*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN 0. TO 11.
THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.
THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN 1200. TO 2400.
THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.
THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN 0. TO 3.
THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.
THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN 0. TO 11.
THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.

THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

*** WARNING *** MODIFIED PULS ROUTING MAY BE NUMERICALLY UNSTABLE FOR OUTFLOWS BETWEEN 34. TO 3110.
THE ROUTED HYDROGRAPH SHOULD BE EXAMINED FOR OSCILLATIONS OR OUTFLOWS GREATER THAN PEAK INFLOWS.
THIS CAN BE CORRECTED BY DECREASING THE TIME INTERVAL OR INCREASING STORAGE (USE A LONGER REACH.)

Hydraulic Calculations
Detention Pond Summaries

Channel Flow for RL11bD - 9500 LF

Channel Calculator

Given Input Data:

Shape ..... Trapezoidal
Solving for ..... Depth of Flow
Flowrate ..... 38.0000 cfs
Slope ..... 0.0129 ft/ft
Manning's n 0.0350
Height ..... 5.0000 ft
Bottom width ..... 10.0000 ft
Left slope ..... 0.1670 ft/ft (V/H)
Right slope ..... 0.1670 ft/ft (V/H)

Computed Results:

Depth ..... 0.7723 ft
Velocity ..... 3.3647 fps
Full Flowrate ..... 1924.0930 cfs
Flow area 11.2936 ft2
Flow perimeter ..... 19.3766 ft
Hydraulic radius ..... 0.5828 ft
Top width ..... 19.2485 ft
Area 199.7006 ft2
Perimeter ..... 70.7095 ft
Percent full ..... 15.4451 %

Critical Information

Critical depth ..... 0.6656 ft
Critical slope ..... 0.0224 ft/ft
Critical velocity ..... 4.0823 fps
Critical area 9.3085 ft2
Critical perimeter ..... 18.0814 ft
Critical hydraulic radius ..... 0.5148 ft
Critical top width ..... 17.9710 ft
Specific energy ..... 0.9482 ft
Minimum energy ..... 0.9984 ft
Froude number 0.7744
Flow condition ..... Subcritical

Channel Flow for R_10uO - 4500 LF

Channel Calculator

Given Input Data:
- Shape ..... Trapezoidal
- Solving for ..... Depth of Flow
- Flowrate ..... 54.0000 cfs
- Slope ..... 0.0220 ft/ft
- Manning's n 0.0300
- Height ..... 5.0000 ft
- Bottom width ..... 10.0000 ft
- Left slope ..... 0.2500 ft/ft (V/H)
- Right slope ..... 0.2500 ft/ft (V/H)

Computed Results:
- Depth ..... 0.7734 ft
- Velocity ..... 5.3324 fps
- Full Flowrate ..... 2255.4790 cfs
- Flow area 10.1268 ft2
- Flow perimeter ..... 16.3777 ft
- Hydraulic radius ..... 0.6183 ft
- Top width ..... 16.1873 ft
- Area 150.0000 ft2
- Perimeter ..... 51.2311 ft
- Percent full ..... 15.4683 %

Critical Information
- Critical depth ..... 0.8576 ft
- Critical slope ..... 0.0151 ft/ft
- Critical velocity ..... 4.6882 fps
- Critical area 11.5183 ft2
- Critical perimeter ..... 17.0721 ft
- Critical hydraulic radius ..... 0.6747 ft
- Critical top width ..... 16.8610 ft
- Specific energy ..... 1.2153 ft
- Minimum energy ..... 1.2864 ft
- Froude number 1.1886
- Flow condition ..... Supercritical

Channel Flow for R_9.10 - 4500 LF

Channel Calculator

Given Input Data:

Shape ..... Trapezoidal
Solving for ..... Depth of Flow
Flowrate ..... 454.0000 cfs
Slope ..... 0.0220 ft/ft
Manning's n 0.0300
Height ..... 5.0000 ft
Bottom width ..... 10.0000 ft
Left slope ..... 0.2500 ft/ft (V/H)
Right slope ..... 0.2500 ft/ft (V/H)

Computed Results:

Depth ..... 2.3629 ft
Velocity ..... 9.8775 fps
Full Flowrate ..... 2255.4790 cfs
Flow area 45.9632 ft2
Flow perimeter ..... 29.4853 ft
Hydraulic radius ..... 1.5589 ft
Top width ..... 28.9035 ft
Area 150.0000 ft2
Perimeter ..... 51.2311 ft
Percent full ..... 47.2587 %

Critical Information

Critical depth ..... 2.7945 ft
Critical slope ..... 0.0110 ft/ft
Critical velocity ..... 7.6713 fps
Critical area 59.1816 ft2
Critical perimeter ..... 33.0440 ft
Critical hydraulic radius ..... 1.7910 ft
Critical top width ..... 32.3559 ft
Specific energy ..... 3.8791 ft
Minimum energy ..... 4.1917 ft
Froude number 1.3809
Flow condition ..... Supercritical

Channel Flow for R_L9T - 4100 LF

Channel Calculator

Given Input Data:

Shape ..... Trapezoidal
Solving for ..... Depth of Flow
Flowrate ..... 405.0000 cfs
Slope ..... 0.0110 ft/ft
Manning's n 0.0300
Height ..... 5.0000 ft
Bottom width ..... 5.0000 ft
Left slope ..... 0.4170 ft/ft (V/H)
Right slope ..... 0.4170 ft/ft (V/H)

Computed Results:

Depth ..... 3.5635 ft
Velocity ..... 8.3904 fps
Full Flowrate ..... 864.5854 cfs
Flow area 48.2696 ft2
Flow perimeter ..... 23.5176 ft
Hydraulic radius ..... 2.0525 ft
Top width ..... 22.0911 ft
Area 84.9520 ft2
Perimeter ..... 30.9823 ft
Percent full ..... 71.2700 %

Critical Information

Critical depth ..... 3.5647 ft
Critical slope ..... 0.0110 ft/ft
Critical velocity ..... 8.3858 fps
Critical area 48.2961 ft2
Critical perimeter ..... 23.5238 ft
Critical hydraulic radius ..... 2.0531 ft
Critical top width ..... 22.0969 ft
Specific energy ..... 4.6575 ft
Minimum energy ..... 5.3470 ft
Froude number 1.0007
Flow condition ..... Critical

Channel Flow for R21a - 2700 LF

Channel Calculator

Given Input Data:
- Shape ..... Trapezoidal
- Solving for ..... Depth of Flow
- Flowrate ..... 10.0000 cfs
- Slope ..... 0.0230 ft/ft
- Manning's n 0.0500
- Height ..... 5.0000 ft
- Bottom width ..... 30.0000 ft
- Left slope ..... 0.1670 ft/ft (V/H)
- Right slope ..... 0.1670 ft/ft (V/H)

Computed Results:
- Depth ..... 0.2079 ft
- Velocity ..... 1.5398 fps
- Full Flowrate ..... 2996.5641 cfs
- Flow area 6.4943 ft2
- Flow perimeter ..... 32.5237 ft
- Hydraulic radius ..... 0.1997 ft
- Top width ..... 32.4893 ft
- Area 299.7006 ft2
- Perimeter ..... 90.7095 ft
- Percent full ..... 4.1571 %

Critical Information
- Critical depth ..... 0.1496 ft
- Critical slope ..... 0.0693 ft/ft
- Critical velocity ..... 2.1630 fps
- Critical area 4.6231 ft2
- Critical perimeter ..... 31.8169 ft
- Critical hydraulic radius ..... 0.1453 ft
- Critical top width ..... 31.7920 ft
- Specific energy ..... 0.2447 ft
- Minimum energy ..... 0.2245 ft
- Froude number 0.6072
- Flow condition ..... Subcritical

Pipe Flow for RPD1 - 2550 LF

Manning Pipe Calculator

Given Input Data:
- Shape ..... Circular
- Solving for ..... Depth of Flow
- Diameter ..... 3.0000 ft
- Flowrate ..... 33.0000 cfs
- Slope ..... 0.0140 ft/ft
- Manning's n 0.0130

Computed Results:
- Depth ..... 1.3530 ft
- Area 7.0686 ft2
- Wetted Area 3.0939 ft2
- Wetted Perimeter ..... 4.4179 ft
- Perimeter ..... 9.4248 ft
- Velocity ..... 10.6661 fps
- Hydraulic Radius ..... 0.7003 ft
- Percent Full ..... 45.0992 %
- Full flow Flowrate ..... 78.9186 cfs
- Full flow velocity ..... 11.1647 fps

Critical Information
- Critical depth ..... 1.8645 ft
- Critical slope ..... 0.0047 ft/ft
- Critical velocity ..... 7.1307 fps
- Critical area 4.6278 ft2
- Critical perimeter ..... 5.4414 ft
- Critical hydraulic radius ..... 0.8505 ft
- Critical top width ..... 3.0000 ft
- Specific energy ..... 3.1209 ft
- Minimum energy ..... 2.7968 ft
- Froude number 1.8472
- Flow condition ..... Supercritical

Pipe Flow for R23b - 1000 LF

Manning Pipe Calculator

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 3.0000 ft
Flowrate ..... 101.0000 cfs
Slope ..... 0.0140 ft/ft
Manning's n 0.0109

Computed Results:

Depth ..... 2.7575 ft
Area 7.0686 ft2
Wetted Area 6.7997 ft2
Wetted Perimeter ..... 7.6952 ft
Perimeter ..... 9.4248 ft
Velocity ..... 14.8537 fps
Hydraulic Radius ..... 0.8836 ft
Percent Full ..... 91.9180 %
Full flow Flowrate ..... 94.1231 cfs
Full flow velocity ..... 13.3157 fps

Channel Flow for R23c - 500 LF

Channel Calculator

Given Input Data:
- Shape ..... Trapezoidal
- Solving for ..... Depth of Flow
- Flowrate ..... 112.0000 cfs
- Slope ..... 0.0050 ft/ft
- Manning's n 0.0450
- Height ..... 5.0000 ft
- Bottom width ..... 10.0000 ft
- Left slope ..... 0.2500 ft/ft (V/H)
- Right slope ..... 0.2500 ft/ft (V/H)

Computed Results:
- Depth ..... 2.0843 ft
- Velocity ..... 2.9303 fps
- Full Flowrate ..... 716.8383 cfs
- Flow area 38.2214 ft2
- Flow perimeter ..... 27.1879 ft
- Hydraulic radius ..... 1.4058 ft
- Top width ..... 26.6748 ft
- Area 150.0000 ft2
- Perimeter ..... 51.2311 ft
- Percent full ..... 41.6869 %

Critical Information
- Critical depth ..... 1.3113 ft
- Critical slope ..... 0.0304 ft/ft
- Critical velocity ..... 5.6026 fps
- Critical area 19.9906 ft2
- Critical perimeter ..... 20.8131 ft
- Critical hydraulic radius ..... 0.9605 ft
- Critical top width ..... 20.4902 ft
- Specific energy ..... 2.2178 ft
- Minimum energy ..... 1.9669 ft
- Froude number 0.4316
- Flow condition ..... Subcritical

Pipe Flow for R23d - 1200 LF

Manning Pipe Calculator

Given Input Data:
- Shape ..... Circular
- Solving for ..... Depth of Flow
- Diameter ..... 2.0000 ft
- Flowrate ..... 20.0000 cfs
- Slope ..... 0.0050 ft/ft
- Manning's n 0.0111

Computed Results:
- Depth ..... 1.8075 ft
- Area 3.1416 ft2
- Wetted Area 2.9871 ft2
- Wetted Perimeter ..... 5.0215 ft
- Perimeter ..... 6.2832 ft
- Velocity ..... 6.6956 fps
- Hydraulic Radius ..... 0.5949 ft
- Percent Full ..... 90.3766 %
- Full flow Flowrate ..... 18.7346 cfs
- Full flow velocity ..... 5.9634 fps

Critical Information
- Critical depth ..... 1.6059 ft
- Critical slope ..... 0.0045 ft/ft
- Critical velocity ..... 7.1875 fps
- Critical area 2.7826 ft2
- Critical perimeter ..... 4.3534 ft
- Critical hydraulic radius ..... 0.6392 ft
- Critical top width ..... 2.0000 ft
- Specific energy ..... 2.4055 ft
- Minimum energy ..... 2.4089 ft
- Froude number 1.0448
- Flow condition ..... Supercritical

Pipe Flow for RWF_P2 - 1000 LF

Manning Pipe Calculator

Given Input Data:
- Shape ..... Circular
- Solving for ..... Depth of Flow
- Diameter ..... 3.0000 ft
- Flowrate ..... 86.0000 cfs
- Slope ..... 0.0100 ft/ft
- Manning's n 0.0108

Computed Results:
- Depth ..... 2.7390 ft
- Area 7.0686 ft2
- Wetted Area 6.7689 ft2
- Wetted Perimeter ..... 7.6284 ft
- Perimeter ..... 9.4248 ft
- Velocity ..... 12.7052 fps
- Hydraulic Radius ..... 0.8873 ft
- Percent Full ..... 91.3010 %
- Full flow Flowrate ..... 80.2851 cfs
- Full flow velocity ..... 11.3580 fps

Pipe Flow for R23e - 1500 LF

Manning Pipe Calculator

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 4.0000 ft
Flowrate ..... 179.0000 cfs
Slope ..... 0.0080 ft/ft
Manning's n 0.0100

Computed Results:

Depth ..... 3.6585 ft
Area 12.5664 ft2
Wetted Area 12.0479 ft2
Wetted Perimeter ..... 10.1941 ft
Perimeter ..... 12.5664 ft
Velocity ..... 14.8573 fps
Hydraulic Radius ..... 1.1819 ft
Percent Full ..... 91.4614 %
Full flow Flowrate ..... 167.0220 cfs
Full flow velocity ..... 13.2912 fps

Pipe Flow for R24_P - 3076 LF
Manning Pipe Calculator

Given Input Data:
Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 4.0000 ft
Flowrate ..... 192.0000 cfs
Slope ..... 0.0140 ft/ft
Manning's n 0.0123

Computed Results:
Depth ..... 3.6272 ft
Area 12.5664 ft2
Wetted Area 11.9766 ft2
Wetted Perimeter ..... 10.0844 ft
Perimeter ..... 12.5664 ft
Velocity ..... 16.0312 fps
Hydraulic Radius ..... 1.1876 ft
Percent Full ..... 90.6799 %
Full flow Flowrate ..... 179.6336 cfs
Full flow velocity ..... 14.2948 fps

Channel Flow for R24_O - 1506 LF

Channel Calculator

Given Input Data:
- Shape ..... Trapezoidal
- Solving for ..... Depth of Flow
- Flowrate ..... 192.0000 cfs
- Slope ..... 0.0190 ft/ft
- Manning's n 0.0300
- Height ..... 5.0000 ft
- Bottom width ..... 10.0000 ft
- Left slope ..... 0.0833 ft/ft (V/H)
- Right slope ..... 0.0833 ft/ft (V/H)

Computed Results:
- Depth ..... 1.2854 ft
- Velocity ..... 5.8736 fps
- Full Flowrate ..... 4616.4624 cfs
- Flow area 32.6886 ft2
- Flow perimeter ..... 40.9686 ft
- Hydraulic radius ..... 0.7979 ft
- Top width ..... 40.8617 ft
- Area 350.1200 ft2
- Perimeter ..... 130.4638 ft
- Percent full ..... 25.7078 %

Critical Information
- Critical depth ..... 1.3810 ft
- Critical slope ..... 0.0139 ft/ft
- Critical velocity ..... 5.2310 fps
- Critical area 36.7042 ft2
- Critical perimeter ..... 43.2716 ft
- Critical hydraulic radius ..... 0.8482 ft
- Critical top width ..... 43.1567 ft
- Specific energy ..... 1.8215 ft
- Minimum energy ..... 2.0715 ft
- Froude number 1.1577
- Flow condition ..... Supercritical

Pipe Flow for R24_P - 800 LF

Manning Pipe Calculator

Given Input Data:
- Shape ..... Circular
- Solving for ..... Depth of Flow
- Diameter ..... 4.5000 ft
- Flowrate ..... 13.0000 cfs
- Slope ..... 0.0140 ft/ft
- Manning's n 0.0130

Computed Results:
- Depth ..... 0.7222 ft
- Area 15.9043 ft2
- Wetted Area 1.6497 ft2
- Wetted Perimeter ..... 3.7096 ft
- Perimeter ..... 14.1372 ft
- Velocity ..... 7.8801 fps
- Hydraulic Radius ..... 0.4447 ft
- Percent Full ..... 16.0485 %
- Full flow Flowrate ..... 232.6784 cfs
- Full flow velocity ..... 14.6299 fps

Channel Flow for R24_O - 1506 LF

Channel Calculator

Given Input Data:
- Shape ..... Trapezoidal
- Solving for ..... Depth of Flow
- Flowrate ..... 13.0000 cfs
- Slope ..... 0.0190 ft/ft
- Manning's n 0.0300
- Height ..... 5.0000 ft
- Bottom width ..... 4.5000 ft
- Left slope ..... 0.0833 ft/ft (V/H)
- Right slope ..... 0.0833 ft/ft (V/H)

Computed Results:
- Depth ..... 0.4445 ft
- Velocity ..... 2.9738 fps
- Full Flowrate ..... 4145.4384 cfs
- Flow area 4.3715 ft2
- Flow perimeter ..... 15.2082 ft
- Hydraulic radius ..... 0.2874 ft
- Top width ..... 15.1713 ft
- Area 322.6200 ft2
- Perimeter ..... 124.9638 ft
- Percent full ..... 8.8892 %

Critical Information
- Critical depth ..... 0.4391 ft
- Critical slope ..... 0.0200 ft/ft
- Critical velocity ..... 3.0295 fps
- Critical area 4.2912 ft2
- Critical perimeter ..... 15.0801 ft
- Critical hydraulic radius ..... 0.2846 ft
- Critical top width ..... 15.0436 ft

ENGINEER'S CERTIFICATION

I hereby certify that this *Master Utility Report* (Plan) for the design of the Master Plan for the Grand Junction Regional Airport was prepared by me (or under my direct supervision) in accordance with the provisions of the *utility agencies* for the owners thereof. I understand that the City of Grand Junction does not and will not assume liability for utility facilities designed by others.

08/25/09

Mark J. Lovato, P.E. Date
State of Colorado No. 35184
(Affix Seal)

OWNER'S CERTIFICATION

The Grand Junction Regional Airport Authority hereby certifies that the utility facilities for the Grand Junction Regional Airport shall be constructed according to the design presented in this report. We understand that the City of Grand Junction does not and will not assume liability for the utility facilities designed and/or certified by our engineer. We understand that the City of Grand Junction reviews utility plans but cannot, on behalf of the Grand Junction Regional Airport, guarantee that final utility design review will absolve the Grand Junction Regional Airport Authority and/or their successors and/or assigns of future liability for improper design. We further understand that approval of the Master Plan does not imply approval of our engineer's utility design.

INTRODUCTION

A. Project Location

This project is located at the Grand Junction Regional Airport (see Vicinity Map in Appendix A). The airport is located northeast of the City of Grand Junction, CO in Mesa County, north of Interstate Highway I-70 approximately one mile, along Horizon Drive. The airport is bordered by Bureau of Land Management (BLM) property to the north and east, I-70 and the Highline Canal to the south and Road 27 ¼ to the west.

The project is in the south portion of Section 24, in the east half of a portion of Section 25, a portion of Section 30, a portion of Section 31, and a portion of the north west quarter of Section 32, Township 1 North, Ranges 1 East and West of the Ute Principal Meridian. The site is approximately 2,334 acres.

B. Site Description

The Grand Junction Regional Airport consists of commercial and general aviation buildings. The infrastructure consists of runways, taxiways, aprons, parking lots, buildings, roadway network and utility infrastructure to serve the operations at the airport.

I. EXISTING UTILITY SYSTEM

A. Existing Infrastructure

1. Water

Existing utility as-built/record drawings were first used to get an idea of the existing water system infrastructure. This existing system was then further verified by the Ute Water Conservancy District. In addition, field verification was used to further help identify the existing water infrastructure.

An existing 30-inch steel Ute Water Conservancy District supply pipeline runs from the southeast to the northwest across Runway 4/22. This 30-inch steel pipeline continues to the northwest beyond the end of Landing View Lane. Three airport water elevation Zones of infrastructure are created from this supply pipeline. One water system to the southeast, one to the northeast and another water system to the northwest supply water to the buildings on airport property. Each of these systems contains 8-inch to 12-inch pipeline mains to supply water to the buildings on the property. In addition, another non-airport system to the west, off of current airport property is supplied by an 18-inch water main that branches from the water supply pipeline. A map of the existing water infrastructure can be found in Appendix B.

2. Sanitary

The sanitary sewer system servicing the Grand Junction Regional Airport is a gravity system of 8-inch and 12-inch pipelines that exit off airport property to the southwest of the main entrance roundabout at Walker Field Drive and Horizon Drive. An existing sanitary sewer infrastructure map was created from existing utility as-built/record drawings which were verified by the City of Grand Junction and later field verified by Jviation personnel. One note, during field verification, is that the manhole on the southeast end of Aviators Way was not found and may be covered by asphalt millings. The manhole just to the north does show a pipe heading in that direction and the as-built/record drawings show a manhole in that location. The map of the existing sanitary sewer infrastructure can be found in Appendix C.

3. Communications

A map of each of the fiber optic and phone utilities was created from existing utility as-built/record drawings. This map was then sent to Chris Johnson at Qwest Communications for further verification. This map is located in Appendix D.

4. Gas and Electrical

Using existing utility as-built/record drawings, a map of the existing electrical utilities and a map of the existing gas utilities were created. John Price from Xcel Energy sent gas and electrical drawings that were used to create the Xcel Energy utilities in the existing gas and electrical utility maps. In addition, Steve Don at Grand Valley Power was contacted to verify Grand Valley Power utilities. Steve Don sent drawings showing Grand Valley Power's utility lines on the north side of 27 ¼ Road. The existing electrical utility map and existing gas utility map are located in Appendix D.

5. Cable TV.

A map of existing Cable TV utilities was created from existing utility as-built/record drawings. Contact with Jeff Valdez at Bresnan Communication was made for verification of existing Cable TV utilities. Jeff stated that Bresnan does not have any active facilities but that there was conduit put in while there was an open trench for future services. To date, the Bresnan Contractor has not made an as-built drawing of where the conduits were placed. A map of the existing Cable TV utilities from as-built/record drawings is located in Appendix D.

B. Existing Distribution Analysis

1. Existing Water Model Design

Water distribution system analysis is based on standards received from District Engineer Edward Tolen, P.E. of the Ute Water Conservancy District. The Grand Junction Regional Airport consists of many commercial and general aviation buildings. A map of the existing water model can be seen in Appendix B. Several scenarios were used in the analysis of the water distribution system including; static, average day, maximum day, maximum day + fire flow, and peak hour flows.

To depict the current conditions of the site, a static water model was created using pressures received from the Ute Water conservancy District and setting the pipeline elevations at an assumed depth of 5 feet below the existing grade. This static scenario means that the water in the pipelines is not moving, but pressurized. Two Zones were identified by Ute Water at two connections to the steel water supply pipeline going through the site. Pressure reducing valves (PRV) locations and their settings were given by Ute Water at connections to the supply pipeline for each Zone. Reservoirs were then placed at each end of the steel water supply pipeline. Water elevations in the reservoirs were adjusted to achieve 140 to 145 psi (pounds per square inch), given by Ute Water in the 30-inch steel water supply pipeline. The PRV connection at Zone 1 to the northwest was given an 80 psi setting by the Ute Water Conservancy District. Due to pipeline variances and the model being set at a constant 5 feet below grade, this PRV was adjusted to 87 psi to get the required static 75 psi at node J-17, given by Ute Water. For this same reason, the Zone 2 PRV was adjusted from the given 105 psi to 98 psi, to achieve the required static 85 psi at node J-42.

Average day demands were then calculated using the 2008 Colorado Department of Transportation's Economic Impact Study of the Grand Junction Regional Airport. There are 6,125 jobs generated by the airport according to the study. This seems to be a conservative number, because some of these jobs may not be located on airport property. The Ute Water Conservancy District standard for demands is 15 gallons per day per employee (gpd/employee). Converting this demand to gallons per minute (gpm) gives 0.01 gpm/employee. This number was multiplied by the 6,125 jobs and was distributed at 1.8 gpm over 34 nodes that were adjacent to buildings within the water model of the site. In addition, using current enplanement forecasts, a high estimated passenger enplanement forecast of 405,990 passengers in the year 2027, was used, to be conservative for the analysis of the system. Dividing the 405,990 passengers by 365 days resulted in 1,112 passengers per day. This number was multiplied by the .01 gpm and distributed at an additional 5.56 gpm over node J-13 and also 5.56 gpm over node J-14, which is adjacent to the terminal.

Maximum day demands for the Grand Junction Regional Airport were calculated by multiplying the average day demand by a peaking factor of 2.0, while peak hour demands were calculated by multiplying the average day demand by a peaking factor of 2.50.

Grand Junction Fire Department was contacted to determine the required fire flows to the airport. It was determined from Appendix B of the 2006 Edition of the International Fire Code that a 2,000 gpm fire flow can be used for buildings that have approved automatic fire sprinkler systems. There are a few buildings on the airport that have high expansion foam fire suppression systems. At these nearest adjacent nodes, J-42 and J-58, it was determined by the Grand Junction Fire Department that a 6,000 gpm fire flow would not be unreasonable. Therefore, a 2,000 gpm fire flow was placed on the entire system except at the two nodes where a 6,000 gpm fire flow was used.

Existing average day demand, maximum day demand, and peak hour demands for each node are shown in the WaterCAD report printout, located in Appendix B.

2. Existing Water Model Analysis

In all scenarios, the pressure in the water supply line was between 140 psi and 145 psi. This includes nodes J-7, J-8 and J-31. These junctions will not be reported in the analysis of each scenario for high pressure, because they will consistently be the high pressure nodes.

In the static scenario, the WaterCAD analysis calculated the lowest pressure to be 70.8 psi at node J-20 and the maximum pressure as 101.9 psi at node J-33. These pressures are within a reasonable pressure range, although pressures over 90 psi may need a pressure reducing valve (PRV) on the service to the existing buildings.

Next, with average day demands, the WaterCAD analysis calculated pressure ranges to be 70.8 psi at node J-20 to 101.9 psi at node J-33. The maximum velocity in the system was 0.12 fps. Once again, pressures seem to be within a reasonable pressure range and velocities were below the maximum 10 fps (feet per second).

