

(1) Growth rates in equivalent dwelling units forecast on population growth; projections assume a 5% growth rate through 1983; a 4.18% growth rate through 1989; and a 2.9% growth rate through 2005.

•

- (2) User charge increases are planned to insure net revenues, including the O&M reserve carry forward, cover debt service by at lease 1.6 times.
- (3) In 1979, tap fees for the City of Grand Junction's sower system totaled \$579,000. Conservative estimates are made here and and projected proportionate to the growth rates used for total equivalent dwelling units. No increase in tap fees are assumed.
- (4) The O&M reserve fund is capitalized from bond proceeds and maintained to meet any extraordinary O&M expense or an unexpected drop off in tap fees. It is intended to be replenished annually by increased user charges as necessary and carried forward to be accounted in the net system revenues available to pay debt service.
- (5) Net Debt Service is the principal and interest on the bonds plus any required deposits to the debt service reserve fund and less any earnings on the debt service reserve fund. The debt service reserve fund will grow to \$900,000 by 1990. The estimated interest rate on the bonds is 9.6743%.

(6) Excess is the net system revenues less debt service and less carry forward of the OGM reserve fund.

(7) Own costs in 1983 are increased significantly due to completion of the new treatment facility being built with the proceeds of the bonds.

(8) Final maturity will be paid in part by amount of debt service reserve fund, \$820,000.
