SECTION 4.0: SPECIFICATIONS/SCOPE OF SERVICES

- 4.1. General/Background:** The City of Grand Junctions operates the 12.5 million gallon per day rated Persigo Wastewater Treatment Plant (WWTP) and an extensive wastewater collections system consisting of approximately 588 miles of sewer lines and 29 lift stations. The City has received nuisance odor complaints that have been attributed to the Persigo WWTP and various locations within the collections system. The odor complaints vary in description, frequency, duration, and intensity. The City records limited documentation of the nuisance odor complaints that are received.

The original design and construction of Persigo WWTP included multiple Virotrol Scrubber systems for odor control which were utilized in the headworks, primary clarifier, and sludge blending buildings. The scrubbers were designed for use with a chemical oxidant (NaOCL, KMnO₄, H₂O₂, etc.) and included an oxidant neat tank, dilution tank, fan, mist nozzles, and a baffled scrubber. Shortly after installation one of the scrubbers was modified to treat sewer gases from the influent flume and gases released at the siphon just west of Persigo Wash, which were piped via a dedicated "sewer gas line" to the scrubber. However, within 5 years, by the mid-1980s, all the Virotrol Scrubbers systems were decommissioned because at that time nuisance odor complaints within the vicinity of the plant were minimal, the scrubber systems were unpleasant and costly to operate, and the scrubbers were limited in odor control effectiveness.

In 1995 with further improvements in 1998, a chemical feed station was constructed at 2549 River Road (approximately 5.5 miles upstream of Persigo WWTP) to feed ferrous chloride into the collections system. The ferrous chloride feed station was installed to mitigate odor issues and prevent hydrogen sulfide corrosion of the concrete interceptor between the feed station and Persigo WWTP. However, in recent years the interceptor between the ferrous chloride feed station and the Persigo WWTP has been CIPP lined which prevents hydrogen sulfide corrosion. Currently, the ferrous chloride is fed only to mitigate nuisance odors and keep atmospheric hydrogen sulfide levels low for staff safety in the headworks and primary clarifiers buildings at the Persigo WWTP. The original ferrous chloride chemical tanks were replaced in 2010 after 12 years of operation. The current tanks have been in-service going on 9 years and are approaching the end of their useful service life. Additionally, as shown in the attached document, the price of ferrous chloride has significantly increased in the last two years.

New odor control facilities will need to consider:

- Staff safety and health.
- Telemetry. Communication with the plant is important to monitor and control operations.
- Life cycle position of existing ferrous chloride feed station
- Potential current and future regulatory considerations for discharge limits at the WWTP such as alkalinity, TDS, and/or iron impacts.
- Potential presence of other odiferous compounds (e.g., mercaptans)
- Current air exchange rates in headworks and clarifier buildings.
- Plans for replacement of aeration blowers with more energy-efficient turbo blowers. Potential for foul air to be used for aeration air.

4.2. Project Objectives: The objective of this project is to perform an engineering investigation that will quantify the sources of odor and then identify and evaluate alternatives to provide odor control at the Persigo WWTP and within the wastewater collections system.

4.3. Special Conditions/Provisions:

- **Price/Fees:** Pricing shall be established as “a cost not to exceed price”, and shall be all inclusive, to include, but not be limited to: labor, materials, equipment, travel, drawings, engineering work, shipping/freight, licenses, permits, fees, etc.

Provide a not to exceed price using Solicitation Response Form found in Section 7, **accompanied by a complete list of costs breakdown.**

All fees will be considered by the Owner to be negotiable.

- **Proposed Schedule:**

1. June 2019, Task 1-3 of this RFP complete in preparation for 2020 budget setting process.
2. Winter of 2019, City advertises a RFP for Consultant selection to design and produce a construction package with plans and specifications that will address the odor issues within the Persigo Sewer system. Construction plans and specifications completed by the end of March 2020. (Not Part of this current RFP)