The Maximum Day Demand of 2 times the average demand was applied at all nodes in the model. The WaterCAD analysis calculated a minimum pressure to be 70.8 psi at node J-20 and the maximum pressure as 101.9 psi at node J-33. Flow velocities were at a maximum 0.25 fps which is less than 10 fps per Ute Water Conservancy District requirements.

Also, a Maximum Day Demand plus fire flow demand was applied to the model. Only nodes J-23, J-24, J-26, J-27 and J-28 did not meet the fire flow, with a residual of 20 psi. The fire flow at these north junctions, with a required 20 psi residual pressure, ranged from 1,890.71 gpm to 1,997.33 gpm. It should be noted that WaterCAD systematically applies a designated fire flow to every node in the system. The pipe velocity is not reflected in the "WaterCAD Fire Flow report." In order to assure that the system met the maximum velocity requirements, a fire flow was manually entered at nodes in the systems, which are typically worst case scenarios. Specifically, nodes J-14, J-26, J-42, J-53, J-55 and J-58 were

tested. Pipe velocities for fire flows at 2,000 gpm were under 12.93 fps. At nodes J-42 and J-58 with 6,000 gpm fire flows there was one pipe, P-59, that had a 28.36 fps velocity and the rest of the pipes were under 17.27 fps. These were a little above the targeted 10 fps velocity requirements from the Ute Water Conservancy District. The Ute Water Conservancy District is aware that some existing fire flow velocities are above the targeted maximum 10.0 fps.

For the last scenario, the Peak Hour Demand, the WaterCAD analysis calculated pressures ranging from 70.8 psi at node J-20 to 101.9 psi at node J-33. Flow velocities were below 0.31 fps, which is less than the maximum of 10.0 fps allowed by the Ute Water Conservancy District.

3. Existing Sanitary Sewer Analysis

Sanitary sewer design is based on the City of Grand Junctions Sanitary Sewer Regulations, provided by Bret Guillory, PE, CM. Light commercial average day sanitary sewer flow rates at 175 gallons per acre per day (gpad) were used for analysis of the Grand Junction Regional Airport.

All sanitary sewer pipes were analyzed for peak flows. Peak flows are determined by multiplying the Average Day Flow (ADF) by a Peaking Factor (PF). The peaking factor for the City of Grand Junction is 2, except in areas of heavy flow, in which case a PF of 4 was used. For analysis of this existing system, a PF of 2 was used everywhere except Design Points 10, 13 and all points downstream, a PF of 4 was used. A PF of 4 was used at Point 10 for all of the people passing through the terminal every day. Similarly, a PF of 4 was placed on Point 13 because that is the location where the airlines drain their sanitary sewer plane capture systems into the existing system.

The average day flows and peak flows for the existing sanitary sewer system are summarized in Appendix C. The sanitary sewer system within the Grand Junction Regional Airport is serviced mostly with 8-inch, 10-inch and 12-inch sewer mains. It appears there are some existing pipes that are at less than the City of Grand Junction standard of 0.4% minimum slope in certain locations. The first location is between Design Points 4 and 5. There also appear to be some shallow slopes between Design Points 9 and 11. These slopes were calculated from information received from field measurements, City of Grand Junction Regional Airport GIS Sewer Map information, and some existing survey data. Minimum and maximum slopes were used for the analysis of some of the existing sanitary sewer system, for which data could not be obtained. Refer to Appendix C for a detailed analysis of the existing sanitary sewer system with a spreadsheet and data calculations for the Grand Junction Regional Airport. Pipes were less than the 80% full requirement by the City of Grand Junction. The maximum percent full calculated for the pipes is 30.5%. Maximum velocity was 4.20 fps (feet per second), which is well below the maximum 10 fps required.

Minimum velocities were at 0.41 fps which is below the targeted 2.0 fps. Pipes that are at the beginning of sanitary sewer pipe runs usually do not have enough flow to achieve the 2.0 fps velocity even with a maximum slope. Also, these velocities do not take into consideration the momentum of steeper slope velocities going into shallower slopes.

Refer to Appendix C for 2008 AutoCAD Civil 3D Land Desktop Companion, Hydrology Through Circular Pipe, Sanitary Sewer Calculation Data.

II. PROPOSED UTILITY SYSTEM

A. Proposed Infrastructure

1. Water

There are three areas defined for future development at the Grand Junction Regional Airport. Proposed 12-inch water loops were created in two of these development areas to the northwest and southeast. In addition, the loop to the northwest will be connected to an existing pressure reducing valve stub located at approximately RW 11/29 and 27 ¼ Road. A 12-inch water main is proposed to loop from the south across Runway 11/29 to the northeast. A 16-inch water main loop will then head northwest paralleling Runway 11/29 before crossing perpendicularly on the north side and heading west back to the 30-inch water supply pipeline. Two new pressure reducing valves will be needed on the northeast loop. One pressure reducing valve will need to be located at approximately RW 11/29 and 27 ¼ Road and the other on the south side of the loop somewhere between zones 3 and 2 as shown on the map in Appendix E. The loop to the northeast of the runway was at a higher elevation and created a third proposed Zone. All proposed mains are for analysis of the proposed development areas and are not exact locations of where the mains need to be placed. A map of the proposed system can be seen in Appendix E.

2. Sanitary

Currently, there are proposed 8-inch sanitary sewer stubs into the proposed developed area, as seen on the proposed sanitary sewer map in Appendix F. Proposed sanitary sewer may need to drain into the neighboring system or require a pump if the proposed developed area grading does not permit gravity flow into the existing Grand Junction Regional Airport sanitary sewer system. The proposed Grand Junction Regional Airport future development area to the north of Runway 11/29 is elevated above the existing system and should be able to gravity feed into the existing sanitary sewer system.

3. Communications

A map of each of the fiber optic and phone utilities was created from existing utility as-built/record drawings. This map with future development areas was then sent to Chris Johnson at Qwest Communications to see if Qwest could supply these areas. His response

was that Qwest would be able to supply these areas, but from where would depend on what exactly was being built in the areas. A map of these utilities can be found in Appendix D.

4. Gas and Electrical

Gary Lewis with Xcel Energy was sent maps showing existing utilities and showing the future development areas to see if Xcel Energy could supply gas and electricity into these areas. His response was that Xcel would be able to supply these areas, but there may need to be existing upgrades depending on what exactly was being built in the areas. He also stated that Xcel would only be able to provide electricity up to the boundary with Grand Valley Power. In addition, Steve Don at Grand Valley Power was contacted to see if they could supply electricity for the future development areas within their boundary. His response was that Grand Valley Power would be able to supply the future development areas within their boundary of service, but depending upon the size of the facilities, system upgrades to increase capacity may require a contribution in aid of construction from the customer. A map of these utilities can be found in Appendix D, along with an exhibit showing the boundaries.

5. Cable TV.

Jeff with Bresnan Communication was sent maps showing existing utilities and showing the future development areas to see if Bresnan Communication could supply utilities into these areas. Jeff said they do not have any active facilities on airport property yet, but that there was pipe put in when there was an open trench for future services and Bresnan can supply their utilities. A map of these utilities can be found in Appendix D.

B. Proposed Distribution Analysis

1. Proposed Water Model Design

Water distribution system analysis is based on standards received from District Engineer Edward Tolen, P.E. with th Ute Water Conservancy District. The Grand Junction Regional Airport consists of many commercial and general aviation buildings. A map of the proposed water model can be found in appendix E.

Proposed water mains were added to the existing water model for a proposed water model analysis. Average day demands were placed on the proposed nodes at the same rates as the existing node demands. The existing system already used a future forecasted enplanement total for demands at the terminal, to be conservative. Similar to the existing analysis the same 2.0 and 2.5 maximum day and peak hour peaking factors were multiplied to the average day demand.

The Grand Junction Fire Department was contacted to determine fire flows for the project. It should be noted that a 6,000 gpm fire flow was placed on the proposed system. This was

a worst case scenario in case a proposed building needs the high expansion foam fire suppression system. This required a larger supply line into and around the future development areas.

Proposed average day demand, maximum day demand, and peak hour demands for each node are shown in the WaterCAD report printouts located in Appendix E.

2. Proposed Water Model Analysis

Similar to the existing analysis, in all scenarios, the pressure in the 30-inch water supply line was between 140 psi and 145 psi. This includes nodes J-7, J-8, J-31, J-122, J-123, J-125, J-127 and J-122. These junctions will not be reported in the analysis of each scenario for high pressure.

In the average day demands, the WaterCAD analysis calculated pressure ranges to be 70.8 psi at node J-20 to 104.3 psi at node J-121. The maximum velocity in the system was 0.29 fps. Pressures seem to be within a reasonable pressure range and velocities were below the maximum 10 fps. Individual pressure reducing valves might be required on services with pressures over 85 psi.

The Maximum Day Demand of 2.0 times the average demand was applied at all nodes in the model. The WaterCAD analysis calculated a minimum pressure to be 70.7 psi at node J-20 and the maximum pressure as 104.3 psi at node J-121. Flow velocities were at a maximum 0.57 fps which is less than 10.0 fps per the Ute Water Conservancy District requirements.

Also, a Maximum Day Demand plus fire flow demand was applied to the model. It should be noted that a 6,000 gpm fire flow was placed on the proposed nodes. This was a worst case scenario in case a proposed building needs the high expansion foam fire suppression system. All nodes, except J-103 and J-100, did meet the required fire flow with a residual pressure of 20.0 psi. J-100 is a representation of where the new proposed Air Traffic Control Tower is projected to be located, which will not have the high expansion foam fire suppression system. Junction J-103 is just at the edge of the proposed development area and had a fire flow of 5,935 gpm which is just about 6,000 gpm and should not be an issue. As with the existing analysis, in order to assure that the system met the maximum velocity requirements, a fire flow was manually entered at nodes in the systems, which are typically worst case scenarios. Specifically, nodes J-14, J-26, J-42, J-53, J-55, J-58, J-79, J-84, J-94, J-103 and J-121 were tested. Similar to the existing water model, node 58 with a 6,000 gpm fire flow resulted in Pipe P-59 having a 28.36 fps velocity. In the new proposed development areas to the northwest and southeast, velocities were about 15 fps in a couple of pipes. The velocities are higher than the targeted 10.0 fps velocity because the existing pipe sizes supplying these areas are sized smaller than the proposed pipe sizes, so flow is mostly coming from one direction through the proposed system. Required fire flows in the

proposed area to the northeast were all below the targeted 10.0 fps velocity from the Ute Water Conservancy District.

For the last scenario, the Peak Hour Demand, the WaterCAD analysis calculated pressures ranging from 70.6 psi at node J-20 to 104.2 psi at node J-121. Flow velocities were below 0.72 fps, which is less than the maximum of 10.0 fps allowed by the Ute Water Conservancy District.

3. Proposed Sanitary Sewer Analysis

Sanitary sewer design is based on the City of Grand Junction Sanitary Sewer Regulations, provided by Bret Guillory, PE, CM. Light commercial average day sanitary sewer flow rates at 175 gallons per acre per day (gpad) were used for analysis of the Grand Junction Regional Airport.

The proposed sanitary sewer pipes were added to the existing sanitary sewer analysis by adding the demand from the proposed future development areas. The average day flows and peak flows for the existing sanitary sewer system are summarized in Appendix F. Proposed 8-inch sanitary sewer mains were connected to the existing sanitary sewer system. The City of Grand Junction minimum and maximum slopes were used for the analysis of the proposed sanitary sewer system. Refer to Appendix F for a detailed analysis of the proposed sanitary sewer system with a spreadsheet and data calculations for Grand Junction Regional Airport. Pipes were less than the 80% full requirement by the City of Grand Junction. The maximum percent full calculated for the pipes is 72.0%. Maximum velocity was 6.42 fps, which is well below the maximum 10.0 fps required. Minimum velocities were at 0.41 fps which is below the targeted 2.0 fps requirement. Pipes that are at the beginning of sanitary sewer pipe runs usually do not have enough flow to achieve the 2.0 fps velocity, even with maximum slopes. Also, these velocities do not take into consideration the momentum of steeper slope velocities going into shallower slopes.

Refer to Appendix F for 2008 AutoCAD Civil 3D Land Desktop Companion, Hydrology Through Circular Pipe, Sanitary Sewer Calculation Data.

III. CONCLUSIONS

The Grand Junction Regional Airport Preliminary Utility Report was prepared in compliance with local utility agency guidelines. Water and Sanitary systems were analyzed more extensively than the other utilities. These utilities will need to be designed and approved by local utility agencies in proposed development areas. These agencies have been contacted and do have adequate supply to develop the proposed areas.

The existing water system does work, although additional looping of water mains might help with velocities and flows. In addition, when a pipe needs maintenance, valves can isolate the area and most of the system can still operate with the proper looping of water mains. The existing system is working and future development will have to be monitored. Future buildings might require approved sprinkler systems and possible upgrades to the existing system if the buildings will require high expansion foam fire suppression systems.

Existing sanitary sewer flows seem to be in working order. Future sanitary sewer mains will have to be monitored to make sure that the required minimum and maximum slopes are achieved. If velocities are between the 2.0 feet per second and 10.0 feet per second, then less maintenance and cleanouts will be needed for the system. There is available capacity in the existing system for future sanitary sewer development, however topography of the land will determine if it can gravity feed into the existing system. If not, then pumps can be installed or possibly other surrounding systems could convey the flow. In this case, an additional analysis would need to be completed.

GRAND JUNCTION REGIONAL AIRPORT
MASTER PLAN
EXISTING SANITARY SEWER MAP

DATE:3/09/09

Grand Junction Regional Airport

Sanitary Sewer Study Calculations
Design Point #37

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 10.0000 in
Flowrate ..... 99.5000 gpm-US
Slope ..... 0.0025 ft/ft
Manning's n 0.0130

Computed Results:

Depth ..... 3.0513 in
Area 0.5454 ft2
Wetted Area 0.1409 ft2
Wetted Perimeter ..... 11.7045 in
Perimeter ..... 31.4159 in
Velocity ..... 1.5735 fps
Hydraulic Radius ..... 1.7334 in
Percent Full ..... 30.5133 %
Full flow Flowrate ..... 491.6941 gpm-US
Full flow velocity ..... 2.0086 fps

Grand Junction Regional Airport

Sanitary Sewer Study Calculations
Design Point #37

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 10.0000 in
Flowrate ..... 24.9000 gpm-US
Slope ..... 0.0025 ft/ft

Critical perimeter ..... 3.0062 in
Critical hydraulic radius ..... 0.1830 in
Critical top width ..... 2.9267 in
Specific energy ..... 0.0312 ft
Minimum energy ..... 0.0349 ft
Froude number 0.8344
Flow condition ..... Subcritical

Grand Junction Regional Airport

Sanitary Sewer Study Calculations
Design Point #15

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 8.0000 in
Flowrate ..... 2.5000 gpm-US
Slope ..... 0.0500 ft/ft
Manning's n 0.0130

Computed Results:

Depth ..... 0.2695 in
Area 0.3491 ft2
Wetted Area 0.0036 ft2
Wetted Perimeter ..... 2.9532 in
Perimeter ..... 25.1327 in
Velocity ..... 1.5362 fps
Hydraulic Radius ..... 0.1768 in
Percent Full ..... 3.3682 %
Full flow Flowrate ..... 1212.7836 gpm-US
Full flow velocity ..... 7.7409 fps

Critical Information:

Critical depth ..... 0.4017 in
Critical slope ..... 0.0091 ft/ft
Critical velocity ..... 0.8481 fps
Critical area 0.0066 ft2
Critical perimeter ..... 3.6162 in
Critical hydraulic radius ..... 0.2615 in
Critical top width ..... 3.4907 in
Specific energy ..... 0.0591 ft
Minimum energy ..... 0.0502 ft
Froude number 2.2058
Flow condition ..... Supercritical

Grand Junction Regional Airport

Sanitary Sewer Study Calculations
Design Point #14

Given Input Data:

Shape ..... Circular
Solving for ..... Depth of Flow
Diameter ..... 6.0000 in
Flowrate ..... 4.9000 gpm-US
Slope ..... 0.0159 ft/ft
Manning's n 0.0130

Computed Results:

Depth ..... 0.5198 in
Area 0.1963 ft2
Wetted Area 0.0083 ft2
Wetted Perimeter ..... 3.5849 in
Perimeter ..... 18.8496 in
Velocity ..... 1.3194 fps
Hydraulic Radius ..... 0.3324 in
Percent Full ..... 8.6625 %
Full flow Flowrate ..... 317.5608 gpm-US
Full flow velocity ..... 3.6034 fps

Critical Information:

Critical depth ..... 0.6063 in
Critical slope ..... 0.0083 ft/ft
Critical velocity ..... 1.0520 fps
Critical area 0.0104 ft2
Critical perimeter ..... 3.8821 in
Critical hydraulic radius ..... 0.3849 in
Critical top width ..... 3.6164 in

Description: Grand Junction Regional Airport-Proposed and Existing Sanitary Sewer Study Calculations Table
AIP No: 3-08-0027-36
Date: 5-Feb-09
Designed by: SJH

Sanitary Sewer Demand Rates:
Average daily flows: Light Commercial 175 gallons per acre per day (gpad)
Peak Hour flows: 2.0 x Avg. flow
4.0 for higher uses (ie., motels/restaurants/terminal/Airline sewage drain location).

Design Point	Acres	Acres (CUMMULATIVE)	Demand Rate (GPAD)	Average Day Demand		Min. Slope (%)	Average Demand Velocity (FT/S) (Min. Slope)	Peaking Factor	Peak Flow		Max. Slope (%)	Peak Demand Velocity (FT/S) (Max. Slope)	Peak Demand (Min. Slope) % Full	Pipe Dia. Size (IN)

If the projected ultimate average flow for the planning area is less than 25 MGD, then additional areas can be added to the 201 Area without impacting the future plant design. If the projected flows exceed 25 MGD, existing service areas must either be deleted or projected land use modified to reduce the projected flows. Any land use modifications must be justified based on existing land use trends or other limiting factors.

Based upon the existing development and projected land use developed in the 1985 Sewer System Analysis and utilizing the flow criteria established in Table 3-3, the projected ultimate wastewater flow was 24.27 MGD. Additional areas added to the 201 Area since 1985 increased the projected flows to 24.62 MGD. The ultimate flows were estimated by adding the existing 1984 flows to the projected increase in flows for ultimate development from the previous report in 1985. Table 3-4 summarizes the 1984 and ultimate projected flows based on the 1985 Sewer System Analysis and Use.

TABLE 3-3
Grand Junction Comprehensive Wastewater Basin Study
Planning Criteria

WASTEWATER FLOW CRITERIA	
Residential (including 30 gpcd I/I allowance)	105 gallon per capita per day (gpcd)
Commercial	
Light business (B-1, B-2)	100 gallons per acre per day (gpad)
Light commercial (I-1, B-3, C-1, PB, PI, PE)	175 gallons per acre per day (gpad)
Industrial	
Heavy Industrial (I-2, C-2, H0)	350 gallons per acre per day (gpad)
Peak flow to average flow ratio	2.0
Residential density	2.5 persons per unit
INTERCEPTOR SEWER DESIGN CRITERIA	
Mannings pipe roughness factor, n	0.013
Flow depth ratio, d at peak flow (d/D), where D is pipe diameter (interceptor sewers) (outfall or sewer extensions)	1.0 0.80
Maximum sewer excavation depth for gravity line	20 feet
Sewer slopes Maximum (Based on 10 feet per second (fps) maximum flow velocity) Minimum (Based on 2 feet per second (fps) minimum flow velocity)	Sewer Diameter (inches) — Slope (%) max / min 8 — 5.00 / 0.40 10 — 4.00 / 0.25 12 — 3.00 / 0.20 15 — 2.50 / 0.15

GRAND JUNCTION REGIONAL AIRPORT MASTER PLAN
PROPOSED SANITARY SEWER MAP

DATE:3/09/09

If the projected ultimate average flow for the planning area is less than 25 MGD, then additional areas can be added to the 201 Area without impacting the future plant design. If the projected flows exceed 25 MGD, existing service areas must either be deleted or projected land use modified to reduce the projected flows. Any land use modifications must be justified based on existing land use trends or other limiting factors.

Based upon the existing development and projected land use developed in the 1985 Sewer System Analysis and utilizing the flow criteria established in Table 3-3, the projected ultimate wastewater flow was 24.27 MGD. Additional areas added to the 201 Area since 1985 increased the projected flows to 24.62 MGD. The ultimate flows were estimated by adding the existing 1984 flows to the projected increase in flows for ultimate development from the previous report in 1985. Table 3-4 summarizes the 1984 and ultimate projected flows based on the 1985 Sewer System Analysis and Use.

TABLE 3-3
Grand Junction Comprehensive Wastewater Basin Study
Planning Criteria

WASTEWATER FLOW CRITERIA				
Residential (including 30 gpcd I/I allowance)			105 gallon per capita per day (gpcd)	
Commercial				
Light business (B-1, B-2)			100 gallons per acre per day (gpad)	
Light commercial (I-1, B-3, C-1, PB, PI, PE)			175 gallons per acre per day (gpad)	
Industrial				
Heavy Industrial (I-2, C-2, H0)			350 gallons per acre per day (gpad)	
Peak flow to average flow ratio			2.0	
Residential density			2.5 persons per unit	
INTERCEPTOR SEWER DESIGN CRITERIA				
Mannings pipe roughness factor, n			0.013	
Flow depth ratio, d at peak flow (d/D), where D is pipe diameter (interceptor sewers) (outfall or sewer extensions)			1.0 0.80	
Maximum sewer excavation depth for gravity line			20 feet	
Sewer slopes			Sewer Diameter (inches)	Slope (%) max / min
Maximum	(Based on 10 feet per second (fps) maximum flow velocity)		8	5.00 / 0.40
			10	4.00 / 0.25
Minimum	(Based on 2 feet per second (fps) minimum flow velocity)		12	3.00 / 0.20
			15	2.50 / 0.15

Description: Grand Junction Regional Airport-Proposed and Existing Sanitary Sewer Study Calculations Table
AIP No: 3-08-0027-36
Date: 5-Feb-09
Designed by: SJH

Sanitary Sewer Demand Rates:
Average daily flows: Light Commercial 175 gallons per acre per day (gpad)
Peak Hour flows: 2.0 x Avg. flow
4.0 for higher uses (ie., motels/restaurants/terminal/Airline sewage drain location).

Design Point	Acres	Acres (CUMMULATIVE)	Demand Rate (GPAD)	Average Day Demand		Min. Slope (%)	Average Demand Velocity (FT/S) (Min. Slope)	Peaking Factor	Peak Flow		Max. Slope (%)	Peak Demand Velocity (FT/S) (Max. Slope)	Peak Demand (Min. Slope) % Full	Pipe Dia. Size (IN)

Appendix Three

STUDY COMMITTEE MEETING NOTES

Study Committee (SC) Meeting Notes

Grand Junction Regional Airport
Master Plan Update
January 15th, 2008

The meeting was held in the conference room at the Grand Junction Regional Airport. Meeting participants included Rex Tippetts and Amy Jordan (Airport), Mark McFarland, Ryk Dunkelberg and Ryan Hayes (BDC) and the Master Plan Study Committee Members.

Agenda

- Introduce Study Committee Members
- Present Master Plan Update Process Overview and Schedule
- Discuss Role and Purpose of Committee
- Airport Development Issues Discussion
- Comments and Questions from Study Committee
- Next Steps

Consultant Team

- It was explained to the committee that the consultant team for the AMP would include BDC, Leibowitz & Horton AMC and the selected engineering consultant for the Airport.

Planning Process

- The steps in the planning process were discussed.

Meetings/Presentations and Schedule

- A list of potential meetings and Airport Authority Board presentations was presented.
- A potential 12 to 18 month estimated schedule was presented.

Roles, Responsibilities and Expectations

- The roles of various groups were discussed including the Sponsor, the FAA, the Study Committee and the Consultant Team.

Issues Identification

- A preliminary list of issues to be studied in the Master Plan were presented and the Study Committee was asked to identify any additional issues to be considered.

Questions and Comments

- The City is updating its Comprehensive Plan in 2008, can we coordinate the plans? The Comp Plan is scheduled for completion in early 2009.
- The two primary concerns of the City are the planned land uses and traffic circulation in the vicinity of the Airport.
- Will the interior leaseable space in the terminal building be analyzed to determined highest/best use of space?

- Engine run-up areas or holding bays are needed at each end of Runway 11/29 for general aviation aircraft.
- Mesa County has several small air strips and helipads and an increased need for helipads due to the oil and gas industry, will the regional air transportation needs of the County be looked at in this Airport Master Plan?
- There is a need for additional commercial ramp space, particularly during Special Traffic Management Program (STMP) days when arrivals to other mountain airports like Aspen are diverted to GJT.
- The tentative date for the next SC meeting is April 15th, 2008. This meeting will be preceded by Working Paper 1.

Study Committee (SC) Meeting Notes

Grand Junction Regional Airport
Master Plan Update
April 15th, 2008

The meeting was held in the conference room at the Grand Junction Regional Airport. Meeting participants included Rex Tippetts, Amy Jordan and Lindsey Holman (Airport), Mark McFarland, and Ryan Hayes (BDC) and the following Master Plan Study Committee Members: Marisa Fay and Collin Fay (Colorado Flight Center), Teresa Gara (WestStar), Ann Driggers (Grand Junction Economic Partnership), Ereal Lewis Jr. (American Eagle), Phillip Smith (AVIS), Tim Hayashi and Linda Dannenberger (Mesa County), Lisa Cox (City of Grand Junction), PJ McGovern (P&L Properties).

Agenda

- Introductions
- Overview of the Master Plan Update Process
- Present Working Paper 1 (Inventory and Forecasts
- Comments and Questions from Study Committee
- Next Steps

Consultant Team

- It was explained to the committee that the consultant team for this planning study would include BDC, Leibowitz & Horton Airport Management Consultants and J3 Aviation Consultants.

Planning Process

- The planning process and where we are in that process was reviewed.

Meetings/Presentations and Schedule

- A list of potential meetings and Airport Authority Board presentations was presented.
- A potential 12 to 18 month estimated schedule was presented.

Inventory

- Inventory items including airport role, airport facilities, airspace and airport environs were discussed.

Forecasts

- The following forecast related items were presented and discussed
    - Regional Socioeconomic Conditions
    - Historical and Existing Airport Activity

- Passenger Enplanements Forecast
- Commercial Service Operations Forecast
- General Aviation Operations Forecast
- Air Cargo Activity Forecast
- Military Operations Forecast
- Based Aircraft Forecast
- Forecast Summary

Airport Reference Code (ARC)/Design Aircraft Analysis

- The design aircraft analysis for both runways was presented and explained.

Airport Planning Considerations

- An explanation of how the Inventory and Forecasts relate to the issues and goals for the Master plan Update was presented.

Questions and Comments

- Airport would like to provide the committee with copies of the existing Airport Layout Plan prior to the next meeting, potentially as a package with Working Paper 2.
- Mesa County is concerned with how roadway access would be provided to north side facilities and a relocated ATCT.
- Mesa County is interested in how projected airport improvements will impact transportation routes in the vicinity of the Airport including H Road, Horizon Drive, I-70, 29 Road, etc. and the potential demands placed on these routes with increased or relocated and expanded air cargo facilities.
- General aviation needs were expressed from several committee members.
  - GA numbers are constrained by lack of aircraft storage space. At least 6 aircraft owners wanting hangars right now.
  - A connection from east ramp to C1A is needed.
  - Small aircraft run-up areas at all runway ends are needed.
  - Improvements to the maintenance run-up area are needed.
- The FBO representatives indicated a need for increase heavy itinerant aircraft (over 100,000 pounds) parking space. The FBO is seeing a significant increase in diversion traffic and would like to be able to better accommodate these diversions.
- Airline representative also expressed concern about lack of heavy ramp space. American Airlines anticipates increase use of the Airport for diversions. Airline terminal needs include restaurant, better handicap terminal access and facilities and potentially a business center.
- Car rental representative stated that all rental car companies are forecasting significant growth in rental car activity for the next few years and their primary need is for increased space for parking cars. Potentially as much as four times the existing space will be needed.

- The City has many of the same interests and concerns as the County, including the transportation network, access to I-70 and the potential 29-Road interchange, etc. The City is also receiving development pressures northwest of the Airport and along 27 ¼ Road and want to be sure that it continues to help protect the Airport from incompatible development northwest of the Airport.
- FBO representatives reiterated that the maintenance and strengthening of the ramp is a very high priority short-term need.
- Discussion took place among the committee about the city property tax rule and the disincentive for long-term leases. The Airport indicated that most hangar lessee's pay more in property tax than they do in lease fees.
- Also discussion of the city sales tax on aircraft parts and its disincentive to aircraft parts manufacturing type business from relocating to GJT. (State and County exempt aircraft parts from sales tax).

Next Steps

- Demand/Capacity Analysis
- Facility Requirements Determination
- Prepare Preliminary Alternatives
- Prepare Recommended Development Plan
- Produce Working Paper 2
- Study Committee Meeting 3 (potentially July 15th, 2008)

Study Committee (SC) Meeting Notes

Grand Junction Regional Airport
Master Plan Update
August 5th, 2008

The meeting was held in the conference room at the Grand Junction Regional Airport. Meeting participants included Rex Tippetts, Amy Jordan (Airport), Mark McFarland, Ryan Hayes and Ryk Dunkelberg (BDC) and the following Master Plan Study Committee Members: Collin Fay (Colorado Flight Center), Ann Driggers (Grand Junction Economic Partnership), Owen Charrier (Mesa Air), Ereal Lewis Jr. (American Eagle), Phillip Smith (AVIS), Lisa Cox (City of Grand Junction).

Agenda

- Introductions
- Overview of the Master Plan Update Process
- Present Working Paper 2 (Revised Forecasts and Capacity Analysis and Facility Requirements)
- Planning Considerations and Alternatives Discussion
- Questions and Comments
- Next Steps

Planning Process

- The planning process and where we are in that process was reviewed.

Revised Forecasts

- The revised enplanement forecast scenario was explained.
- The revised forecast summary was explained.

Capacity Analysis

- The capacity analysis conclusions were discussed.

Facility Requirements

- The FAA dimensional requirements and non-standard conditions were discussed.
- Additional airside facility requirements were presented.
- Landside facility requirements were then presented.
- It was explained to the committee that the RVZ and gradient problems have not changed, but that the potential solution to the problem has changed.

Planning Considerations and Preliminary Alternatives

- The following planning considerations were discussed.
    - Maintenance and rehabilitation of Runway 11/29.
    - Correction of non-standard longitudinal and transverse gradients on Runway 11/29 and connector taxiways.
    - Correction of the non-standard Runway Visibility Zone (RVZ).
    - Potential ARC upgrade of Runway 4/22.
    - The continuation of efforts to acquire adjacent land.
    - Future relocation and siting of the ATCT.
    - Facilities to support Airport's evolving role (pax, cargo, GA).
    - Terminal and terminal area improvements.
    - Vehicular access to various airport development areas.
    - Regional ground transportation issues.
    - Areas programmed for future general aviation development.
    - Heavy ramp for itinerant & diverted traffic/run-up areas
    - Areas programmed for future non-aviation related development.
    - Instrument approach capabilities of both runways.
    - Off-airport land use compatibility and zoning.
- Two preliminary airside alternatives were presented to the committee and discussed.
    - Alternative One – Shift Runway 11/29 and upgrade Runway 4/22
    - Alternative Two – Relocate Runway 11/29 and do not upgrade Runway 4/22
- The study committee overwhelmingly supported Alterative Two.

Questions and Comments

- The City is considering early 2009 for completion of the Comprehensive plan and may have a preferred scenario as early as September. Lisa would like BDC to directly contact Winston Associates to facilitate the exchange of information about the 2 plans.
- The Mesa Air representative preferred Alternative two and does not want to have to operate on Runway 4/22 due to the fact that it is very rarely aligned with the winds. Additional concerns include the general layout of the terminal building and aircraft parking apron.
- The American Eagle representative is still concerned about a restaurant.
- The economic development representative is very concerned about having to shut down the airport to air carriers and likes alternative two due to its constructability while keeping the existing Runway 11/29 open. The landside development area opened up by Alternative 2 is also intriguing.
- The committee requested more aerial be shown to the east and west on the alternative graphics.

Next Steps

- Refine Airfield Development Alternatives

- Prepare Landside Development Alternatives
- Prepare Recommended Development Plan
- Produce Working Paper 3
- Study Committee Meeting 4
    - *Estimated meeting date: October 21st, 2008*

Study Committee (SC) Meeting Notes

Grand Junction Regional Airport
Master Plan Update
October 21st, 2008

The meeting was held in the conference room at the Grand Junction Regional Airport. Meeting participants included Ed Storer, Amy Jordan (Airport), Mark McFarland, Ryan Hayes and Ryk Dunkelberg (BDC), Linda Bruce (FAA) and the following Master Plan Study Committee Members: Collin Fay (Colorado Flight Center), Teresa Garner and Jesse Van Meter (West Star), Barb Bowman and Jennifer Grossheim Harris (Grand Junction Visitor and Convention Bureau), Linda Dannenberger (Mesa County), Ann Driggers (Grand Junction Economic Partnership), Phillip Smith (AVIS), Lisa Cox (City of Grand Junction).

Agenda

- Overview of the Master Plan Update Process
- Present Working Paper 3 (Development Concepts and Alternatives Analysis)
- Discussion of Next Steps
- Questions and Comments

Planning Process

- The planning process and where we are in that process was reviewed.

Development Assumptions

- One. The Airport will be developed and operated in a manner that is consistent with local federal and state regulations.
- Two. Accommodate commercial passenger service activity, along with general aviation activity and a small amount of military activity.
- Three. The size of aircraft is not expected to significantly change.
- Four. Accommodate aircraft operations with great reliability and safety.
- Five. Make most efficient use of the available area for aviation-related activities.
- Six. Enhance the compatibility of the operation of the Airport with the environs.
- Seven. Identify potential sites for future ATCT facilities.

Goals and Objectives for Development

- Provide effective direction for the future development.
- Help fulfill Airport mission to facilitate and enhance regional aviation services.
- Accommodate the forecast aviation activity levels in a safe and efficient manner.
- Accommodate a variety of general aviation activities.

- Plan and develop the Airport to be capable of accommodating the future regional needs and support regional economic development activity.
- Plan for potential property acquisition for approach protection and land use compatibility purposes.

Airside Alternatives

- Airside Alternative One – Runway Shift
- Airside Alternative Two – New Runway Minimum Separation
- Airside Alternative Three – New Runway Maximum Separation
- Engineer's opinion of probable costs for all three alternatives was discussed. From an order of magnitude perspective, the previous plan to shift Runway 11/29 and upgrade Runway 4/22 to air carrier standards (Alternative One) was only slightly less expensive than Alternative Two, Build New Runway. The committee was in agreement with the recommended preferred alternative (Airside Alternative Two). Both Airside Alternatives One and Two correct the non-standard Runway Visibility Zone (RVZ). However, only Airside Alternative Two corrects all the non-standard conditions associated with the longitudinal and transverse gradients on Runway 11/29 and its connector taxiways.
- The Airport's vision for Airside Alternative Two is to be able to phase the construction of the new runway over a number of years and keep the existing Runway 11/29 open to utilized by the passenger and cargo carriers during construction. This eliminates the need to upgrade Runway 4/22 to air carrier standards.
- The committee inquired about how the Airport would fund the construction of the new runway. Airport staff indicated that a combination of AIP entitlement and discretionary funding would be the most likely source and that discussions with FAA had already been initiated. More detail will be provided in the upcoming Implementation Program chapters.
- A discussion took place of the environmental documentation required to implement the preferred alternative.

Landside Development Concepts

- Landside Facilities, Conceptual Layout East
- Landside Facilities, Conceptual Layout West
- Conceptual General Aviation Facilities Layout
- Presentation of Conceptual Development Plan

Next Steps

- Prepare Detailed Airport Plans Set
- Prepare Environmental Review
- Prepare Implementation Program
- Prepare Draft Final Report

A. Introduction and Background

The Grand Junction Regional Airport (the Airport or GJT) has completed a number of planning studies in recent years including an Airport Master Plan in 2008 and a Terminal Area Plan in 2011. The 2008 Master Plan recommended a replacement of the primary runway (a $100 Million plus program) and consideration of a replacement passenger terminal building. A phasing plan for the replacement of the terminal building was then developed in the 2011 Terminal Area Plan. However, due to a number of changed conditions since 2011, further planning is required to address the lack of an identified improvement program for the existing terminal building. Because the 2011 Terminal Area Plan recommended replacing the terminal, routine and necessary maintenance and improvements to the existing building have been deferred in the years since. Given the current fiscal realities at the Airport associated with the replacement runway program and in the wake of a 2013 FBI investigation, it is likely that the existing terminal will need to be utilized for a longer period of time than was envisioned in the 2011 planning process.

This amendment to the 2011 plan also recognizes that these evolving issues and considerations are significant and cannot be addressed without a comprehensive examination of the Airport's long-term Capital Improvement Program (CIP). It should be noted that this study recognizes the other recently completed studies for the Airport. To the extent possible, the resources provided by those studies were utilized to minimize the work effort associated with this plan amendment.

The Airport has a number of other projects in-progress or scheduled in the near future, those include: 1) a fog seal and remark of the primary runway, 2) rehabilitation of Taxiway A connectors, 3) lighting and windsock relocation, 4) the land transfer with BLM for the replacement runway, 5) the engineering design of the replacement runway project, and 6) air carrier apron design modifications and reconstruction. Due to the strong interrelationship between projects, this study was developed in coordination with the Airport's engineering consultants and Airport Management.

2011 Terminal Area Plan Summary

The development of a Terminal Area Plan for GJT began after completion of the 2008 Airport Master Plan which recommended a replacement terminal program. The plan was initiated with an assessment of the existing facility from a building systems standpoint including analysis of the mechanical, electrical, plumbing, fire alarm, fire protection, structural and roof conditions. The building was also reviewed for current code compliance and the relative "health" of the building's various systems was evaluated. The assessment also provided an understanding of likely future capital expenditures related to these systems and was conducted by a Colorado building engineering firm (BCER Engineering). The assessment is often referred to as the BCER report.

BCER General Observations

The following common observations were generally true for all disciplines involved.

- With only a few exceptions, the facility appeared well maintained and staff was knowledgeable of the equipment and operating requirements.
- The facility, as well as most of its physical infrastructure, is dated and in some cases deficient with regard to code compliance and is generally lacking in what would be considered "desirable" public amenities and features.
- The building has life safety and fire protection deficiencies that require additional study and possible engineering analysis for compliance with the adopted building and fire codes. The most significant issues are related to the egress, occupancy separation of the different occupancies, fire alarm system and the non-code complying atrium.

BCER Recommendations

The BCER report included a number of recommendations related to life safety/fire protection, mechanical, electrical, structural, and roof improvements. Overall the report identified an estimated construction and engineering cost (in 2010 dollars) of $1.2 Million to correct code and standards compliance items and approximately $5 Million in general upgrade or repairs of the existing facility to allow for continued operation of the terminal.

2011 Conceptual Development Plan (CDP)

It was decided early in the planning process for the 2011 Terminal Area Plan that investing significant dollars in a building that was scheduled to be replaced did not make sense. Consequently, the focus of the planning from that point forward was on projecting future demand and making recommendations for a replacement terminal facility that could accommodate future demand. The planning process identified some preliminary replacement terminal concepts and ultimately refined those concepts into a preferred concept referred to as the Conceptual Development Plan (CDP) for the passenger terminal.

The CDP locates the replacement terminal on the east side of the existing terminal with the intention of the full phased build-out to be centrally located to the existing terminal support facilities. Terminal support facilities include the vehicle access loop road, the vehicle and aircraft parking areas, the rental car facilities, the aircraft fueling and deicing facilities, etc. The next step was development of a phasing plan that would allow the final terminal footprint to overlap the existing terminal while maintaining full airport and terminal operations during each phase of construction. The CDP's planned concourse would house six holdrooms with contact gates and loading bridges. The additional remain-over-night (RON) positions would also be in a linear configuration east and west of the concourse accessed by 10-foot wide covered walkways. These can be converted to contact gates as needed and additional RONs added. The proposed concourse was sited at an elevation similar to the existing upper concourse.

A second level connector bridge ties the terminal with the concourse. The connector would house concessions/restroom/support facility node on the concourse level. A portion of the connector bridge would contain a lower level at the terminal elevation. The ground level would house terminal support functions and a public side loading dock accessed from the west. The Ground Service Equipment (GSE) vehicle ramps will be reconstructed to access both the east and west ends of the proposed concourse and will pass under the connector bridge. The construction phasing plan was designed to minimize disruption to airport operations during construction. A detailed description of the phasing plan follows. It was also anticipated that the construction of an airport administration building would be Phase I of the terminal area redevelopment with Phase II being the first phase of the construction of the replacement terminal building.

Landside

- **Phase I.** Construct the airport administration building and associated vehicle access, parking and landscaping improvements.
- **Phase II.** Construct the check-in lobby, airlines operations/offices/bag make-up, vertical core, and connector. The existing terminal would remain in operation during construction. Airline vehicle access to aircraft continues via existing west ramp.

Open phase II building for departing passenger functions. Continue to use existing bag claims.

- **Phase III.** Demolish the single story airline operations portion of the existing terminal. Construct first replacement bag claim unit and partial RAC counters. This would require some sharing of RAC counters on temporary basis.

  Open replacement bag claim unit #1. All terminal functions are now in the replacement building.

- **Phase IV.** Demolish remainder of existing terminal. Construct second bag claim and finish out the replacement landside building.

- **Post-Planning.** Longer term expansion of the check-in lobby for Planning Activity Level would occur as needed on the east side of the terminal. Additional bag claims beyond the forecast period can occur as needed on the west side of the terminal.

Airside

- **Phase I.** Construct vehicle parking for the proposed airport administration building (near the existing air cargo staging area).

- **Phase II.** Construct the eastern four gates of the replacement concourse, and a temporary connection to the existing terminal through Gate #6. Gate #4 would continue to be used during construction.

  Open new gates. These would be accessed from the replacement terminal for departures but use existing bag claim units via the temporary connection to Gate #6.

- **Phase III.** Use four replacement gates and continue to use existing Gates #1-3 until replacement bag claim unit is completed (Phase 2 landside). Close Gate #4, and extend concourse to the west.

  Open fifth gate.

- **Phase IV.** Continue replacement linear concourse to the west. There is an option of either replacing existing holdroom (Gates #2-4), or continuing to use this space and connecting to the replacement concourse. A replacement concourse is shown on the CDP.

- **Post Planning.** Concourse expansions east and west could be constructed as needed.

The CDP is depicted in the following illustration, entitled *2011 CONCEPTUAL DEVELOPMENT PLAN*.

2012 Architectural Terminal Design

Subsequent to the completion of the 2011 Terminal Area Plan for the Airport, a preliminary architectural design and associated renderings were completed for the replacement terminal facilities. An illustration of this architectural rendering is shown in the following figure entitled *2012 ARCHITECTURAL RENDERING*.

Terminal Expansion Phase I Project

As discussed previously, an administration building that would also serve some terminal building functions was envisioned as the first phase of the terminal program. Construction of this building commenced in 2013 and was later halted in May of 2014 due to concerns related to the financing of the building. This first phase of terminal expansion is also illustrated on both CDP and the architectural renderings.

Introduction and Background Summary

As the Airport is now in the design phase of the replacement runway program, and given the financial challenges associated with funding the runway program, combined with the financial challenges associated with the terminal, it has been determined that the Airport will not be able to restart the replacement terminal program for a period of at least 10 to 15 years. Consequently, the focus of this Terminal Area Plan Amendment is on making the existing terminal safe, efficient and as functional as possible for the next few years while minimizing investment into the building where at all possible.

The following sections of this report include a summary of the 2011 inventory, forecasts and facility requirements, a reassessment of the terminal building and its associated systems, analysis of other terminal building considerations and a capital improvement project list with a new interim phase for the terminal building. The ultimate goal of the amendment is to define this interim phase or steps which can to be taken to keep the existing terminal building operational until the construction of the replacement terminal becomes financially feasible.

B. Inventory, Forecasts and Facility Requirements

The City of Grand Junction, with a picturesque backdrop of mountains and monuments in Western Colorado, offers year-round amenities to both visitors and local residents. Grand Junction Regional Airport (GJT or the Airport) is located approximately 3.5 miles northeast of downtown. The Airport provides a safe operating environment for all classes of aircraft, including small general aviation aircraft, corporate business jets, and commercial service passenger aircraft. The Airport's location is illustrated in the figures entitled *AIRPORT LOCATION MAP* and *AIRPORT VICINITY MAP*.

The Airport, along with the aviation-related businesses and facilities, represents a vital and significant regional economic asset. In addition to the many aviation-related assets, the Airport also provides benefits to local businesses and industries, promotes tourism, as well as encourages additional business development and expansion throughout Mesa County, the surrounding communities, and adjacent counties. The 2013 Colorado Airports Economic Impact Study quantified the total impact of the Grand Junction Regional Airport at 2,871 jobs with a total payroll of $130.8 million and a total economic output of $380 million.

Following a period of rapid enplanement growth from 2006 to 2011, the Grand Junction Regional Airport completed a Terminal Area Plan which recommended replacing the terminal in phases in order to accommodate future growth. Due partly to the fact that this plan was in place, and also due to the financial issues the Airport has had to face, terminal maintenance and improvements have been deferred in the years since. This document is intended serve as an amendment to the 2011 Terminal Area Plan and will reconsider short-term improvements for the terminal with the goal being to bridge the gap from the present to the point at which the replacement terminal is more financially feasible. It is important to note that this is not an entirely new plan, but instead, an amendment of the 2011 Terminal Area Plan designed to create an interim phase prior to the full replacement terminal. This initial *Inventory, Forecasts and Facility Requirements* chapter reviews the information provided in the initial three chapters of the 2011 plan and updates the information as necessary.

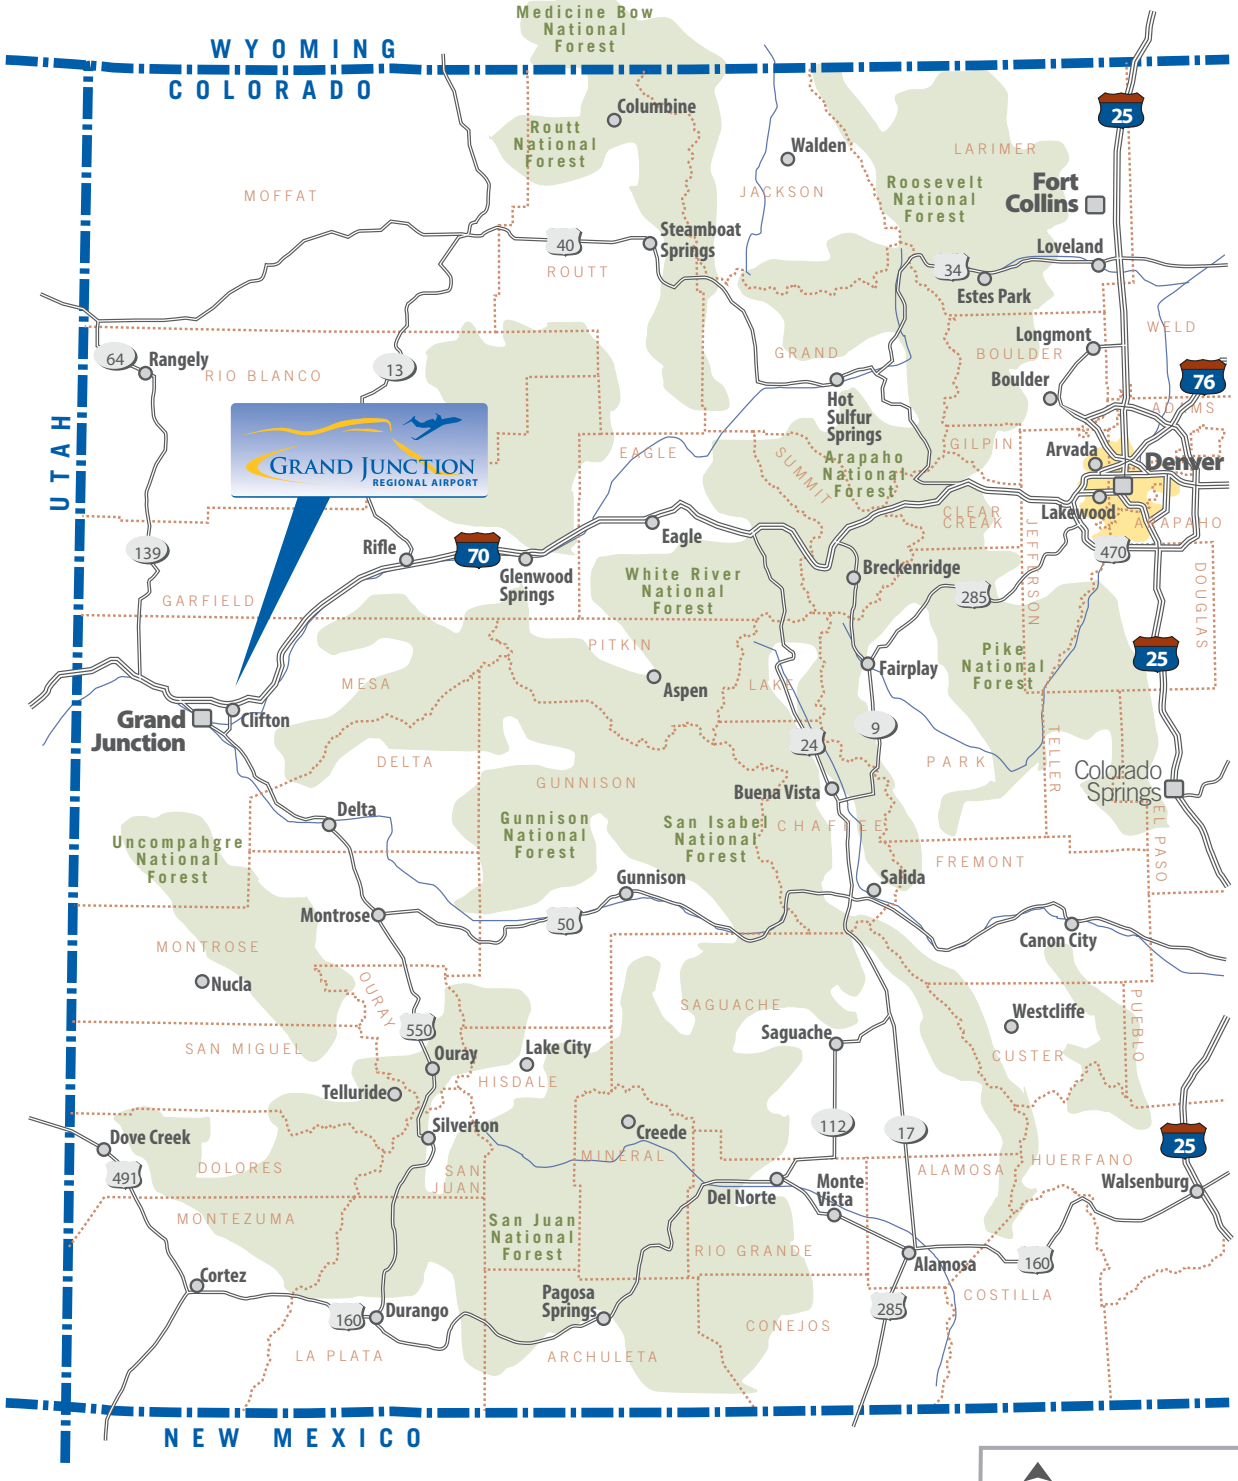

Figure 3 **Airport Location Map**

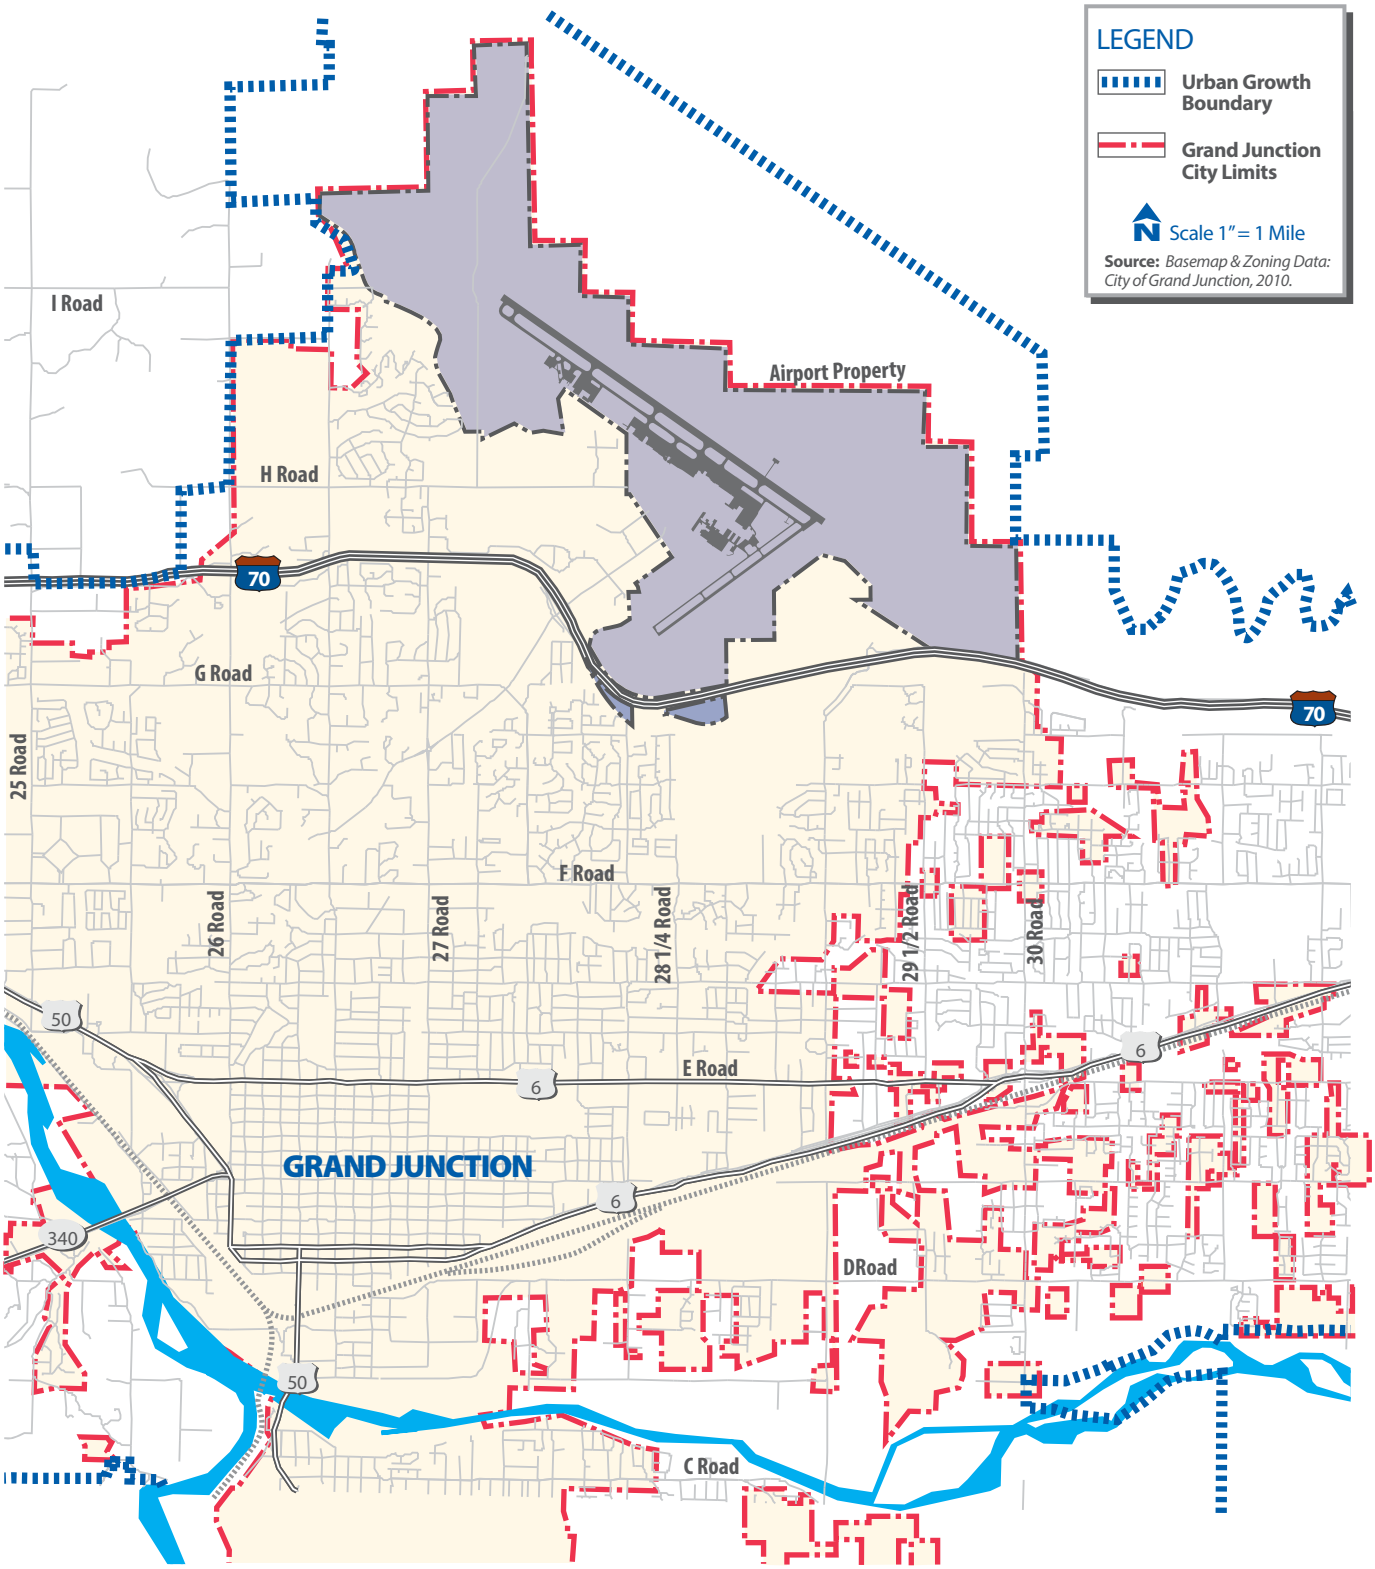

Figure 4 **Airport Vicinity Map**

Grand Junction Airport Authority Board

Grand Junction Regional Airport is owned and operated by the Grand Junction Airport Authority Board. The Board is comprised of seven appointed members; three from Mesa County, three from the City of Grand Junction, and one at-large member. The majority of the land owned by the Grand Junction Regional Airport Authority was purchased/deeded from the City of Grand Junction and Mesa County. The Airport Manager is responsible for the day-to-day operation of the Airport and reports to the Board.

Air Service

Currently, the Airport is served by four airlines providing 14-15 daily scheduled non-stop departures on a yearly basis, which includes: United Express/Skywest with daily service to Denver; Delta Connection/Skywest with daily service to Salt Lake City; American Eagle/American Airlines with daily service to Phoenix and Dallas/Ft. Worth; and Allegiant Air with less than daily service to Las Vegas. American is also planning to initiate direct Los Angeles service in the summer of 2017.

Air Taxi/charter air service is also available at Grand Junction Regional Airport by Denver Air Connection. Denver Air Connection provides service out of the main passenger terminal to Centennial Airport and Rocky Mountain Metropolitan Airport, both located in Denver.

Terminal Area Facilities Inventory

Facilities information for elements of the terminal area was gathered from the 2011 *Terminal Area Plan*, as well as on-site observations and surveys in January 2016. These elements include the physical layout of buildings, runways, taxiways, aprons, and ground access facilities. Later sections of this chapter provide detailed discussions on the functionality of the terminal building and support facilities.

Aprons

The commercial service aircraft parking apron at GJT is located adjacent to the passenger terminal building, south of Runway 11/29. The primary general aviation apron is located east of the commercial service apron adjacent to the various FBO owned facilities. The west half of the general aviation apron is primarily reserved for larger corporate jet and turboprop aircraft parking and rotorcraft parking. The east half of the general aviation apron contain aircraft tie-downs for smaller aircraft. A portion of the commercial service and cargo aprons were recently reconstructed and the commercial service apron was extended to the northeast to improve airline circulation and access to the terminal parking areas and gates.

Passenger Terminal Building

The passenger terminal building at Grand Junction Regional Airport was opened in 1982 and originally consisted of approximately 70,000 square feet of space. The terminal is located on

the south side of Runway 11/29 at approximately the midpoint of the runway. The three-level facility consists of airline ticketing counters, a baggage claim/handling area, passenger-waiting areas, rental car counters, a restaurant, a gift shop, airline and Transportation Security Administration (TSA) administrative offices, and Airport Authority offices. Arriving and departing passengers enter and exit the terminal building on the ground level and airline ticket counters, rental car counters and baggage claim are also located on the ground level. The second level consists of security screening, passenger waiting areas and boarding gates and the restaurant and gift shop. The third level consists primarily of TSA offices and Airport Authority offices are currently located in one of the Airline Ticket Offices (ATOs). A detailed evaluation of the passenger terminal building and support facility functionality is discussed later.

Automobile Parking

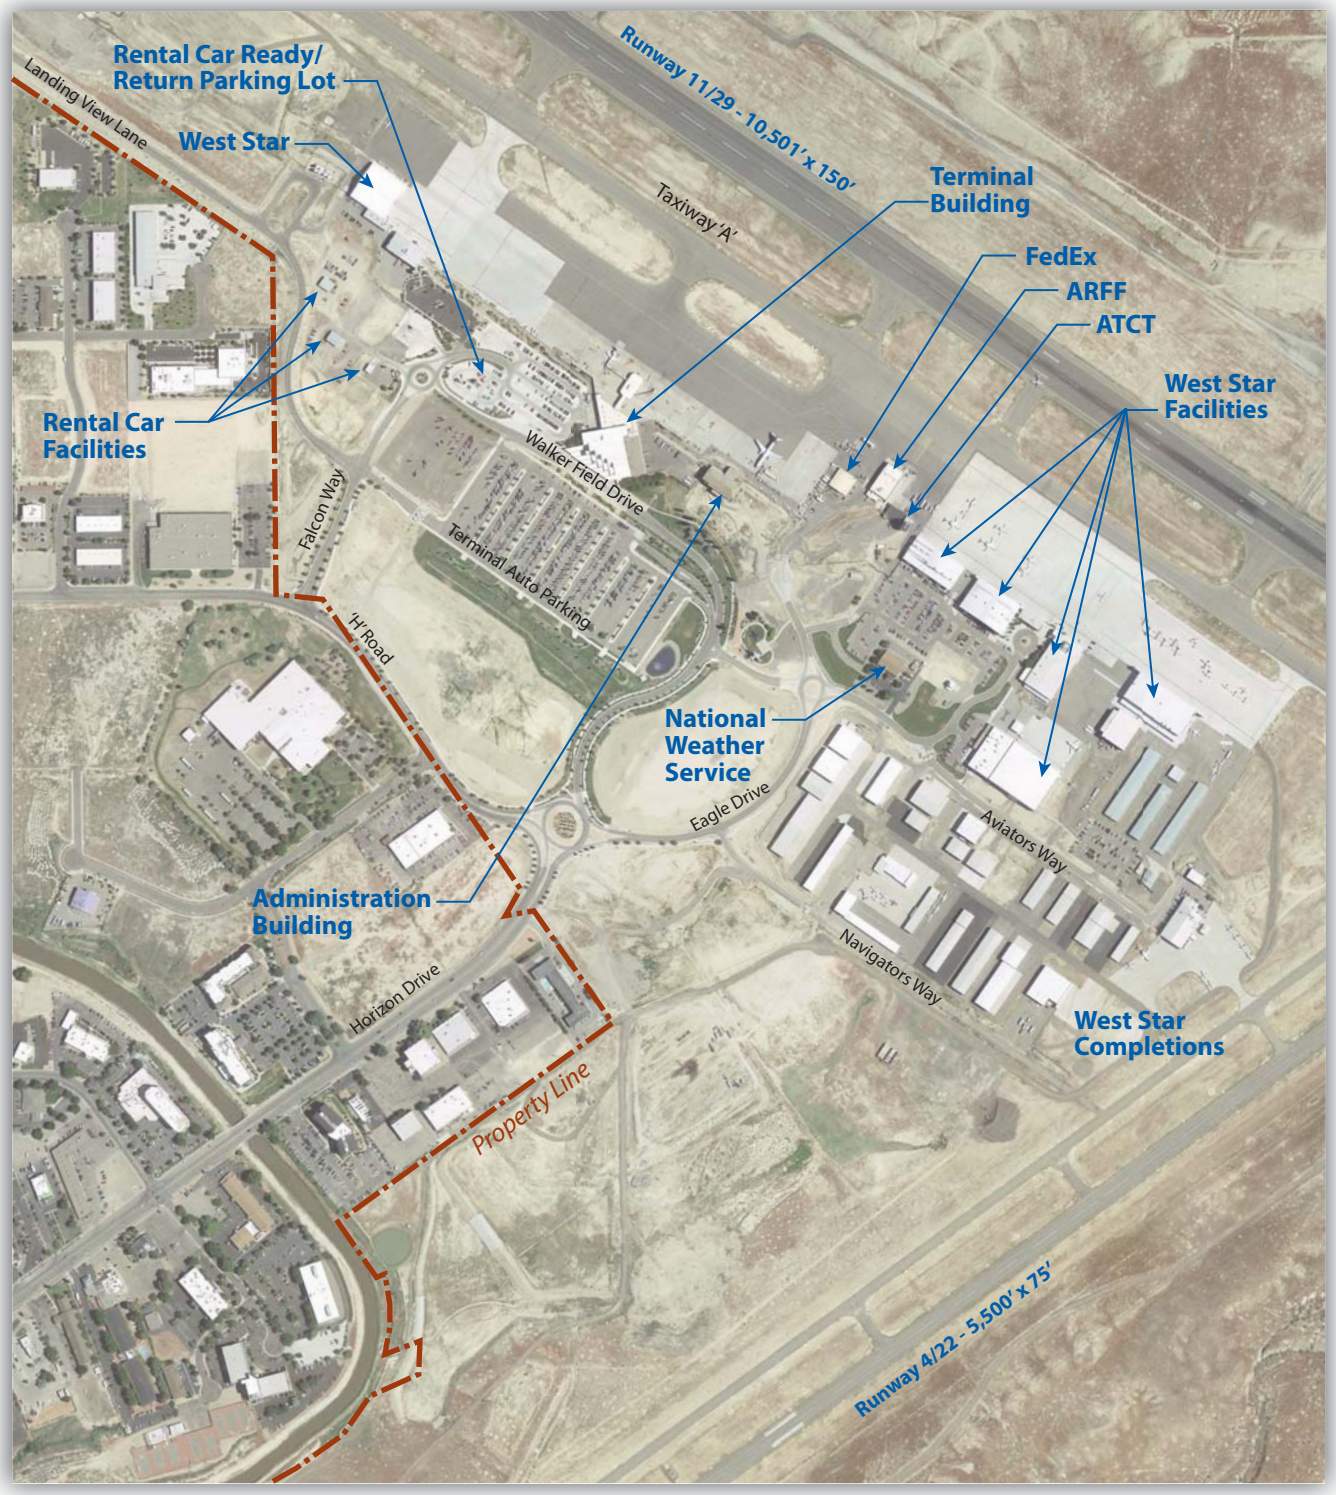
There is an automobile parking facility located south of the terminal and support equipment parking located east of the terminal. Three rental car facilities are located southwest of the terminal building and rental car ready car and return (R/R) lot parking lot is located directly west of the passenger terminal. The automobile parking area was reconstructed and expanded in 2007. The redesigned parking area provides for 552 standard parking spaces, 30 handicap parking spaces, 12 motorcycle parking spaces and 38 recreational vehicle spaces. The parking areas are accessed by a dual entrance road system from the northbound section of Walker Field Drive. The exit from the parking area connects with the Falcon Way.

Other Buildings

Airport Administration Building. In 2013, the Airport initiated construction of an Airport Administration Building. The original designed called for a three story, 25,000 square foot building with function including administrative space for airport staff, administrative space for TSA, airport operations and firefighting as well as some baggage screening functions. Construction was halted on the building in May of 2014 at an approximately completion percentage of 51 percent. The building is located immediately east of the terminal.

West Star Aviation Facilities. West Star Aviation is the fixed base operator (FBO) located on airport property. The FBO facilities consist of several large aircraft storage and maintenance hangars. The FBO also maintains 74 aircraft tie-down spaces on the apron.
Hangar Facilities. The general aviation aircraft storage hangar area at the Airport is located south and east of the FBO facilities. There are three privately owned T-hangar facilities located southeast of the FBO facilities containing 38 aircraft parking spaces. In general, the hangar area has good landside access via Aviators Way and Navigators Way which extend east off of Eagle Drive.

Aircraft Rescue and Fire Fighting (ARFF) Facility. The ARFF facility is located east of the terminal building, directly west of the Airport Traffic Control Tower. Per 14 CFR Part 139, *Certification of Airports*, the Airport currently maintains an Index B ARFF capability, which



is required by airports that accommodate five daily departures by commercial-use aircraft less than 126 feet in length (e.g., CRJ-700, B-737-700).

Airport Traffic Control Tower (ATCT). The ATCT at the Airport is located immediately east of the ARFF/SRE facility south of Taxiway A between connector taxiways A5 and A6. Access to the ATCT is controlled through a security gate with prior telephone clearance.

National Weather Service. A National Weather Service weather station is located south of the ATCT and provides weather information for the area.

Additional Buildings. Additional buildings located within the Terminal Area include the privately owned FedEx hangar which is located west of the ARFF building, and the privately owned Sky Adventures Building and Hangar located west of the passenger terminal building at the west end of the commercial service aircraft parking apron.

Most of these facilities are shown on the following figure, entitled *EXISTING TERMINAL AREA FACILITIES*.

Scale 1" = 1,200 Feet

Source: *Google Earth Imagery, 2016.*

Figure 5 **Existing Terminal Area Facilities**

Evaluation of Existing Terminal Building Conditions – Functional Issues

In November of 2010, the consultant team for the Terminal Area Plan met with airport management and the TSA to discuss the functioning of the terminal, the utilization of their individual space, and what works and does not work within the terminal building. The consultant team for this Terminal Area Plan Amendment again met with airport staff in January 2016 to discuss the terminal and reassess what works and what does not work. Members of the consultant team also examined the building systems including structure, heating, ventilation and cooling, mechanical and electrical in order to update the 2011 terminal assessment.

The passenger terminal building at the Airport was originally constructed in 1982. The structure is on three levels. The first (ground floor) contains passenger check-in and baggage claim; airline operations and baggage make-up; and rental car counters. Baggage make-up is defined as airline areas for loading checked baggage. The second floor includes non-secure passenger waiting areas, the SSCP; holdrooms for two of the walk-out gates; concessions; and TSA offices. The third floor is used for regional TSA offices.

In 2004 a holdroom expansion (upper holdroom) was added, which is connected to the second floor of the terminal, but due to the ground elevation change across the terminal site, it is a single level building slightly above apron level. The addition includes two loading bridge equipped gates, holdrooms and restrooms. There are also two other "gates" accessible from the holdroom but are simply exit doors to the apron. With the addition, the gross area of the terminal is approximately 77,500 sf.

The following summarizes the results of these meetings and observations.

Passenger Wayfinding and Signage

The terminal has a relatively simple, open plan and wayfinding should be simple. However, as the airlines and rental car companies noted, there are no signs in the main entrance/check-in lobby to direct people up the stairs or escalator to the second floor and gate holdrooms. Although the lobby has a high, open atrium, the SSCP is not visible from the ground floor and additional signage would be helpful. Similarly, although there is a meeter/greeter waiting area at the SSCP exit, there are no signs to direct them to the second floor.

For arriving passengers, there are signs after the SSCP exit toward the escalator to the ground floor for baggage claim and ground transportation. However, it was noted that many passengers are not immediately aware of where baggage claim is located when they get to the ground floor since the claim area is slightly behind them when they disembark from the escalator.

Because departing passengers tend to enter the terminal through the vestibules at the end of the check-in counters, the airline identification signage on the back walls is not readily

identifiable. This is not a major wayfinding issue due to the size of the terminal and relatively good visual access to ticketing, but should be considered as a possible improvement in the future.

The escalators are old and parts have become difficult to obtain. Although the adjacent stairs are wide and very visible, the floor to floor height of the terminal discourages use by passengers, especially with carry-on bags. The main elevator is small and slow, so is not a viable alternative for most passengers. A second elevator in the northwest corner of the terminal is not visible to passengers. It is used primarily for deliveries.

Passenger Check-in

All of the check-in counters (ATO counters) are located in a single row. The passenger circulation and queuing area has been reduced in depth from 38' in the original terminal design to 27' (as measured from the face of the ATO counter to the escalator). This was done to accommodate placing the checked baggage screening equipment behind the ATO counters. The reduced depth affects half of the ATO counters: Denver Air Connection, Delta and United. The passenger queue is approximately 19' deep with approximately 8' for cross-circulation. Although these depths are less than what would be recommended, the passenger volumes for these carriers and the configuration of the passenger queues appear to work. In front of the other ATO counters (Allegiant, American, and the ATO area #1) the 27' depth can be used for passenger queuing without conflict with a 20' deep circulation and seating area.

The number of self-service check-in units (kiosks) is limited at present. Only Delta (4 units) and American (1 unit) have kiosks. These are located in the check-in queue adjacent to the ATO counters from which the power and communications is supplied. The trend in the industry is to have more self-service kiosks, even at smaller airports such as GJT, but the implementation of kiosks at a specific airport by each airline is highly variable, as is the primary customer. At present, Delta directs all passengers, including those with checked bags, to the kiosks, whereas American uses its kiosk primarily for boarding passes. It was the consensus of the airlines that with the high percentage of passengers traveling without checked bags, adding kiosks away from the check-in queues would improve service and reduce congestion near the ATO counters. This would require new power and communications access at non-ATO counter locations in the terminal.

As noted, in order to meet TSA requirements for checked baggage screening, the airport authority has moved the ATO counters to allow reconfiguration of the baggage belts and provide space for a CT-80 EDS (explosive detection system) unit for each of the four make-up areas. These are considered to be ‘mini-inline’ systems because cleared bags go directly to the make-up conveyor. The location of the CT-80s minimizes the disruption to the make-up rooms and removed the units from the passenger queue. However, the related equipment

(inspection tables and explosives trace detection units) and the manual movement of bags from each ATO position to the CT-80 feed conveyor can cause congestion behind the ATO counters. The position of the ATO counters and kiosks relative to the clerestory windows results in glare problems at most of the counter positions at various times of the day, especially in the winter when sun angles are low. The glare problem from the front window wall is most severe at the first ATO counter.

Baggage Claim

Each of the two baggage claim units has 80 linear feet of claim frontage. This size is adequate for the 50-75 seat regional jets which are used by the majority of airlines at GJT. Under most circumstances, these would be too small for 150-seat narrow-body aircraft such as that operated by Allegiant. It was reported that even with Allegiant's high load factors, the claim units are of an acceptable size since the percentage of passengers with checked bags is relatively low. The oversized baggage slide is also of adequate size for skis and other large checked items.

The input side of the claim units, however, does not function well. One of the claim units has limited weather protection (only the actual belt is covered), with poor lighting and ramp apron drainage problems. This leads to icing conditions in winter where the airline personnel unload the bag carts. The second claim unit is under cover from the second floor of the terminal, but also has poor lighting. The addition of wind barriers to both claim units has limited the unload frontage to that of a single bag cart at each. When multiple arrivals occur, only one flight can unload at each claim and baggage delivery has been delayed.

The roll-up door on the oversized baggage slide is manually operated and subject to jams. The locking mechanism is poorly designed.

Passenger Security Screening

The screening checkpoint (SSCP) is located on the second floor. One lane is in operation most of the day with the second lane opened during high volume periods. At 28' wide, the two lane SSCP is narrower than a typical configuration for its equipment, newer, wider baggage X-ray equipment and an advanced imaging technology (AIT) scanner will likely add to congestion within the SSCP. Expansion of the SSCP footprint is limited by the food/beverage kitchen and the exit corridor from the gates.

Passenger Gates and Holdrooms

There are two gate areas: the original terminal's gates (now numbered #1 and #6); and the expansion upper holdroom's four gates (#2 - 5). Gates #3 and 4 have loading bridges, each of which has a carry-on bag cart lift so that passengers can drop off and retrieve carry-on bags from within the loading bridge. This also avoids the time and labor of manually taking

bags to and from the ramp. Both loading bridge gates are common-use on a first come-first serve basis. If the gate is occupied, other aircraft will park at hardstand positions. However, from a practical standpoint, Gate #2/3 is used by Allegiant and American. Gate #4/5 is used for Delta flights, with United as the secondary user. This is primarily due to the location of each airline's gate equipment in the holdrooms and GSE equipment on the ramp a secondary consideration. United also uses Gate #6 for ground boarding flights. Gate #1 is seldom used for scheduled flights. The airlines and the Airport would prefer to have loading bridges for all gates for passenger level of service, safety and security.

The holdrooms for all the gates have large, comfortable soft seating units which present a good image in contrast to typical holdrooms with long rows of bench seating. The triangular configurations of the lower concourse holdrooms and the relatively shallow depth (<20') of the upper concourse holdrooms limit the flexibility to provide different seating layouts or higher seating densities.

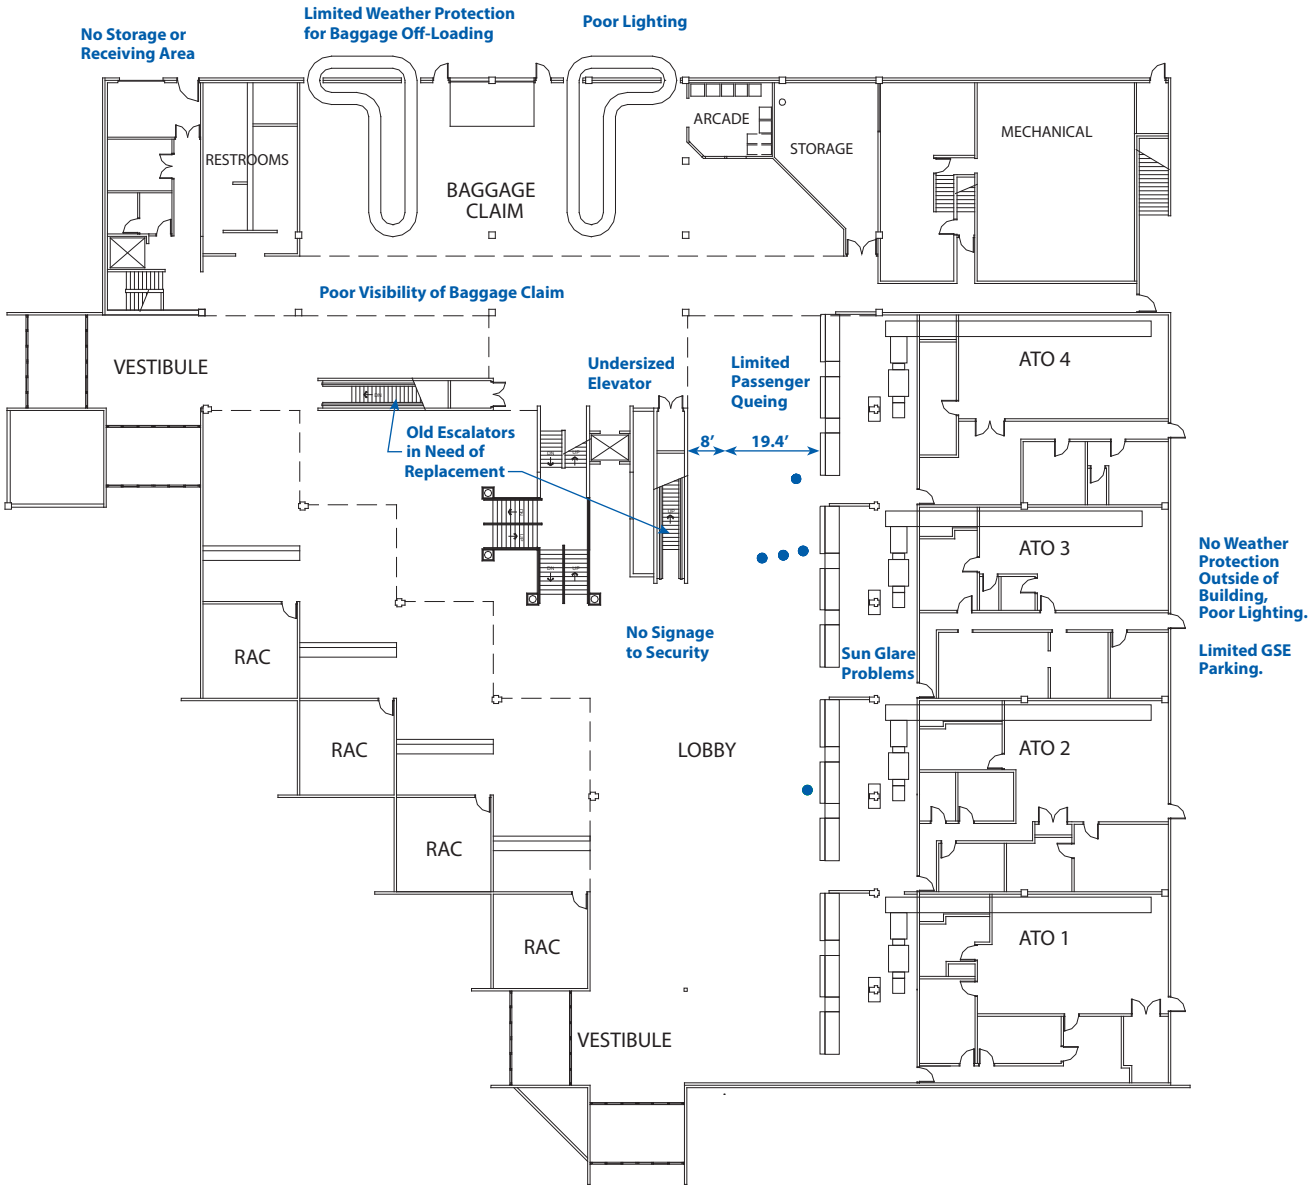
Concessions

As of 2016, there are two main concession locations in the terminal: a new restaurant and a new news/gift shop, both located after security. The restaurant recently obtained a liquor license and constructed a bar at the end of the upper concourse. This is a nice amenity for passengers but further reduces necessary holdroom space. Concession support space is also limited. There is no remote storage for the news/gift shop. The food and beverage support is primarily the adjacent kitchen and prep areas.

The terminal has a small loading dock and receiving area which is accessed through the rental car ready/return lot. However, there are no adjacent storage areas for any of the concessions. All concessions supply and waste removal must go through public areas.

Airline Operations and Baggage Handling

The terminal is configured with four individual operational/baggage make-up modules, each associated with a bank of six ATO counter positions; referred to as ATOs #1 though #4. At the time of the revised 2016 inventory, the usage of the four modules was as follows:



- ATO #1. Airport Administration. The Airport renovated this space in 2015 for airport staff use. The space was formerly occupied by US Airways.
- ATO #2. American (AA). AA currently occupies this space.
- ATO #3. Skywest. Skywest operates flights for both Delta (DL) and United (UA).

- **ATO #4.** Denver Air Connection and Allegiant (G4). Denver Air Connection and Allegiant currently share this space.

Each of the ATO modules has a single baggage make-up belt which can typically stage two bag carts parallel to the belt. In most cases the configuration of the operations/office spaces allows for a second row of bag carts to be staged if necessary. The baggage make-up areas have dual roll-up doors which allow both rows of carts to be pulled straight out by tugs, but empty carts typically have to be positioned by hand. Most of the airlines also use the make-up area for GSE storage at night. Each of the ATO modules has a different office layout for ATO support, operations and break areas. The presence of personnel lockers and other types of storage in the baggage make-up area indicates that operations areas may be undersized for current airline operations. The area outside the ATO modules is used for GSE parking and occasionally overflow baggage make-up. This area is not under cover. Lighting is poor both adjacent to the operations area and in the other GSE parking areas away from the building. There are no electric power outlets for engine block heaters or future electric GSE vehicles. The total amount of GSE parking was considered undersized by most of the airlines.

Ground Transportation

There are six rental car companies operating on airport. Enterprise and Hertz have individual counters. Avis/Budget and Alamo/National share counters and offices due to common corporate ownership. The companies report that the counters are adequately sized for their level of activity, but the offices may be oversized. The location of the counters is visible to passengers from the bottom of the escalator and passenger queuing appears to be adequate without interfering with terminal circulation. The rental car ready and return lot is conveniently located adjacent to the terminal and separate from the public parking area. A detailed layout of the terminal building floor plans, with notes related to functionality, are presented in the following illustrations, *TERMINAL LEVEL 1*, *TERMINAL LEVEL 2* and *TERMINAL LEVEL 3*.

Summary of Aviation Activity Forecasts

Forecasting is a key element in the terminal area planning process. The forecasts are essential for analyzing existing airport and terminal area facilities and identifying future needs and requirements of the facilities.

Historic Airport Activity

As indicated in Chapter B of the original Terminal Area Plan, passenger enplanements at the Airport grew significantly in the 2000's increasing from 120,057 in 2001 to 218,519 by 2010, a compound annual growth rate of 6.17 percent. In the years since 2010, enplanement growth has slowed and essentially remained flat as 2015 enplanements totaled 219,252. This slowdown in passenger growth has somewhat reduced the need to expand the terminal to accommodate more passengers, however, as discussed in the original terminal area plan, the space configuration of the terminal is still an issue including insufficient space for security screening and passenger holdrooms/gates.

Passenger Enplanement Forecast

The 2011 Terminal Area Plan recommended that the Airport plan for passenger growth of approximately 3.0 percent per year based on the FAA industry projected growth for regional air carriers. This is still considered an appropriate growth rate for planning purposes; however, it is important to note that future terminal improvements should be implemented as warranted by demand and not tied to certain years. The 2016 FAA TAF projects annual enplanement growth for GJT at approximately 1.3 percent which results in 2035 enplanements of 282,790. A 3.0 percent annual growth rate would mean that by 2035, the Airport would be expected to have to accommodate just under 400,000 annual enplanements or approximately 800,000 total passengers per year.

Planning Activity Levels

Because the forecasts project demand over a specific timeframe (i.e. the 20-year planning period), removing the timeframe from the analysis and focusing on an activity level can increase the shelf-life of a future plan. Using Planning Activity Levels (PALs) instead of specific time-based forecasts provides an appropriate response to a future level of demand even if the forecast of exactly when future demand will materialize is incorrect, and will focus planning decisions on the size and configuration of a terminal.

Planning Activity Levels are typically rounded to representative enplanement forecasts rather than focusing on serving a specific demand level for a given year. The following table entitled *PLANNING ACTIVITY LEVELS (PALs)* also includes the approximate years with which the levels correspond based on a 3 percent annual growth rate.

Table 1
PLANNING ACTIVITY LEVELS (PALs)

Level/ Phase	Enplanements	Airport Forecast Corresponding Year	FAA TAF Corresponding Year
I	250,000	2021	2025
II	300,000	2027	2040
III	350,000	2031	>2040
IV	400,000	>2035	>2040
V	450,000	>2035	>2040

Summary of Terminal Facility Requirements

The terminal facility requirements outlined in the 2011 TAP determine the type and magnitude of facilities to be ultimately planned and programmed for the Airport's terminal area. Specific allocations of the type and magnitude of such facilities are noted as the basis for the recommendations for improvements. The most important component of the 2011 TAP is the passenger terminal. With the exception of the holdroom/concourse expansion and some minor modifications to the checkpoint, ticket counters and concessions, the existing terminal is basically unchanged since it was originally constructed in 1982. Although the modifications were improvements over the original facilities, some areas still do not function optimally.

Developing a terminal facility program begins with examining the adequacy of each existing component to serve current activity. From that basis, forecast changes in activity are applied to develop recommendations for future planning horizons. These recommendations use actual activity and facilities at Grand Junction Regional Airport as a basis, and are the subject of quantitative as well as qualitative analyses. Although some "industry standard" criteria are used, the recommendations for future facilities are based on local conditions and circumstances.

Aircraft Gate Demands

The following table entitled *PROJECTED GATE DEMAND* summarized the number of recommended gates per PAL from the 2011 TAP.

Table 2

PROJECTED GATE DEMAND – SUMMARY

	Passengers Per Gate Methodology	Departures Per Gate Methodology	Recommended Number of Gates
Existing Gates	---	---	4
PAL I	5	4	5
PAL II	5	5	5
PAL III	6	5	6
PAL IV	7	5	7
PAL V	8	6	8

Note: Using Planning Activity Levels (PALs).

Based on 2016 airline operations the lower level concourse is used by United for ground boarding operations only. The addition of passenger boarding bridges at either or both Gates #1 and #6 would facilitate passenger boarding and improve safety and security of the operation. It would also help to balance airline departures operations by making more holdroom area available. Bridging the distance from the holdroom to the boarding bridge can be achieved using passenger boarding tunnels, as shown in Figure 11. With the addition of either boarding bridge, operations at Gates #2/3 and 4/5 become dependent, requiring a pushback tractor for departure operations (a proposed Gate #6 departure operations will also be dependent, requiring a pushback tractor).

Design Hour Passengers

At Grand Junction Regional Airport, activity is highest on days when Allegiant operates from the terminal. Although an average day of the peak month is typically used for terminal planning, the concentration of Allegiant's activity on these days places additional demand on terminal facilities. Thus it was recommended in the 2011 Terminal Area Plan that a Thursday/Sunday be used as the Design Day. Based on current 2016 airline schedules (October), this recommendation is still valid. An estimate of current peak hour passenger volumes as a percentage of daily activity was made based on analyses of scheduled seats and assumptions as to flight load factors on busy days. Allegiant's operations currently set the peak hour due to their use of 166-seat aircraft with average 90 percent load factors. This compares to all other airlines operating mostly 50 to 75 seat regional jet aircraft.

The enplaning peak hour currently accounts for approximately 18 percent of the daily enplaned passengers and is scheduled in the evening. The future enplaning design hour is estimated to be between 205 and 234 passengers in anticipation of schedule flexibility with full utilization of the lower departures lounge. This is roughly equivalent to the Allegiant flight at a 90 percent load factor, plus either two CRJ-200 aircraft or one CRJ-700 at 85 percent load factor.

The evening deplaning peak hour is also dominated by an Allegiant arrival and accounts for

approximately 18 percent of daily arrivals. As with the enplaning peak, new service will likely increase the early evening (7-8 p.m.) secondary arrivals peak, but not exceed any of the hours when Allegiant operates. Similar reductions in the deplaning peak hour factor have been assumed as for the enplaned peak hour factor. Total peak hour passengers (enplaned plus deplaned) coincide with mid-day activity, and account for approximately 20 percent of daily passengers. This percentage is assumed to decrease over time in the same proportions as enplaned and deplaned peak hours.

Passenger Terminal Facilities Planning Criteria

Terminal facility requirements for an airport (the terminal program) are a function of the specific and unique characteristics of that airport. These include the design levels of passenger (included in Chapter 3 of 2011 TAP) and aircraft activity; the number and type of airlines serving the airport; the operating requirements of the airlines; and local factors such as the proportion of leisure vs. business travelers and local originating passengers. The base year activity in the 2011 TAP was 2010. Since enplanements have remained essentially flat in the five years since (2015 enplanements totaled 214,401), the base year activity levels are still considered valid.

The capacity of each element of a terminal facility can vary depending on the level of crowding and/or processing time which is considered acceptable. In many cases the degree of acceptability may also vary depending on the configuration of the terminal space and the level of amenity provided. Thus, the capacity of a terminal can vary significantly. The approach taken in developing terminal facilities requirements for GJT has been to review the plans and areas of the terminal, make limited observations of passenger activity, and discuss with airport and airline staff how well the present facilities are functioning. These observations - coupled with calculations of area per passenger, per gate, or other determinant of demand - were compared to generally accepted industry planning factors. From these comparisons, a planning factor for each terminal component was determined and used to project facility requirements.

The program areas developed were based on the utilization of existing facilities, and on projected trends as discussed in the previous chapters. The following table entitled *AIRPORT TERMINAL FACILITIES PLANNING CRITERIA* presents the program data in seven columns:

- Column 1. Existing Facilities. These are the areas measured from architectural plans of the terminal, and the current functions as observed.
- Column 2. Base Year 2015 Activity. These areas represent the facilities which would be needed to support levels of passenger activity for the base planning year. These values may differ from existing conditions and either point out deficiencies in existing facilities or facilities with excess capacity. These differences help to

establish whether existing ratios of space per unit of demand are appropriate to use for planning.

- **Columns 3 through 7. Recommended Facilities – Planning Activity Levels.** These are the areas recommended to support each level of Peak Hour passengers and the associated annual enplanements associated with each Planning Activity Level. The timing of the needed improvements would be based on the actual passenger growth rates.

Table 3

AIRPORT TERMINAL FACILITIES PLANNING CRITERIA

Notes: *SF – Square Foot. LF – Linear Foot. NBEG – Narrow Body Equivalent Gate. RON – Remain Overnight Parking. EQA – Equivalent Aircraft.*

As noted in grey highlights in the above table, the space requirements for the Security Screening Checkpoint and secure circulation should be reconsidered. These requirements were determined in 2011 based on airline fleet mix and peak hour assumptions that may no longer be valid. Given the industry trends of retirement of smaller regional jet (50 to 75 seat) aircraft and the change to larger next generation of regional jet (90 to 115 seat) aircraft, it is likely that additional square footage may be required in these areas. In particular, the existing two gate upper hold room is already approaching capacity during the peak hour. As larger regional jet aircraft and narrow-body aircraft begin to serve the Airport over the planning period, the Airport should consider either expansion of the upper holdroom and/or increased utilization of the lower holdroom during peak hour times.

One additional change to these requirements since 2011 (also highlighted in grey in the previous table) is that TSA administrative space needs have decreased and the Airport plans to relocate its administrative offices to the previous 3rd floor location as TSA begins to vacate this space.

It should also be noted that the terminal space program represents a starting point for terminal planning. It is generally considered a minimum program which is needed to support the design hour levels of passenger activity. As such, it does not refer to any specific terminal concept or gate configuration. When a final terminal concept is chosen, the gross terminal area may differ from the square foot total presented in the tables. For example, the amount of secure and non-secure circulation may vary from the program due to the terminal configuration and location of the security checkpoint, whereas the amount of airline space is relatively independent of the concept selected.

Terminal Building Requirements Summary

The total gross terminal area including all of the elements described previously is estimated as in the following table entitled *TOTAL GROSS TERMINAL REQUIREMENTS* for each of the forecast levels of activity. While some of the space needs have changed from 2011, the total number of gates and square footage of space required is still the same as it was in 2011. The program area per gate (as expressed in terms of square feet per NBEG) is less than most small to medium sized airports. This is primarily due to the assumption of continued simple EDS systems for checked baggage.

Table 4
TOTAL GROSS TERMINAL REQUIREMENTS

PAL	Gates	Area (SF)
I	5	89,600
II	5	93,900
III	6	102,100
IV	7	113,800
V	8	124,700

Source: *HIRSH ASSOCIATES.*
Note: *Existing Terminal Gross Square Footage is approximately 77,500*

It is important to note that the recommendations in this section on Terminal Area Facilities Requirements were developed to understand which facilities improvements might be needed to serve passengers using commercial flights and the passenger terminal. The information presented in this section is then utilized in following section to develop a recommended concept for the terminal building and for the terminal area which considers potential demand and community/environmental influences.

C. Existing Terminal Building Assessment and Other Considerations

Based on the 2016 Update to the BCER report, recommendations were made and costs estimated for the absolute minimum level of renovation necessary to make the terminal building safe and functional for at least the next 10-15 years. It is important to note that many of the building components and systems have reached or exceeded their useful life and that very few recommendations from the 2011 BCER Assessment have been completed in the years since.

This section also considers other terminal building considerations relative to accommodating growth in enplanements over the next 10-15 years. Specifically, planning considerations relative to the post-security holdrooms/gates and the Security Screening Check Point (SSCP).

Terminal Survival Recommendations

This minimum level of renovation will also be referred to as the Terminal Survival Recommendations. In other words, without completing these recommended renovations, the Airport risks losing its ability to process arriving and departing commercial passengers and thus, risks its survival. The list of survival recommendations and rough order of magnitude (ROM) construction cost estimates and construction plus soft/contingency costs for each recommendations are as follows:

- **Mechanical.** The primary recommendation for terminal building renovation is the complete and total redesign and replacement of the mechanical heating, ventilation, and cooling (air conditioning) or HVAC system serving the main building entrance area and atrium. The cost of this replacement system is estimated at approximately $4,410,400.

- **Structural Foundation and Building Frame Integrity.** The structural issues observed in 2010 and again in 2016 are not currently affecting life-safety. However, all of the structural issues observed are the result of ongoing slab-on-grade and foundation movement due to active soils supporting the building. Because of this, it is likely that some of the structural distress could, in the future, become life-safety issues or impact the structural integrity of the budding. It is recommended that the source of water be investigated and that creation of voids under the grade beams and additional piers under the building be considered to stabilize the structure. The underlying geotechnical conditions, building foundation and frame are citied as difficult

challenges to the building's integrity. The expansive and compressive soils are noted as likely to cause ongoing maintenance and repair of the building for the life of the structure. Identifying and eliminating water penetration under the building would be a first step in a process of repairing the foundation and slab.

The cost of this recommendation, including work to repair beams in the lower level and in the terminal roof, install monitoring gauges on precast panels, and structural foundation and floor slab geotechnical investigation is estimated at $187,740.

- **Code Compliance/Life Safety.** Code compliance/life safety deficiencies were identified during the assessments. These issues include the need for a smoke evacuation system for the three story atrium, fire alarm upgrades and emergency and egress lighting. The cost to address these code compliance/life safety issues including a smoke evacuation system for the atrium, fire alarm upgrades, emergency and egress lighting and exit stair enclosures is estimated at $2,086,000.

- **Other.** The assessment noted issue with portions of the existing terminal roof, most notably the existing asphalt and PVC areas. One additional recommendation is that the Airport replace the escalators in the terminal. The cost of these recommended improvements is estimated at $1,796,940.

The total construction costs plus soft costs including contingencies is estimated at $8,481,080. For budgeting purposes it is recommended that the airport plan for $8,500,000 for implementation of these terminal building survival improvements.

Other Terminal Building Planning Considerations

The purpose of this section is to consider other terminal planning considerations. The goal of this section is to determine an appropriate and financially feasible interim phase of terminal development that results in safe, efficient and functional terminal area facilities that will accommodate passengers for at least the next 10 years which is estimated to be the minimum timeframe to a financially feasible replacement terminal or Phase II of the original terminal program. The existing terminal is located with ideal landside access via a minor arterial in Horizon Drive, with a direct connection to Interstate 70. With this terminal location and adequate expansion opportunities within the terminal area, this analysis focused on utilizing the existing terminal area envelope and does not consider the option of assessing a new terminal site. Again, for the purposes of this study, the terminal area is defined as property that surrounds the terminal building including the vehicle and aircraft parking areas and the property inside of the terminal loop roadway system.

Post Security Holdroom Occupancy and Capacity

This section addresses departure lounge occupancy as determined by building code and seating capacity based on industry standards. At the Grand Junction Regional Airport, part of a seating layout plan has been implemented. The Airport has purchased and installed a portion of this seating plan from the manufacturer, Arconas, and the remainder of the planned seating will be purchased and installed over time.

Departures Concourse Occupancy. The original occupancy calculations by Van Sant Architects show the footprint for the upper concourse expansion to be about 4,500 square feet and 233 occupants using the seating areas for this calculation. Our take-offs for the concourse expansion confirm this at 4,544 square feet for this area. Following the code, removing the concourse corridor from this figure yields approximately 3,526 square feet for waiting area and an occupancy of 235 occupants at 15 square feet per occupant. Together with the concourse corridor at 100 square feet per occupant, overall occupancy for the upper concourse is about 245 people. A fully loaded MD-88 at 166 passengers and a CRJ-700 at 66-70 passengers would come in at 236 occupants. With airline staff it would still be just under the limit. The lower concourse departures lounge area is 5,447 square feet excluding the news/gifts retail store, restaurant and concourse. This yields an occupancy limit of 363 for the lounge areas. With other areas total occupancy is as follows:

Departures lounge	5,447 SF	15 SF/Occupant	363 Occupants
Concourse corridor	3,544 SF	100 SF/Occupant	36 Occupants
Retail	467 SF	60 SF/Occupant	8 Occupants
Restaurant	620 SF	15 SF/Occupant	42 Occupants
Occupancy			449 Occupants

Concourse circulation is calculated at 100 square feet per occupant. The news/gifts retail space is considered mercantile with an occupancy limit of eight (8) people. The restaurant's public space is considered assembly occupancy. There is seating for 22 people in this space plus queue and counter area that could reasonably accommodate another ten people standing. The remaining space would be available for people awaiting their orders so the 42 person limit is appropriate. The total occupancy for the lower concourse is calculated at 449 occupants. Total occupancy for both concourses is 685 occupants as illustrated on the following figure entitled *DEPARTURES CONCOURSE OCCUPANCY*.

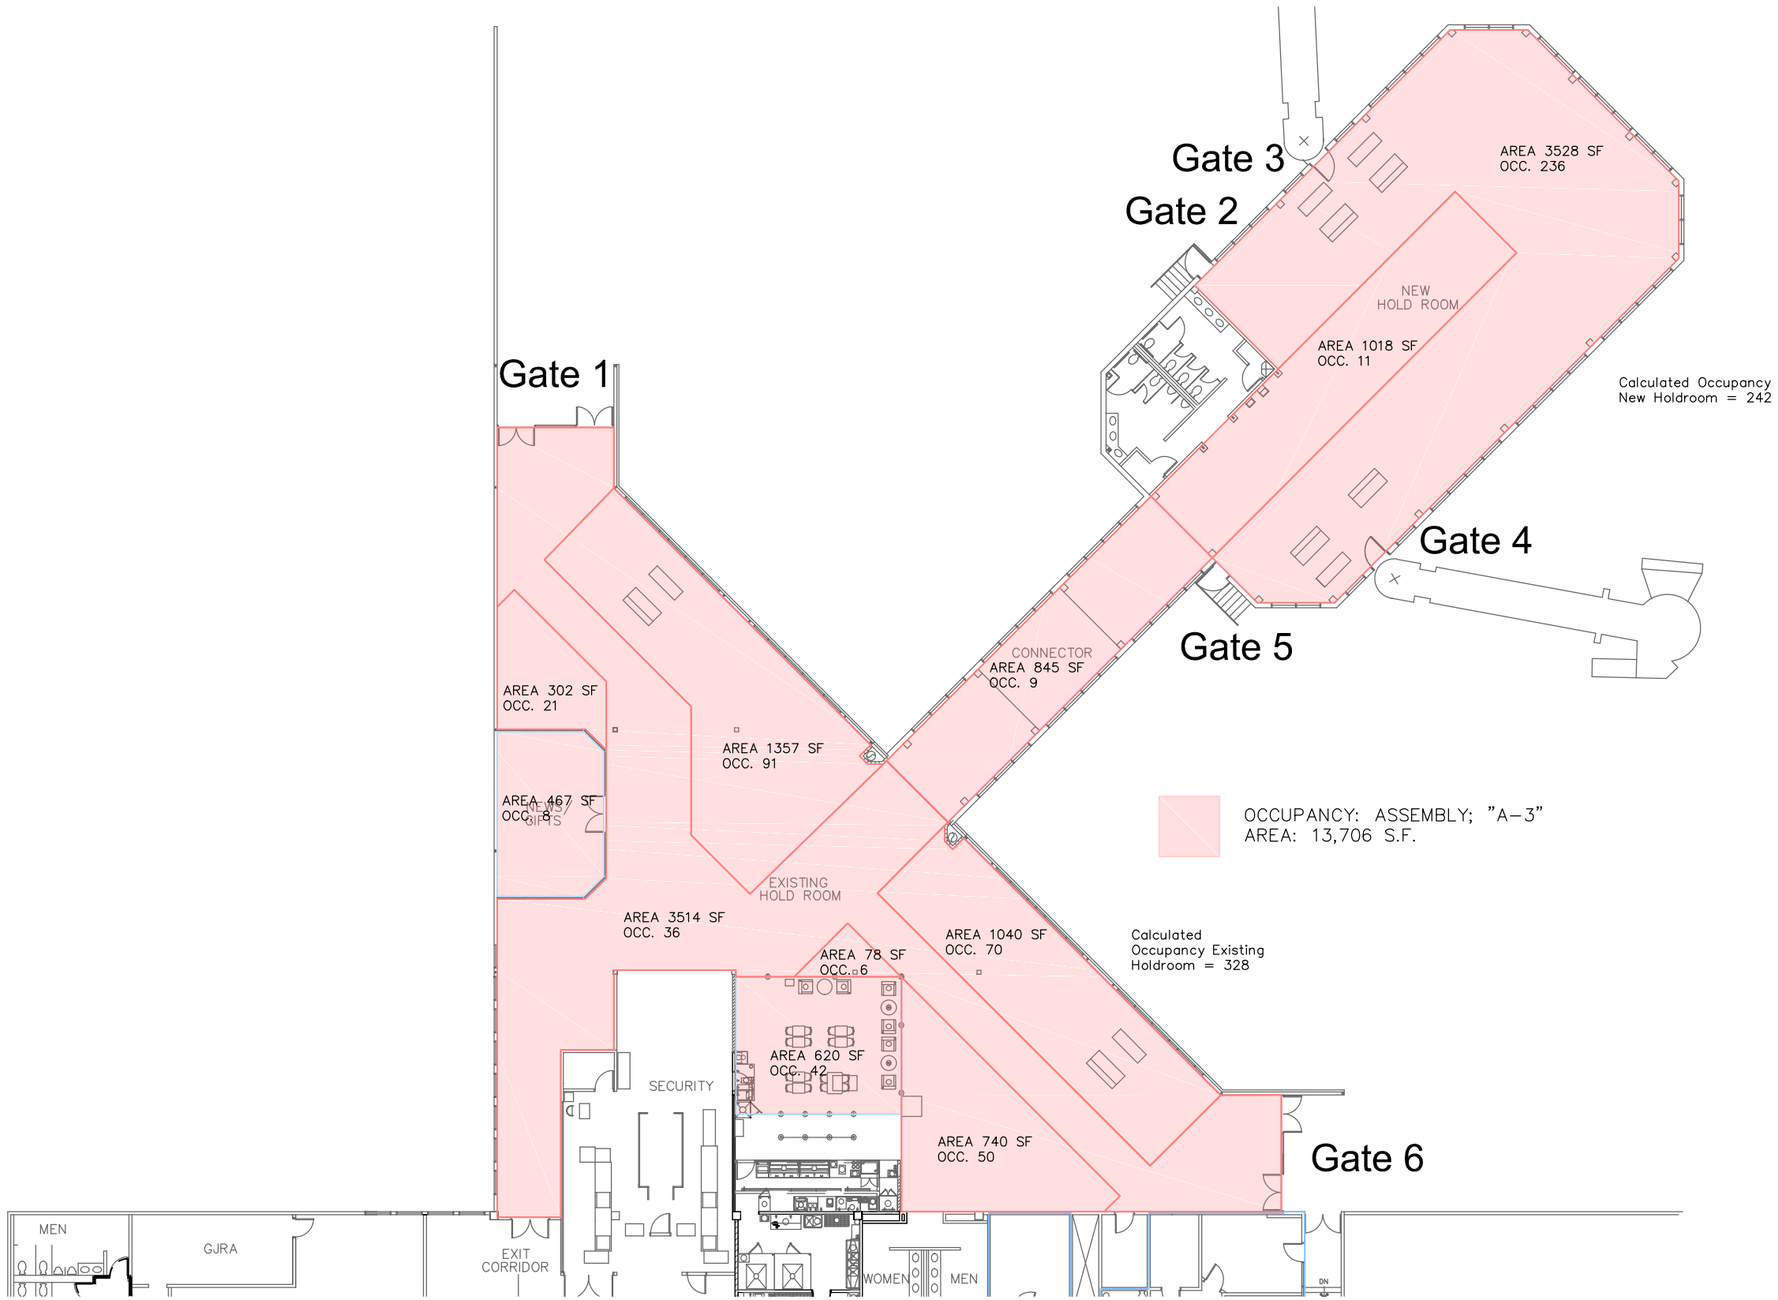

Figure 9 **Departures Concourse Occupancy**

Departures Concourse Capacity. Departures lounge passenger capacity includes a level of service factor in area per passenger that is higher than building code. The IATA industry standard for this is 18.3 square feet. The gate podiums are typically removed from the overall area which reduces the available seating area. For the upper lounge, at 3,526 square feet and deducting space for gate ticket lifts and queues (one at 342 square feet and the second at 384 square feet) yields 2,800 square feet.

Departures Lounge	2,800 SF	18 SF/Passenger	154 Seated Passengers

For the upper concourse, the Arconas seating plan shows 153 seats: 111 linear, or bench seating and 42 cluster seats.

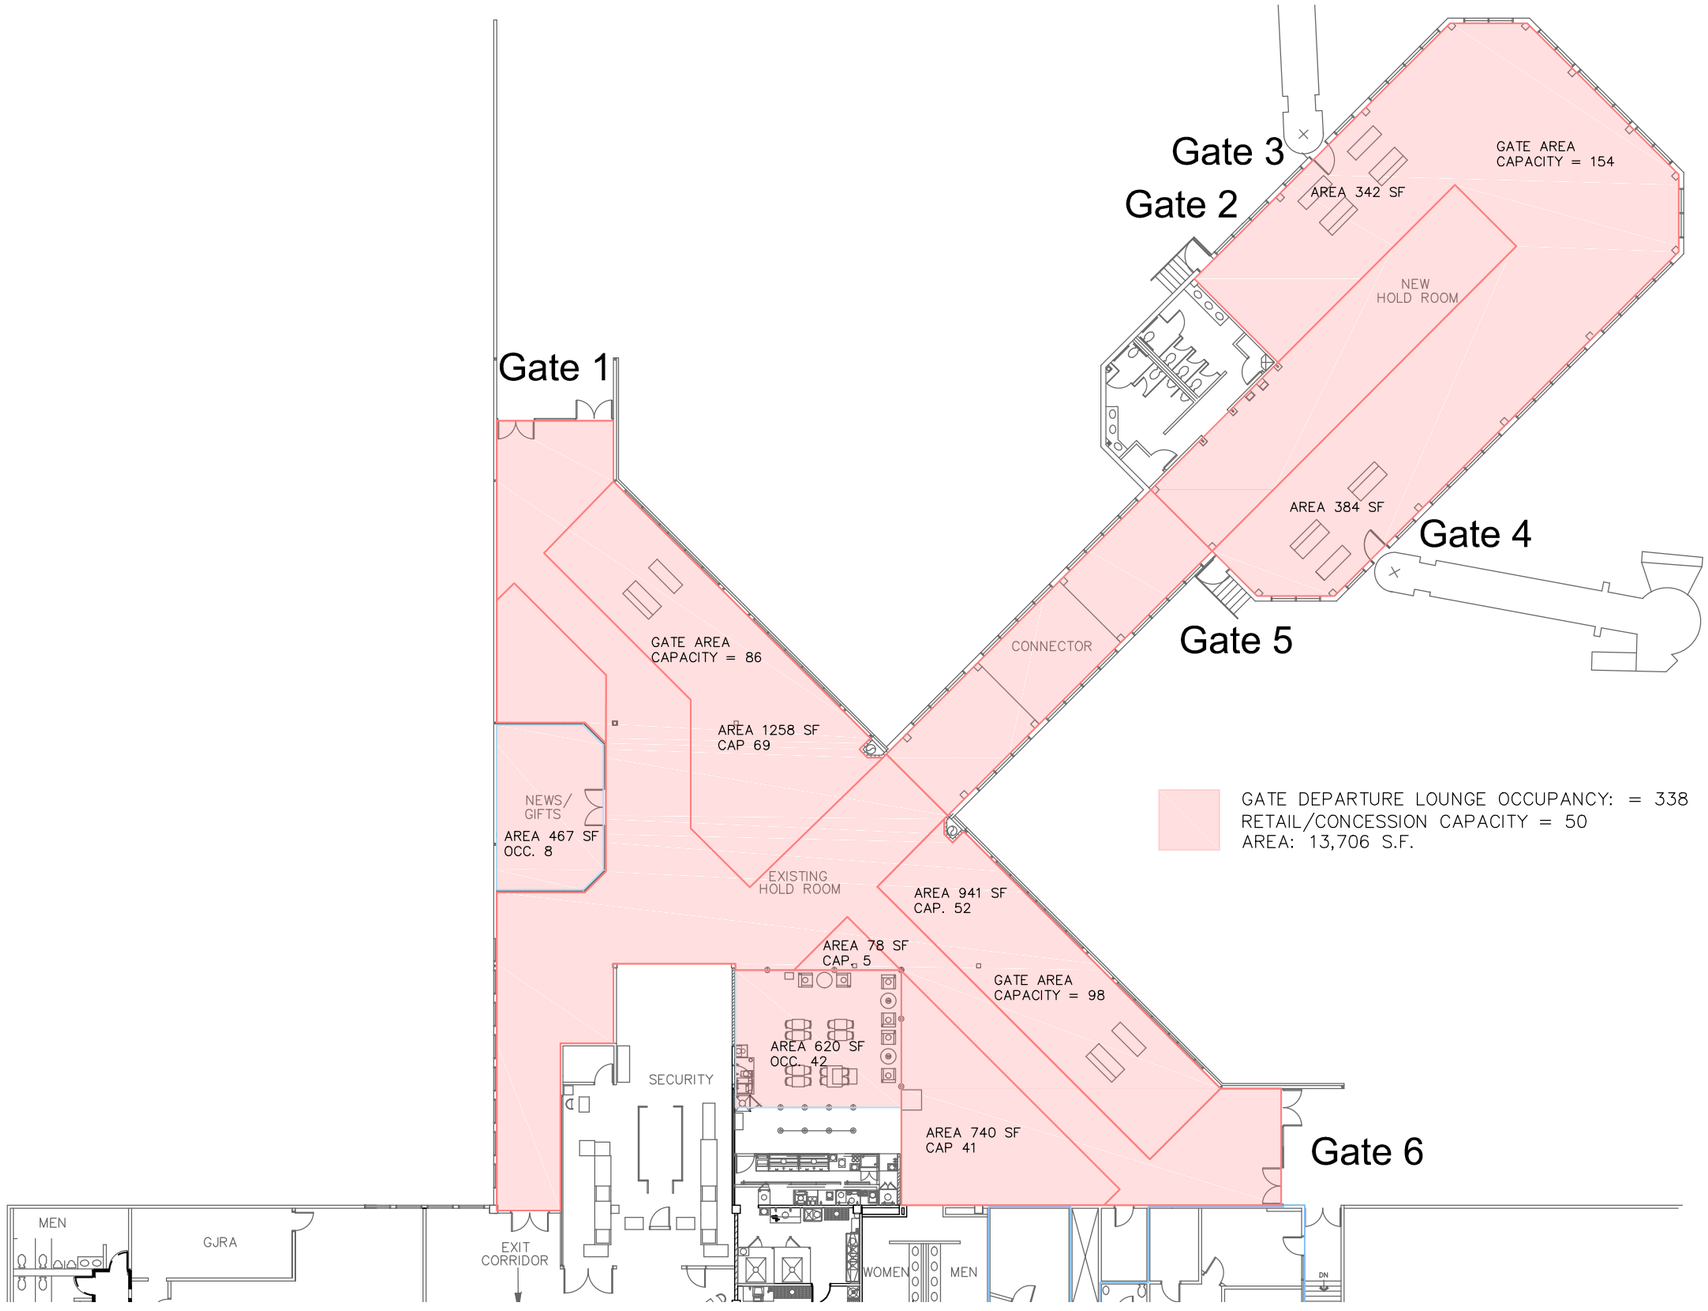
For the lower lounge, at 5447 square feet and deducting space for gate ticket lifts, queues and circulation (here there is a secondary path) yields 3,319 square feet of lounge area:

Departures Lounge	3,319 SF	18 SF/Passenger	184 Seated Passengers

Using a lower area per passenger will increase the capacity of a departures lounge. However, the lower lounge profile sets a limit for Gate 1 in which approximately 78 passengers would be seated per the Arconas layout plan. Other passengers would stand or use the retail gift store or restaurant. Another 61 passengers at Gate 6 would be seated per the Arconas plan while other passengers would stand or use restaurant space.

Total departures lounge capacity is 338 for the upper and lower departures lounges combined. There will be times when this capacity is exceeded, affecting overall level of service in the space (a lower area per passenger with more passengers standing in the concourse corridor area). Typically this is considered acceptable for brief periods of up to fifteen minutes. The capacity calculations are illustrated on the following figure entitled *DEPARTURES CONCOURSE CAPACITY*.

This is adequate capacity to accommodate both the enplaning design hour passengers of 220 and the deplaning design hour passengers of 250. However, this assumes full utilization of both the upper and lower holdrooms. In order to do so, it is recommended that the Airport consider the installation of passenger hallways/corridors leading to boarding bridges for both Gates 1 and 2.



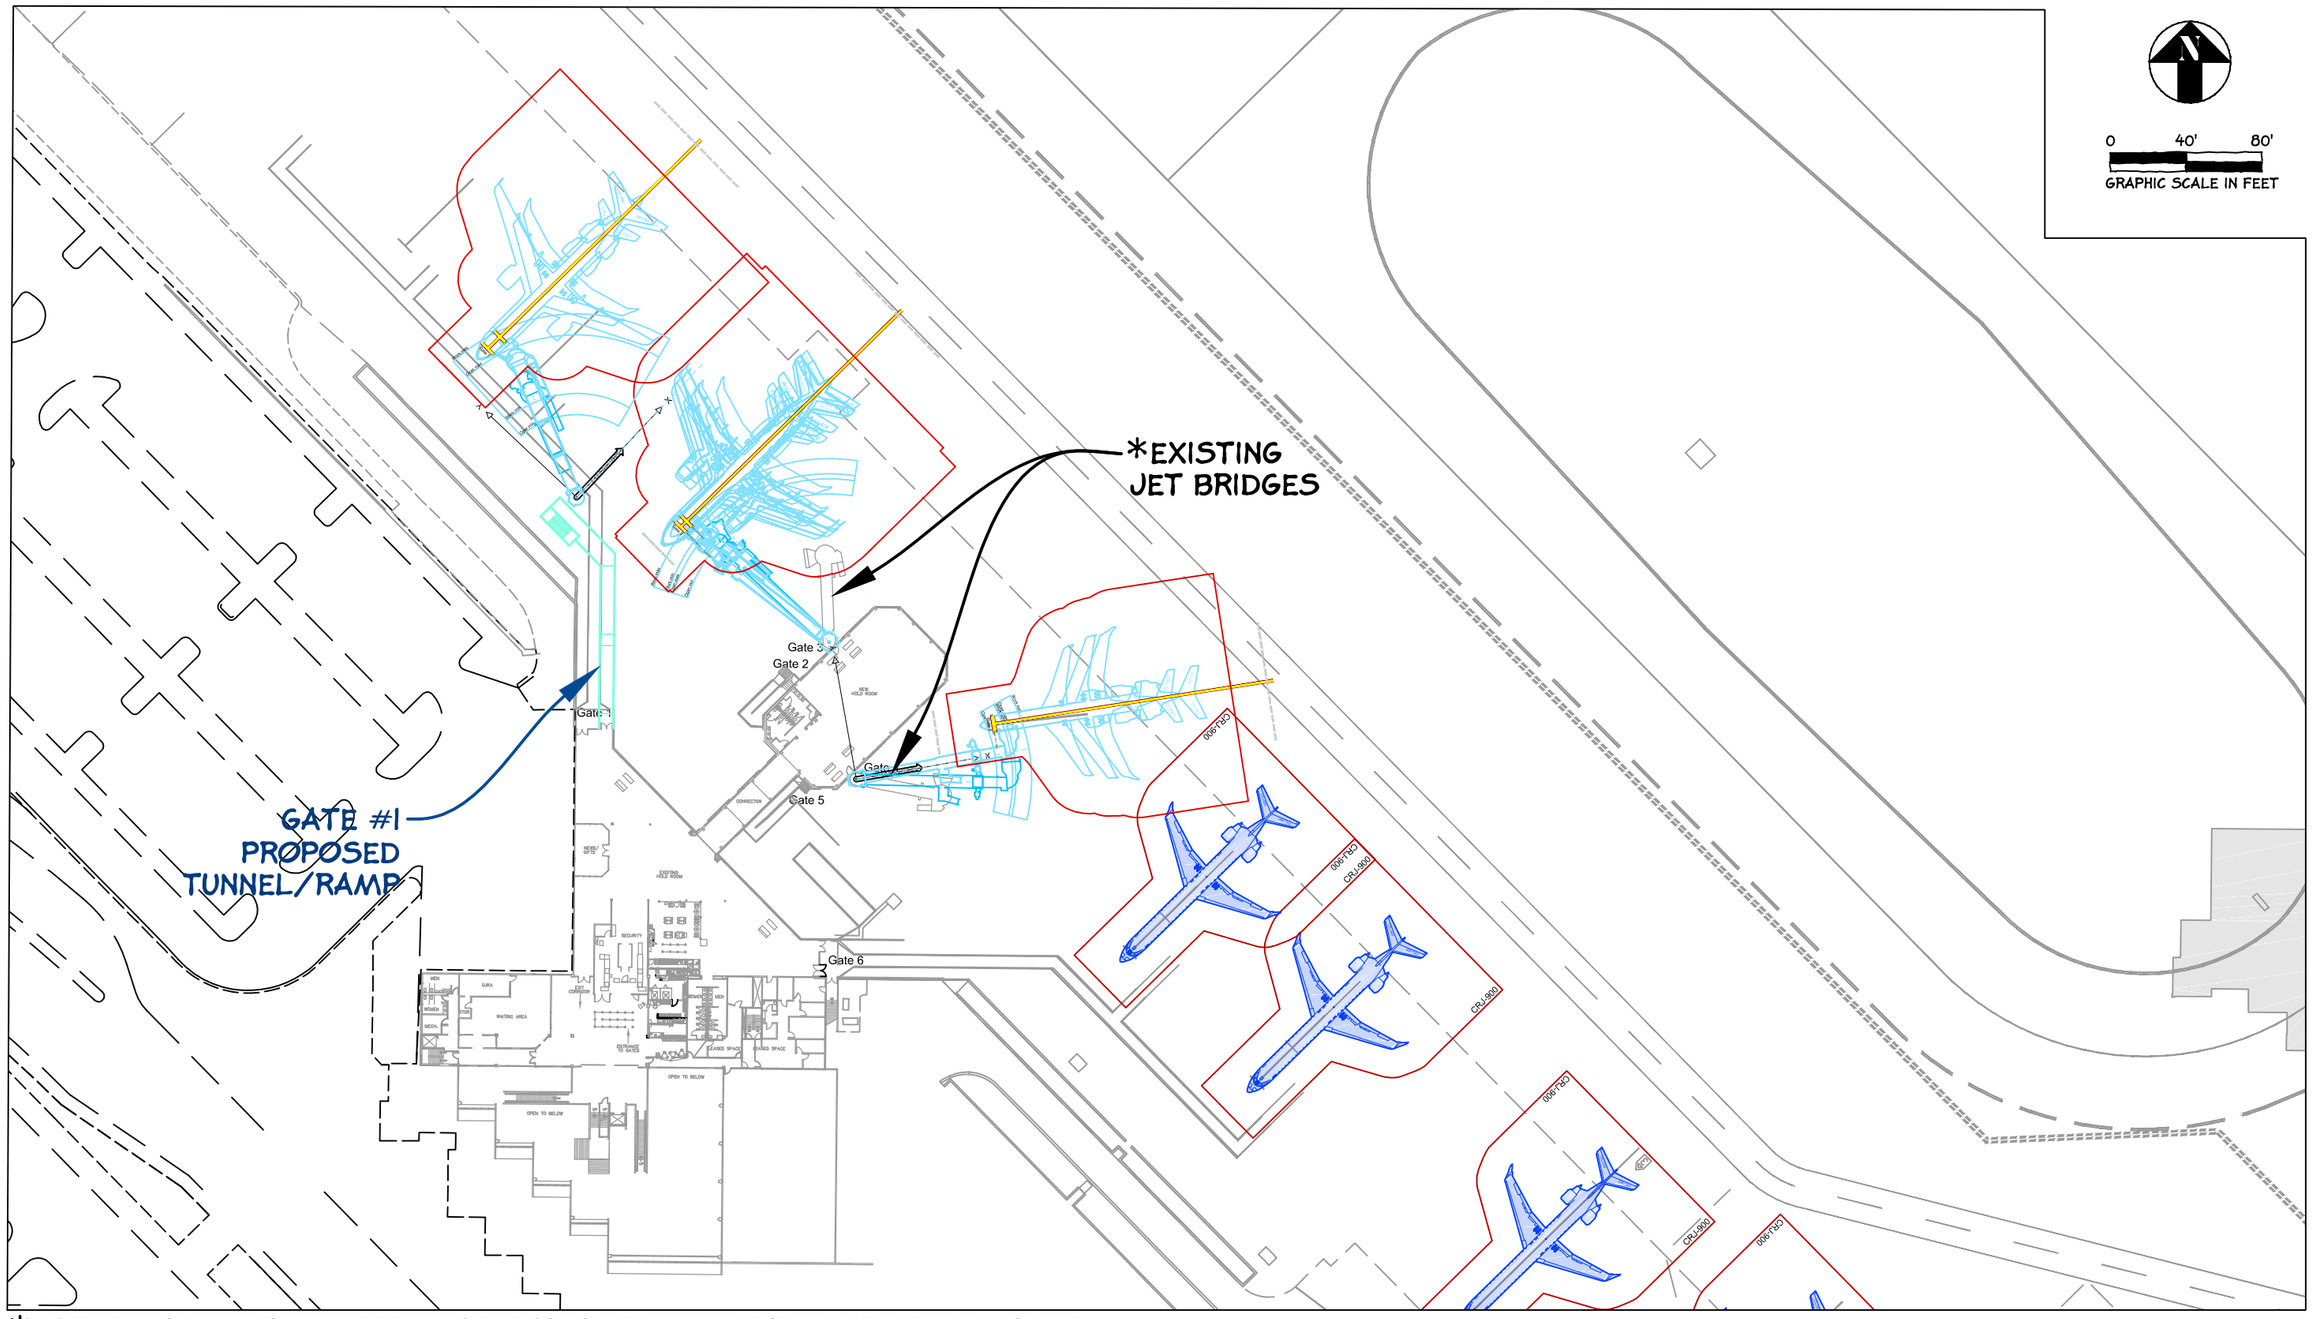


Figure 10 **Departures Concourse Capacity**

Post Security Holdroom/Gate Concepts

As mentioned previously, an additional passenger boarding bridge would increase the level of service provided to GJT passengers. It is recommended that Gate #1 be considered for the installation of a passenger boarding bridge in order to increase level of service and provide an acceptable platform for the airlines to board and disembark passengers from aircraft safely from weather and aircraft ground service operations. In order to bridge the distance from the lower departures lounge to the aircraft, a passenger boarding tunnel is recommended at Gate #1. This will serve to maintain levels of safety and comfort while also serving as ramps to the level of the passenger boarding bridge rotunda, from where passengers will then board the aircraft. A tunnel is used instead of building in order to re-use it in future aircraft gate layouts and avoid building additional structure that will be demolished within a relatively short timeframe of future replacement terminal and concourse development.

A Gate #1 boarding bridge addition enables the Airport to meet its aircraft operations growth requirements with minimum facility investment and greater flexibility through the use of passenger boarding bridges. As described previously, the lower level lounge is currently underutilized. The addition of the bridges brings passenger handling operations to a level playing field, offering all carriers an opportunity to serve their passengers with the same or similar amenities.

The Airport is also planning modifications to the boarding bridge at Gate #3 to accommodate larger aircraft. The aircraft parking position for Gate #1 will be dependent on the modifications to Gate #3. An illustration of this concept is provided in the following figure entitled *GATE #1 BOARDING BRIDGE CONCEPT*.

* - AIRCRAFT PARKING PLAN ESTIMATED BASED ON PENDING MODIFICATIONS TO THE GATE #3 BRIDGE TO ACCOMODATE A-320 AIRCRAFT.

Figure 11 **Gate #1 Boarding Bridge Concept**

Security Screening Check Point (SSCP) Concept

The existing security screening capacity at the terminal is estimated to be approximately 300 passengers an hour when both screening lanes are open. This will serve through the passenger demand for Planning Level IV noted previously and potentially further depending on development of screening technology and operations. The capacity of the machines is based on the TSA's preferred layout as shown in their checkpoint design guidelines. With additional depth not provided at the existing layout, the security lanes will generally degrade in efficiency as passengers have less space in which to reclaim their belongings and move away from the queue in order to provide space for other passengers who are undergoing screening. Another potential issue is the amount of space offered for queuing when entering the screening area. This space immediately in front of the checkpoint is limited. It also serves as the landing for passengers using vertical circulation to the third level. In reviewing the layout, passenger flow to, through and out of the checkpoint are located such that there is little crossflow of either passenger stream.

Reversing the flow into and out of the secure space is one option for addressing the queueing congestion. However, this would create crossflow congestion as passengers exiting the secure area have to cross in front of passengers who are proceeding to the checkpoint. The only way to alleviate the crossing flow would be to relocate/reposition the up and down escalators which is likely cost prohibitive. Assuming that the Airport can move toward a replacement terminal within 10 to 15 years, this improvement may not be necessary and consequently, will not be included in the interim Phase I recommendations.

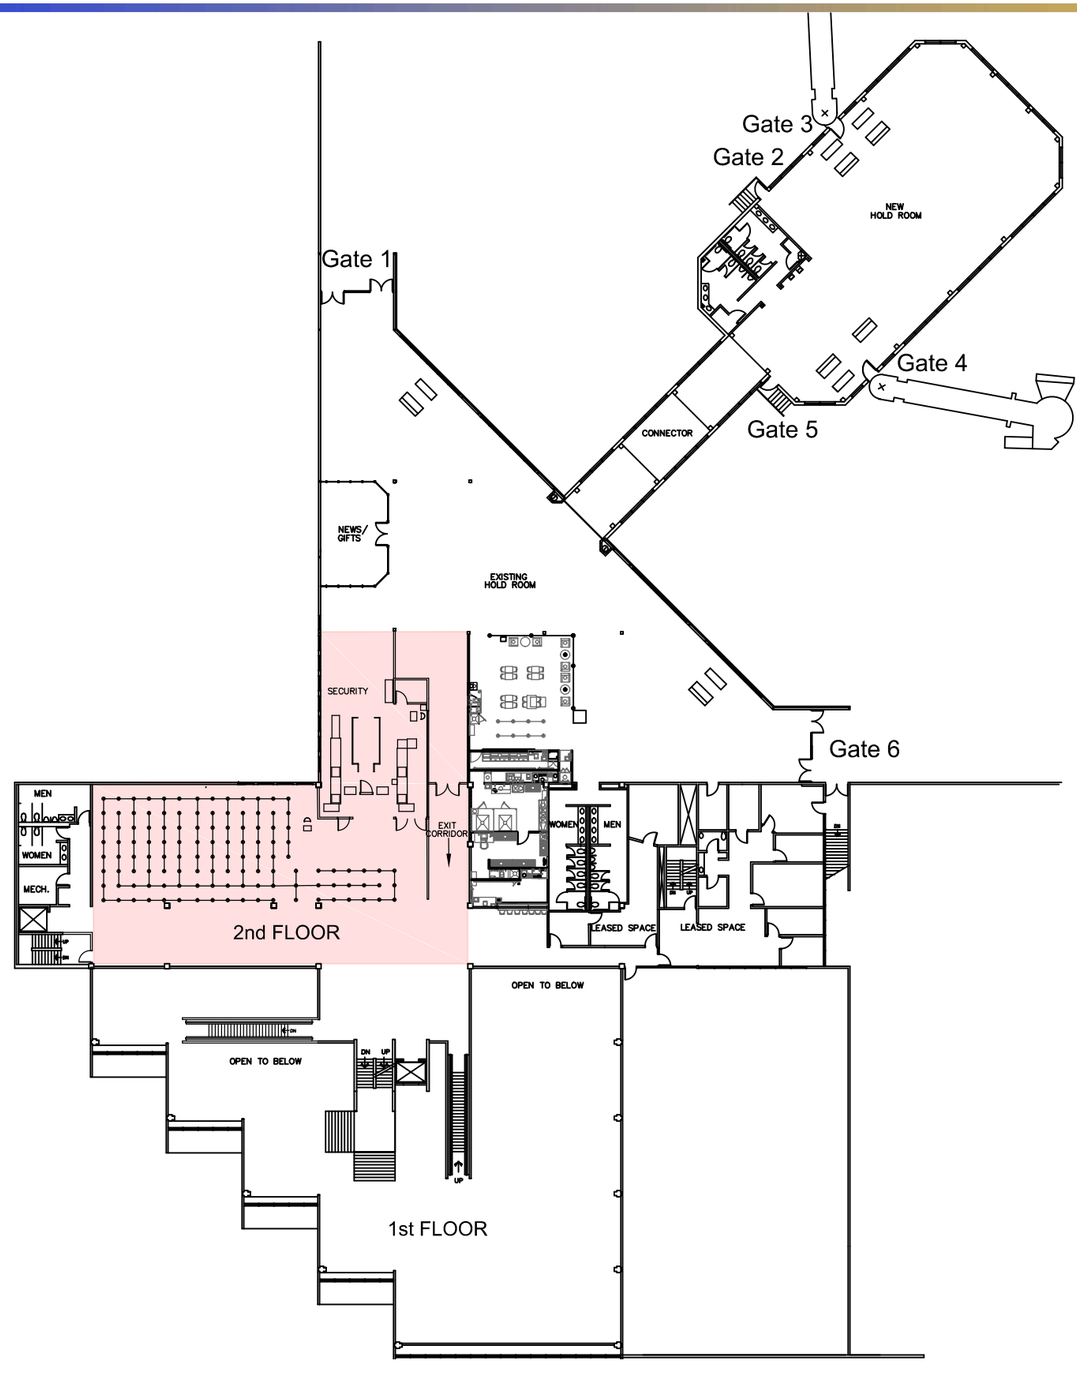

Figure 12 **SCCP Reconfiguration Concept**

Conceptual Development Plan Summary

The following illustration entitled *REVISED CONCEPTUAL DEVELOPMENT PLAN* presents an overall view of the proposed campus and redevelopment of the Grand Junction Regional Airport terminal area. This illustration also shows the proposed construction phasing including the tear down of the previous Phase I, the airport administration building and the newly developed Phase I which includes the recommendations from this Terminal Area Plan Amendment. Those recommendations shown in orange on the illustration include a remodel and renovation program for the existing terminal building, continued monitoring of structural issues, and the construction of a tunnel and passenger boarding bridge at Gate #1.

Phase II of the CDP, shown in red on the illustration include a replacement terminal, connector facility and linear concourse, a vehicle parking expansion and additional rental car facilities. Phase III, shown in green on the illustration includes removal of air cargo facilities, expansion of the existing deice pad, baggage claim and concourse expansion, as well as additional surface parking and rental car facilities. Finally, Phase IV, shown in blue on the CDP includes a long-term parking structure as well as continued expansion of rental car facilities and other terminal functions.

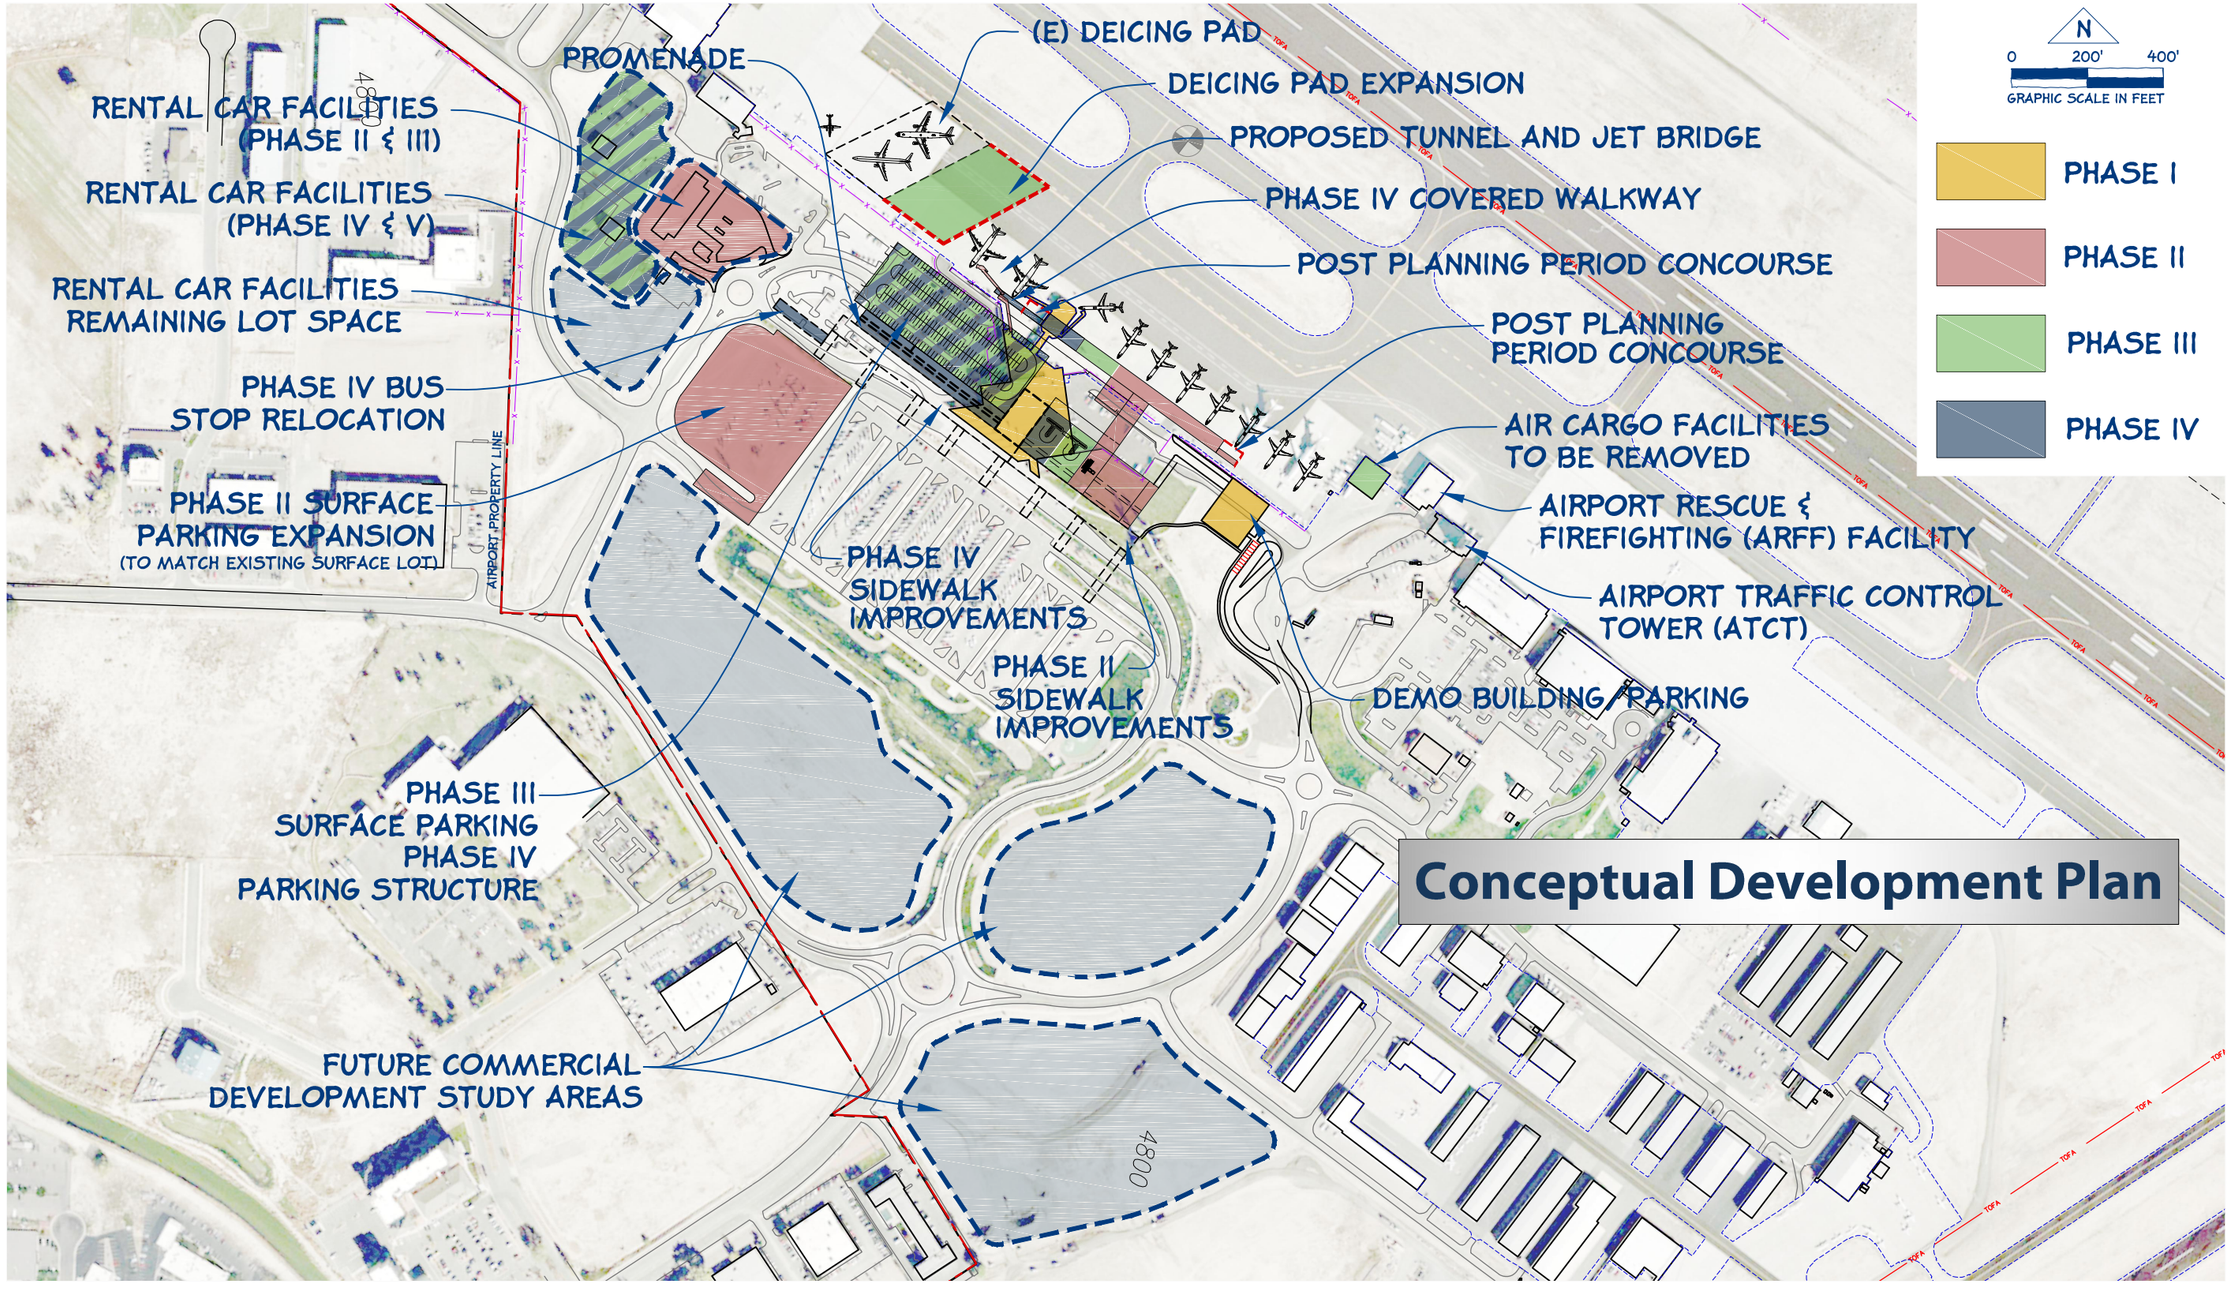

Figure 13 **Revised Conceptual Development Plan**

D. Implementation Plan

The long-term program for development within the terminal area at Grand Junction Regional Airport is presented in this chapter and is intended to establish a prudent implementation plan. Because many of the projects in this program will be implemented on an as-needed basis and only when potential funding sources have been identified, the projects are not organized into a typical year by year Capital Improvement Program (CIP) format. It is also important to note that there is no financial commitment on the part of the federal government or the Airport Sponsor to provide funding for any of these projects.

The potential improvements necessary to accommodate the future terminal area needs of the Grand Junction Regional Airport have been placed into four phases. These four phases are included in the refined Conceptual Development Plan (CDP) for the Grand Junction Regional Airport Terminal Area.

Implementation Schedule and Project List

Using the documentation previously presented regarding anticipated facility demands, a list of capital improvement projects specifically for the terminal area has been assembled. The projects are assembled into four logical phases. The first phase will be completed in 2018/2019. The remaining three phases including the replacement terminal will likely be outside of the 11-year planning period after completion of the replacement runway.

Cost Estimates

Cost estimates for individual projects, based on current construction unit costs, have been prepared for the improvement projects that have been identified as potentially being needed within the terminal area. The improvement cost estimates do not include an escalation factor and are all listed in 2017 dollars for Phase I and 2011 dollars for Phases II through IV. These estimates are intended to be used for planning purposes only and should not be construed as construction cost estimates, which can only be compiled following the preparation of detailed engineering design documents.

Table 5

DEVELOPMENT PROGRAM PROJECT COSTS

	Project Description	Total Estimated Cost
Phase I		
1	Terminal Building Mechanical Renovations including HVAC system Replacement	$4,410,400
2	Terminal Structural Foundation and Building Frame Integrity Assessment	$187,740
3	Terminal Code Compliance/Life Safety	$2,086,000
4	Terminal Roof and Escalator Replacement	$1,796,940
5	Administration Building Modifications	$1,000,000
6	Gate #1 Tunnel/Passenger Boarding Bridge	$1,800,000
7	SSCP Queue Reconfiguration (if necessary)	$750,000
8	Gate #6 Tunnel/Passenger Boarding Bridge	$1,800,000
Sub-Total/Phase I Projects		$13,831,000
PHASE II		
9	Terminal Surface Parking Expansion	$1,900,000
10	Construct Rental Car Facilities (Phase III Building and Surface Parking)	$3,500,000
11	Terminal Building Expansion – Phase II – Construct Replacement Terminal/Concourse (approximately 52,000 SF)	$26,260,000
Sub-Total/Phase II Projects		$31,660,000
PHASE III		
12	Remove Existing Air Cargo Facilities and Construct Replacement Air Cargo Apron, Vehicle Access and Parking	$6,305,000
13	Construct Rental Car Facilities (Phase IV Surface Parking)	$600,000
14	Deicing Pad Expansion	$3,500,000
15	Demo/Remove Existing Terminal Building	$302,000
16	Terminal Building Expansion Phase III – (Baggage Claim and Concourse Expansion) (approximately 15,000 SF)	$8,125,000
17	Surface Parking Expansion West of Terminal	$900,000
Sub-Total/Phase III Projects		$13,427,000
PHASE IV		
18	Terminal Building Expansion Phase IV (Baggage Claim and Concourse Expansion (approximately 15,000 SF)	$8,125,000
19	Construct Rental Car Facilities (Phase V)	$400,000
20	Relocate Bus Stop	$275,000
21	Construct Vehicle Parking Structure (900 spaces)	$19,800,000
Sub-Total Phase IV Projects		$28,600,000
TOTAL		**$87,518,080**

Note: Phase I project cost estimates in 2017 dollars, Phase II, III and IV project cost estimates in 2011 dollars.

Financial Implementation Analysis

Objectives

The primary objective of the Financial Implementation Analysis for the Terminal Area Plan Amendment is to evaluate the Airport's capability to fund the terminal area improvement projects identified in the Terminal Area Plan Amendment planned to be implemented in the 2017-2018 time frame along with the other non-terminal related projects identified in the Airport's overall Capital Improvement Program planned for implementation over an eleven-year review period from 2017 through 2028 and beyond. The Financial Implementation Plan included in this analysis presents the results of the financial evaluation and provides practical guidelines for matching an appropriate amount and timing of financial resources with the planned use of funds.

Overall Approach

The overall approach for conducting the financial implementation analysis for the Terminal Area Plan Amendment included the following steps:

- Reviewing key airport documents related to historical financial operating results, capital improvement plans, and Airport policies
- Interviewing key airport officials to gain an understanding of the existing operating and financial environment, relationships with the airlines and overall management philosophy
- Reviewing the updated aviation traffic forecast
- Reviewing the cost estimates and development schedule for the Terminal Area Plan Amendment and other Capital Improvement Program (CIP) project cost estimates and development schedules anticipated for the review period and projecting the overall financial requirements for the program
- Determining and analyzing the sources and timing of capital funds available to meet the financial requirements for operating the Airport, funding debt service requirements and financing the capital program
- Analyzing historical operations and maintenance expenses, developing operations and maintenance expense growth projection assumptions, reviewing assumptions with Airport management and projecting future operations and maintenance expenses for the review period
- Analyzing historical revenue sources, developing revenue growth projection assumptions, reviewing assumptions with Airport management and projecting future

airline and non-airline revenues for the review period

- Preparing a detailed financial projection for the eleven-year review period that includes capital expenditures, capital funding, revenues, expenses and cash flow

- Completing results of the review in a Financial Plan Summary that provides conclusions regarding the Airport's capability to finance the planned capital improvement program.

Capital Funding Sources

In the past, the Airport has used a combination of FAA Airport Improvement Program (AIP) entitlement and discretionary grants, Colorado DOT grants, debt proceeds, passenger facility charges, rental car customer facility charges, and cash reserves/net operating revenues to fund capital improvements. These funding sources will continue to be important to finance the Airport's Terminal Area Plan Amendment and Capital Improvement Program (CIP) during the eleven-year review period.

Airport Improvement Program Grants

The Airport receives grants from the Federal Aviation Administration (FAA) to finance the eligible costs of certain capital improvements. These federal grants are allocated to commercial passenger service airports through the Airport Improvement Program (AIP). AIP grants include passenger entitlement grants, which are allocated among airports by a formula that is based on passenger enplanements and discretionary grants which are awarded in accordance with FAA guidelines. In February 2012, after several years of continuing budget resolutions in Congress, the FAA Modernization and Reform Act of 2012 was enacted and authorized funding for the AIP through September 30, 2015. The Act was extended to provide AIP funding at current levels through September 2017. Before the Act expired at the end of September, Congress extended FAA's funding and operational authority for another six months through March 2018. Under current AIP authorization legislation, eligible projects are funded on a 90% AIP grant/10% local match basis for small and non-hub airports. Under this authorization, the Airport is projected to receive current entitlements of about $1.9 million in 2017 and future annual grants which are projected to grow to $2.3 million by 2027. Non-Hub airports (those with annual enplanements up to about 410,000 passengers) can accumulate and carryover up to three years of unspent entitlements plus the current year before the awards are revoked. In 2017, the Airport had approximately $4.5 million in unspent entitlements to carryover for use in 2017.

The approval of AIP discretionary funding is based on a project eligibility ranking method the FAA uses to award grants, at their discretion, based on a project's priority and importance to the national air transportation system. In the past, Grand Junction has received discretionary funding support for various eligible capital projects. It is reasonable

to assume that the Airport will receive additional discretionary funding during the planning period for higher priority, eligible projects, such as runway, taxiway and aircraft apron projects. The implementation analysis assumes the application of AIP discretionary funds every year of the eleven-year review period and will range from $2.3 million to over $12.6 during any given year. Since the future availability of AIP discretionary grants is not certain until an actual grant is awarded, it should be noted that any CIP projects which have discretionary funds indicated as a funding source in the implementation plan may need to be delayed until such funds actually become available.

The implementation analysis further assumes that the current AIP program will continue to be extended through 2027 and beyond and that future program authorizations will provide substantially similar funding levels as it currently does and as it has historically provided since the program was established in 1982.

Colorado Department of Transportation Grants

The Colorado Department of Transportation (CDOT), Division of Aeronautics provides Discretionary Aviation Grants for airport projects from a portion of the state sales tax collected on aviation fuel. Grants are approved for projects including those that are AIP eligible, aviation pavement maintenance projects and various other aviation projects. For AIP eligible projects, state grant awards for up to 50% of an airport's local match requirement are allowed. Non-Revenue producing projects that are not AIP eligible (but are still eligible for state funding) may also receive up to 80% funding (with a 20% local match) for the total cost of approved projects. In past years, an estimated limit of about $400,000 per year in state grants was awarded to Colorado airports supported by the Division. More recently the limit has been about $150,000 per year to better fit the trends in lower fuel prices that have reduced the amount of funds the state has available for grants. The grants from the State Aeronautics are anticipated to partially fund a number of projects included in the CIP contributing to the efforts to relocate Runway 11-29. In 2017, the State Aeronautics Grant is anticipated to provide $355,273 for selected high priority projects. Beginning in 2018, the CDOT grants are anticipated to range from $125,000 to 150,000 annually.

Debt Financing

Debt financing is often used by airports to fund capital improvement projects. The type and term of debt financing is dependent on the airport and its governing body. The financial implementation analysis includes just over $9,000,000 of debt proceeds available in 2016-2017 to support the terminal building renovation project. The debt (General Airport Revenue and Refunding Bonds, Series 2016A and 2016B) were issued for twenty years at an average interest rate of about 3.35%. Annual debt service payments of approximately $1.5 million will be funded through a combination of passenger facility charges and net operating cash flows.

Passenger Facility Charges

The Aviation Safety and Capacity Expansion Act of 1990 established the authority for commercial service airports to apply to the FAA for imposing and using a Passenger Facility Charge (PFC) of up to $3.00 per eligible enplaned passenger. With the passage of AIR-21 in June 2000, airports could apply for an increase in the PFC collection amount from $3.00 per eligible enplaned passenger to $4.50. The proceeds from PFCs are eligible to be used for AIP eligible projects and for certain additional projects that preserve or enhance capacity, safety or security; mitigate the effects of aircraft noise; or enhance airline competition. PFCs may also be used to pay debt service on bonds (including principal, interest and issue costs) and other indebtedness incurred to carry out eligible projects. In addition to funding future planned projects, the legislation permits airports to collect PFCs to reimburse the eligible costs of projects that began on or after November 5, 1990.

The Airport currently collects PFC revenues in an approved open application and is planning to submit an additional application to continue collection without interruption of its collection authority. Current collections are over $900 thousand per year and are anticipated to grow to $1.2 million by 2027. The implementation analysis assumes that the Airport will submit additional PFC applications and amendments, as required, to ensure that the collection of PFC revenues continues beyond the authorized expiration date through the end of the eleven-year review period in 2027. The implementation analysis further assumes that PFCs will be used to fund both PFC related debt service as well as capital costs on a pay-as-you-go basis. Of the $18 million in PFC collections anticipated during the review period, approximately $1.8 million will fund capital costs and the remaining $16.2 will fund debt service requirements for PFC eligible projects pledged with PFC revenues.

Rental Car Customer Facility Charges

In the last several years, rental car Customer Facility Charges (CFCs) have become common financing tools for landside improvements at airports in the U.S. Such charges are collected by rental car companies that provide services to commercial passengers at the airports they serve. CFCs are collected by the rental car companies on behalf of, and for the benefit of, the airports where they operate. The charge is typically based on a fee per rental car transaction day that is added to rental car contracts.

The CFC fee is to be used to support the planning, design and construction of various landside and passenger terminal improvements at the Airport including facilities used by the rental car companies as well as for other valid Airport purposes. Currently, CFC revenue is pledged to fund the debt service requirements on the 2009 Colorado State Infrastructure Bank loan that was obtained to build the rental car parking and fuel facilities used by the rental car companies. That loan will be fully repaid in 2019. In 2020, CFCs are programmed to fund a $1.16 million rental car capital improvement project. Beyond these uses identified, the implementation analysis does not apply CFCs to fund specific capital

projects. Instead, the analysis assumes that CFCs will be used to support the cash flow needs of the overall capital program. Current collections are approximately $579,000 per year growing to about $713,000 per year by the end of review period. The capital financial plan projects that approximately $6.9 million in CFC revenue will be available to support cash flow during review period.

Cash Reserves/Airport Net Operating Revenues

The implementation analysis indicates that net operating cash flows are projected to range from $1.2 million to $2.7 million annually during the review period through 2027. At the beginning of 2017, the Airport had accumulated about $7.5 million in unrestricted cash reserves available for operations and capital project funding. The implementation analysis assumes that, after funding any annual debt service requirements, Airport cash reserves/net operating cash flow will be used throughout the review period to fund about $21.9 million project costs (local grant match requirements and project components ineligible for federal funding) during eleven-year review period.

Financial Analysis and Implementation Plan for the Terminal Area Plan Amendment and Capital Improvement Program

This analysis, along with the Schedules presented at the end of Section D, provides the results of evaluating the financial reasonableness of implementing the Terminal Area Plan Amendment and Capital Improvement Program during the planning period from 2017 through 2027.

The capital improvement projects included in this analysis generally focus on two primary categories of infrastructure. The majority of the costs included in the capital improvement program during the eleven-year review period are airfield related projects including runway, taxiway, aircraft apron and navigational aide improvements. As the Airport focuses on the need to relocate their primary runway, a significant portion of the Airport's capital funding sources are utilized toward those projects.

The other category of projects are those related to the Terminal Building Improvements, which are the subject of this Terminal Area Plan Amendment. As described in the previous sections, the original Terminal Area Plan envisioned the replacement of the existing passenger terminal building with a new passenger terminal building. For reasons previously discussed, the timing of the new passenger terminal has been delayed beyond the review period included in this analysis. New, short-term improvements to the existing terminal building have been identified with the goal of bridging the gap until such time a replacement terminal is financially feasible. Therefore, the financial implementation analysis included in this Terminal Area Plan Amendment has removed the terminal related projects associated with the replacement terminal and included those projects identified as being needed to the

existing terminal building during this eleven-year review period.

Estimated Terminal Related Projects Development Costs

Detailed capital cost estimates for planned improvements in the Terminal Area Plan Amendment are presented in Table 5 of Section D. The projects listed in Table 6 below reflect those identified in the Terminal Area Plan Amendment as needing to be accomplished within the review period. Estimates are based on 2017 dollars with no adjustments for future inflation.

Table 6
Estimated Terminal Related Projects Development Costs

Terminal Related Projects and Components	Total Estimated Costs	PFC Funding	Cash Reserves/Net Revenues Funding
Terminal Building Renovations and Rehabilitation	$8,500,000	$5,100,000	$3,400,000
Mechanical renovations	$4,400,000	$2,640,000	$1,760,000
Structural Foundation and Frame Integrity	$200,000	$120,000	$80,000
Code Compliance/Life Safety	$2,100,000	$1,260,000	$840,000
Roof and Escalator Replacements	$1,800,000	$1,080,000	$720,000
Administration Building Modifications	$1,000,000	$0	$1,000,000
Gate #1 Tunnel/Passenger Boarding Bridge	$1,800,000	$1,800,000	$0
TOTAL Terminal Related Project Cost	$11,300,000	$6,900,000	$4,400,000

Note: Addition errors are due to rounding of calculated amounts.
Source: Leibowitz & Horton AMC Analysis.

Estimated Project Costs and Development Schedule

The Terminal Area Plan Amendment and Capital Improvement Program (CIP) Estimated Project Costs and Development Schedule is derived from the results of the Terminal Area Plan Amendment analysis and previously completed capital planning studies. The CIP for capital expansion and improvement projects is projected on an annual basis for the review period from 2017 through 2027, and in total for the period from 2028 and beyond. For each of these review periods, Schedule 1 (provided at the end of Section D) presents the Capital Improvement Program including estimated costs and anticipated development schedule for the identified projects.

As shown in Schedule 1, the total estimated cost of projects is $157,319,322 in 2017 dollars. The estimated costs for projects scheduled during the period 2017 through 2027 are adjusted by an assumed 3% rate of annual inflation. The resulting total project costs escalated for inflation are $190,751,455. Table 7 presents a summary of the Schedule and provides a

comparison of 2017 base year costs with escalated costs adjusted for inflation for stages within the review period.

Table 7
Summary of 2017 Base Year and Total Escalated Costs for the Terminal Area Plan Amendment and Capital Improvement Program

Review Periods	2017 Base Year Costs	Total Escalated Costs
Projects 2017-2021	$65,069,322	$57,813,758
Projects 2022-2027	$62,900,000	$78,468,094
Projects 2028 and Beyond	$39,350,000	$54,469,603
TOTAL Project Cost	$157,319,322	$190,751,455

Note: Addition errors are due to rounding of calculated amounts.
Source: Leibowitz & Horton AMC Analysis.

Sources and Uses of Capital Funding

Funding sources for the CIP depend on many factors, including AIP and PFC project eligibility, the ultimate type and use of facilities to be developed, management's current and desired levels of the Airport's airline cost per enplaned passenger, the availability of other financing sources and the priorities for scheduling project completion. For planning purposes, assumptions were made related to the funding source of each capital improvement.

Schedule 2 lists each of the CIP projects, their estimated costs (escalated annually for inflation) and the assumed funding sources and amounts. During the eleven-year review period, it was assumed that both AIP entitlement and discretionary grants would primarily fund airfield projects including runway/taxiway rehabilitation, aircraft parking aprons, and various eligible improvements toward the ultimate relocation of the runway and taxiways. It was assumed that CDOT aviation grants would provide a portion of the funding for AIP eligible projects. Debt proceeds are anticipated to fund costs related to the terminal renovation and rehabilitation project as well as primary runway relocation project. PFC pay-as-you-go revenues were assumed to fund the Gate #1 tunnel and passenger boarding bridge project. Rental Car Customer Facility Charges and available cash reserves were assumed to fund the rental car project programmed in 2020, a portion of the local match on AIP projects as well as projects ineligible for other funding sources.

A summary of the sources of capital funding by type and uses of capital funding by review period for the CIP is presented in Table 8.

Table 8

Summary of Sources and Uses of Capital Funding for the Terminal Area Plan Amendment and Capital Improvement Program

Sources of Capital Funding	2017-2021	2022-2027	2028 & Beyond	TOTALS
AIP Entitlement Grants	$14,493,197	$13,217,446	$9,713,359	$37,424,003
AIP Discretionary Grants	$24,299,270	$57,403,838	$39,309,283	$121,012,391
CDOT Aviation Grants	$882,223	$900,000	$600,000	$2,382,223
Debt Financing	$5,100,000	$0	$0	$5,100,000
Passenger Facility Charges	$1,800,000	$0	$0	$1,800,000
RAC Customer Facility Charges	$1,160,000	$0	$0	$1,160,000

Projected Operations and Maintenance Expenses

Operations and Maintenance Expense Projection Assumptions. Operations and maintenance expense growth assumptions, as reflected in Schedule 3, were developed to project the Airport's operating expenses during the planning period. Actual amounts for 2014 through 2016 and budgeted amounts for 2017 provide a comparison with expenses that are projected for the period 2018 through 2027. For each of the following expense categories listed below, projections are based on 2017 budgeted amounts with an assumed 3% annual rate of inflation beginning in 2018.

- Personnel Compensation and Benefits
- Communications and Utilities
- Supplies and Materials

- Contract Services
- Repairs & Maintenance
- Insurance
- Other

Minor capital outlay projections are also based on the 2017 budgeted amounts with an assumed 3% annual rate of inflation beginning in 2018.

Projection of Operations and Maintenance Expenses and Operating Expenses Per Enplaned Passenger. The projection of operations and maintenance expenses including minor capital outlays is provided in Schedule 3. As shown in the Schedule, total expenses are expected to grow from $4,822,559 budgeted in 2017 to $6,481,116 in 2027 reflecting an overall growth rate of 3% per year and a total of $61,766,350 during the review period.

Schedule 3 also provides a comparison of the Airport's total operating expenses per enplaned passenger versus an average of non-hub airports with similar levels of aviation activity. Based on an estimated 3% annual rate of passenger growth along with a 3% annual growth rate of operating expenses, the Airport's operating expenses per enplaned passenger are projected to remain at $20.76 for the duration of the review period. Over the same period of time, the overall non-hub industry average grows from $48.98 in 2017 to $57.03 in 2027 (Source: Non-Hub airports, FAA Operating and Financial Summary Report #127 and FAA Air Carrier Activity Information System enplanement database). These comparisons show that budgeted and projected operating expenses at Grand Junction are substantially lower than other non-hub airports of similar size during all of the eleven-year review period. This implies that the Airport currently manages operations and controls expenses in a manner that is much more cost efficient than other comparable non-hub airports.

Projected Operating Revenues

Operating revenue projections for the eleven-year review period are based on the Airport's 2017 budget, current rates and charges methodology, current leasing practices, the anticipated impacts of inflation, aviation traffic increases, facility expansions and the recent experience of other airports with similar levels of aviation activity.

Operating Revenue Projection Assumptions. Operating revenue growth assumptions, as reflected in Schedule 4, were developed to project the Airport's operating revenues during the planning period. Actual amounts for 2014 through 2016 and budgeted amounts for 2017 provide a comparison with revenues that are projected for the period 2018 through 2027. This analysis organizes revenues into categories for airline revenues, non-airline revenues and non-operating revenues. Annual revenue growth assumptions for the period 2018 through 2027 are provided in the following sections.

- Airline Revenues

- Airline landing fee projections beginning in 2018 are based on the Airport's 2017 budget with growth at a 3% annual inflation rate plus increases in aircraft landed weight using annual growth at ½ the rate of forecast passenger enplanements. This reflects the airlines' practice of managing increased load factors before additional flights are provided.

- Airline terminal rent projections beginning in 2018-2019 are based on the Airport's 2017 budget with growth at a 3% annual inflation rate thereafter.

- The projections for Airline other fees, which include charges for use of the boarding bridges and deicing services, are based on the Airport's 2017 budget with growth at a 3% annual inflation rate thereafter.

- Non-Airline Revenues

  - Cargo Landing Fees, Fuel Flowage Fees, and State Aviation Fuel Tax Excise Tax revenue projections beginning in 2018 are based on the Airport's 2017 budget with growth at a 3% annual inflation rate plus increases in aircraft landed weight using annual growth at ½ the rate of forecast passenger enplanements.

  - Non-Airline revenue projections beginning in 2018 for the following categories are based on the Airport's 2017 budget with growth at a 3% annual inflation rate plus the annual rate of forecast enplanement growth:
    - Rental Car Concession Fees
    - Terminal – Restaurant Concession Fees
    - Terminal – Retail Concession Fees
    - Parking & Ground Transportation Fees

  - Non-Airline revenue projections beginning in 2018 for the following categories are based on the Airport's 2017 budget with growth at a 3% annual inflation rate thereafter:
    - Cargo and Hangar Rentals
    - Other General Aviation Fees
    - Land and Building Leases
    - Rental Car Space Rent
    - Terminal – Other Rent
    - Other Revenues

- Non-Operating Revenues - Non-Operating revenue projections beginning in 2017 for Interest Income are based on the Airport's 2017 budget with no annual inflation growth thereafter.

Projection of Operating Revenues, Airline Cost Per Enplaned Passenger and Operating Revenues Per Enplaned Passenger. The projection of operating revenues is provided in Schedule 4 at the end of Section D. As shown in the Schedule, airline revenues are expected to grow from $1,768,700 budgeted for 2017 to $2,453,461 projected for 2027 with a total of $22,921,545 during the eleven-year review period. The overall annual growth rate for airline revenues is 3.3% during the eleven-year review period. Non-Airline revenues are expected to grow from $4,309,084 budgeted for 2017 to $6,732,452 projected for 2027 with a total of $60,842,675 during the review period. The overall annual growth rate for non-airline revenues is 4.6%. Total airport revenues (including non-operating revenues) are expected to grow from $6,096,984 budgeted for 2017 to $9,205,112 projected for 2027 with a total of $83,975,420 during the review period. The overall annual growth rate for total Airport revenues is 4.2%.

Schedule 4 also provides a comparison of the Airport's airline cost per enplaned passenger (CPEP) versus an average for overall non-hub airports with similar levels of aviation activity. The airline CPEP (all airline fees and rentals divided by enplaned passengers) is a measure airlines use to compare their cost of operations among the airports they serve. Grand Junction's airline CPEP is projected to grow from $7.61 budgeted for 2017 to $7.86 projected for 2027. Over the same period, the overall non-hub industry average grows from $9.20 in 2017 to $12.37 in 2027 (Source: Non-Hub airports, FAA Operating and Financial Summary Report #127 and FAA Air Carrier Activity Information System enplanement database). These comparisons show that airline rates and charges at Grand Junction are currently lower than other similar non-hub airports and are expected to remain lower throughout the review period. The Airport's lower level of CPEP suggests that rate-setting practices and the overall structure of rates and charges could be revised to enable the Airport to recover a greater portion of its operating costs from the airlines that serve Grand Junction.

Schedule 4 also provides a comparison of the Airport's total revenue per enplaned passenger versus an average for other non-hub airports. The Airport's total revenue per enplaned passenger is projected to grow from $26.17 budgeted for 2017 to $29.43 projected for 2027. Over the same period, the overall non-hub industry average grows from $46.92 in 2017 to $63.05 in 2027 (Source: Non-Hub airports, FAA Operating and Financial Summary Report #127 and FAA Air Carrier Activity Information System enplanement database). These comparisons show that non-airline revenues along with airline revenues are substantially lower than the non-hub industry average throughout the review period. This indicates that the Airport's overall policies for setting/negotiating user fees and rental rates could be reviewed and adjusted over time in order to establish rates that are more comparable with other airports having similar levels of aviation activity.

Financial Plan Summary for the Master Plan Capital Improvement Program

The Financial Plan Summary presented in Schedule 5 at the end of Section D includes a

Capital Cash Flow section that presents a summary of projected capital funding (from Schedule 2) and scheduled capital expenditures (from Schedule 1) with the cash flow that results from implementing the Terminal Area Plan Amendment and Capital Improvement Program. Schedule 5 also includes an operating cash flow section that summarizes totals for operating revenues (from Schedule 4) and operating expenses (from Schedule 3) with the addition of beginning cash reserve balances to provide the cash flow that results from these activities.

In Schedule 1 of the financial implementation analysis, practical approaches were provided for scheduling capital expenditures to match the availability of capital funding. Schedule 2 provided practical approaches for matching specific capital funding sources with each of the identified projects. As shown in Schedule 5, positive year end cash reserves are projected throughout the eleven-year planning period 2017 to 2027.

Based on the assumptions underlying the financial implementation analysis summarized in the Capital Cash Flow section of Schedule 5, implementation of projects in the Terminal Area Plan Amendment and Capital Improvement Program that are scheduled throughout the eleven-year planning period are projected to be financially reasonable. Implementation of airfield capital projects during the 2017-2027 planning period that have AIP discretionary grants indicated as a funding source are subject to the availability of those grants which are provided at the sole discretion of the FAA. If the identified portion of discretionary funding is not awarded by the FAA, then these projects will need to be delayed until funding is available.

Additionally, the financial implementation analysis relies on achievement of the aviation activity and passenger enplanement forecast. Actual aviation traffic may temporarily vary from the projected levels of activity without a significant adverse impact on the capital program. If decreased traffic levels occur and persist, implementation of all the proposed projects may not be financially feasible. It should also be noted, however, that if the forecast activity levels are not met, then a number of the planned capital improvements may not be necessary.

Financial Analysis Schedules

Financial analysis **Schedules 1** through **5** are presented on the following pages.

Ordinance No. 3679

Grand Junction Regional Airport | Master Plan Update

Institutional and Civic Facility Master Plan Review Application

GRAND JUNCTION REGIONAL AIRPORT

ORDINANCE NO. 3679

AN ORDINANCE ESTABLISHING STANDARDS FOR THE PLANNED DEVELOPMENT (PD) ZONE DISTRICT FOR PROPERTY OWNED BY THE WALKER FIELD AIRPORT AUTHORITY

Recitals:

Walker Field Airport Authority was created in 1971 under the Public Airport Authority Act of 1965. Walker Field Airport currently consists of approximately 2370 acres, including three types of use areas: 1. Aeronautical, 2. Aeronautical/Commercial, and 3. Non-Aeronautical/Commercial. There are two active runways capable of handling commercial, military, propeller and general aviation traffic into the Grand Junction area.

Over the years a Planned Development zone was established for the airport properties. Various versions of the Zoning and Development Code have included an airport overlay zoning district that included use restrictions in the various airport subdistricts, including Area of Influence, Noise Zone, Critical Zone and Clear Zone. The overlay district applies additional standards and requirements to properties, and includes properties not owned or controlled by Walker Field Public Airport Authority. The overlay district does not include specific standards for development of the Walker Field Airport PD (Planned Development). This PD ordinance will establish the standards and requirements for development on the airport property.

The Planning Commission has recommended approval of the PD ordinance. The City Council finds that the request meets the goals and policies set forth in the Growth Plan and the requirements of the Zoning and Development Code.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

The property owned by Walker Field Airport Authority and zoned PD, as shown on the attached Exhibit A, shall be consistent with the adopted Walker Field Airport Master Plan and shall be subject to the following:

<u>Aeronautical:</u>

Allowed Uses:
This zone is primarily for, but not limited to:

- Aircraft Maintenance, Storage, Tie-Down, and Sales
- Aircraft and Aircraft Parts Manufacturer
- Aircraft Charter and Taxi
- Fixed Base Operator (FBO)
- Commercial Airline Operation

- Federal Aviation Administration (FAA)
- Governmental Aeronautical Activities
- Fire Protection and Medical Operation
- BLM Fire Suppression Center
- Pilot and Emergency Personnel Temporary Quarters While on Duty
- Civil Air Patrol
- Flight Club
- Flight School
- Pilot Supply Shop
- Food Service for Aeronautical Customers
- Fly-in Hotel, Bed and Breakfast, or Inn
- Air Cargo Operation
- Private Hangar
- Taxiway
- Runway
- Run-up area
- Passenger Terminal Building
- Aircraft Safety Areas
- Navigation and Landing Aids
- Aeronautical Related Activities Approved by the FAA

Street Improvements:

- All roads located on AUTHORITY property are owned and maintained by AUTHORITY in fee simple absolute.
- Any additional or existing street improvements will be determined by AUTHORITY and FAA.
- Minimum paved street width will be twenty-four (24) feet with a minimum of five (5) foot gravel shoulder on each side of the paved street. Total right-of-way will be a minimum of sixty (60) feet. Street specifications will be determined by AUTHORITY for each project. On-street parking is allowed subject to AUTHORITY rules and regulations.
- Transportation Capacity Payment (TCP) will be determined by the number of daily trips estimated for the specific proposal.

Drainage/Stormwater Management:

- Review by Grand Junction Community Development relative to the Airport's stormwater drainage system. City of Grand Junction stormwater drainage fees will not apply if all runoff is directed to AUTHORITY detention basins.
- Refer to the AUTHORITY's Colorado Discharge Permit System Stormwater Management Plan, as amended from time to time.

Utilities:

- Additional and existing utilities located on AUTHORITY property determined by AUTHORITY.

- All other utilities located off airport property to be determined by utility provider.
- Fire hydrants and water main extensions to be determined by the Grand Junction Fire Department.

Site Development:

bulk requirements

a. TENANT must establish compatible grading and drainage relationships between building, parking areas, ramps, taxiways, and adjacent properties consistent with the AUTHORITY's master plan for grading and drainage and the City of Grand Junction drainage requirements. Tenant shall be responsible for assuring that any proposed alteration of grading or drainage does not result in damage to any other real or personal property surrounding, or in the vicinity of, the subject property.
b. Building setback from all lease lines is zero (0) feet.
c. Building construction and materials must be non-glare and must not interfere with aircraft operations.
d. Enclosed hangars must have a floor consisting of a minimum of 4 inches of concrete.
e. Exterior building colors will be soft colors similar to those found in nature in soil, rocks, and vegetation within the region. Any structure color existing prior to the adoption of these Covenants shall be exempt from the exterior building color requirements. Upon request, manufacturer's standard color chart will be provided to the AUTHORITY for review and approval of the exterior building trim and wall colors.
f. Aircraft movement areas must consist of a minimum of 4 inches of asphalt or concrete and must meet the design criteria for the aircraft weight contemplated.
g. Compliance with the adopted Fire and Building Codes.
h. Approved FAA FORM 7460-1 for the improvements.

parking and traffic circulation

- TENANT may be subject to adequate parking space regulations as required by the AUTHORITY's Requirements and Minimum Standards for Commercial Aeronautical Services and Activities.
- No review by Grand Junction Community Development.

landscaping (street frontages, parking areas)

- Landscaping not required.
- TENANT must eliminate weeds on a regular basis and must comply with all FAA requirements pursuant to FAR Part 139, as amended from time to time.

screening and buffering

- Additional and existing to be determined by AUTHORITY.

lighting

- Lights must be placed or shielded so they do not cause glare or excessive light spillage onto adjacent properties, runways, taxiways, taxilanes, ramp areas, roadways, and the air traffic control tower.

signage

- TENANT must comply with the City of Grand Junction Zoning and Development Code, as amended from time to time, and Federal Aviation Regulations, as amended from time to time, for signage requirements. All lighted signs must be approved in writing, in advance, by the AUTHORITY. Furthermore, final approval of signage will be at the sole discretion of the AUTHORITY.

pedestrian circulation

- Required pedestrian circulation will be at the sole discretion of the AUTHORITY.

review process

- Minor Site Plan Review by City of Grand Junction
- Grading and Drainage review by City of Grand Junction
- Approved FAA FORM 7460-1 for the improvements provided to City of Grand Junction prior to issuance of a Planning Clearance.
- Sign permits required. Signage must meet standards of the City of Grand Junction and AUTHORITY, whichever is more restrictive.

Aeronautical/Commercial:

Allowed Uses:
This zone is primarily for but not limited to:

- Pilot Supply Shop
- Car Rental
- Restaurant
- Aeronautical Support Manufacturer]
- Courier Service
- Parking Infrastructure
- Gift Shop
- Service Business
- Weather Service

- Transportation Security Administration
- Ground Handling Service
- Aircraft Sales
- Multi-modal Transportation Systems
- Aeronautical Related Activities Approved by the FAA

Requirements:

- Compliance with all requirements of the C-1 (Light Commercial) zone district of the City of Grand Junction.
- Review process in accordance with the Zoning and Development Code—Planned Development. All projects will require review and approval of the Planning Commission.
- All required fees and permits in accordance with the City of Grand Junction.
- An approved FAA FORM 7460-1 for the improvements prior to issuance of a Planning Clearance.
- Compliance with adopted Building and Fire Codes.
- Review by Grand Junction Community Development relative to the Airport's stormwater drainage system. City of Grand Junction stormwater drainage fees will not apply if all runoff is directed to AUTHORITY detention basins.

Non-Aeronautical/Commercial:

Allowed Uses:
This zone is primarily for, but not limited to:

- Motel, Hotel, Bed & Breakfast, Inn, etc.
- Restaurant
- Convenience Store
- Car Wash
- Museum
- Theater
- Office Complex
- Multi-modal Transportation Complex
- AUTHORITY may consider any other uses allowed in the C-1 zone district.

Requirements:

- Compliance with all requirements of the C-1 (Light Commercial) zone district of the City of Grand Junction.
- Review process in accordance with the Zoning and Development Code—Planned Development. All projects will require review and approval of the Planning Commission.

- All required fees and permits in accordance with the City of Grand Junction.
- An approved FAA FORM 7460-1 for the improvements prior to issuance of a Planning Clearance.
- Compliance with adopted Building and Fire Codes.
- Review by Grand Junction Community Development relative to the Airport's stormwater drainage system. City of Grand Junction stormwater drainage fees will not apply if all runoff is directed to AUTHORITY detention basins.

INTRODUCED for FIRST READING and PUBLICATION this 6th day of October, 2004.

PASSED on SECOND READING this 20th day of October, 2004.

CITY OF GRAND JUNCTION, COLORADO

ORDINANCE NO. _____

AN ORDINANCE APPROVING THE GRAND JUNCTION REGIONAL AIRPORT INSTITUTIONAL AND CIVIC MASTER PLAN AND AMENDING ORDINANCE NO. 3679, PLANNED DEVELOPMENT FOR THE AIRPORT PROPERTY

Recitals

The proposed Institutional and Civic Master Plan for the Grand Junction Regional Airport includes two components: the 2009 Airport Master Plan Update and the 2011 Terminal Area Plan and 2017 Amendment. The update addresses forecasting of future aviation activity, which serves as the basis for the facility improvements necessary to meet the needs. The Terminal Plan includes both the long term needs for the replacement of the terminal building, as well as the near-term improvements needed to maintain safe and efficient operation of the existing building until funding is available for its replacement.

Ordinance No. 3679, adopted in 2004, established standards for the Planned Development (PD) zone district for the Airport property based on three zones, 1. Aeronautical, 2. Aeronautical/Commercial and 3. Non-aeronautical. Modifications proposed for the ordinance include placing the partially constructed Administration Building in the Non-aeronautical/Commercial zone and modifying the review process to be consistent with the current Zoning and Development Code which allows for administrative review of future development.

The City Council finds, after a public hearing and review of the proposed that:

1. The requested Institutional and Civic Master Plan meets the requirements of Section 21.02.190 (c) of the Grand Junction Zoning and Development Code.

2. The Outline Development Plan conforms with the requirements of Section 21.02.150 (b) (2) of the Grand Junction Zoning and Development Code and meets more than one of the rezoning criteria provided in Section 21.02.140 of the Grand Junction Zoning and Development Code.

The City Council also finds and determines that the ODP achieves substantial long-term community benefits, as required by the Zoning and Development Code, as follows:

The Airport, along with the aviation-related businesses and facilities, represents a vital and significant regional economic asset by providing commercial passenger service, general aviation facilities, air cargo, and a small amount of military activity. In addition, the Airport also provides benefits to the local businesses and industries, promotes tourism, and encourages additional business development and expansion throughout Grand Junction and the surrounding region. The 2013 Colorado Airports Economic Impact Study quantified the total impact of the Grand Junction Regional Airport at 2,871 jobs, with a total payroll of $130,775,972 and a total economic output of $380,039,796.

The Master Plan accommodates aircraft operations and the traveling public with great reliability and safety and makes the most efficient use of the available land for aviation related activities and supporting uses by defining improvements necessary to meet future needs.

After public notice and public hearing as required by the Grand Junction Zoning & Development Code, the Planning Commission reviewed the request for the proposed Institutional and Civic Master Plan, Planned Development (PD) and Outline Development Plan (ODP) and determined that it satisfies the applicable criteria of the Zoning and Development Code, is consistent with the purposes, intent, goals and policies of the Comprehensive Plan, and is generally compatible with land uses located in the surrounding area, and recommended approval.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT THE INSTITUTIONAL AND CIVIC MASTER PLAN (attachment A) AND OUTLINE DEVELOPMENT PLAN (attachments B and C) AS A PLANNED DEVELOPMENT FOR THE GRAND JUNCTION REGIONAL AIRPORT IS APPROVED WITH THE FOLLOWING STANDARDS:

A. This Ordinance applies to the following described property:

Uses and Standards are as follows:

Aeronautical Zone

Allowed uses to be determined by the GJRAA to include:

- Aircraft Maintenance, Storage, Tie-Down, and Sales
- Aircraft and Aircraft Parts Manufacturer
- Aircraft Charter and Taxi
- Fixed Base Operator (FBO)
- Commercial Airline Operation
- Federal Aviation Administration (FAA)
- Governmental Aeronautical Activities
- Fire Protection and Medical Operation
- BLM Fire Suppression Center
- Pilot and Emergency Personnel Temporary Quarters while on duty
- Civil Air Patrol
- Flight Club and School
- Pilot Supply Shop
- Food Service for Aeronautical Customers
- Fly-in Lodging
- Air Cargo Operation
- Private Hangars
- Taxiway, Runway and Run-up area
- Passenger Terminal Building
- Aircraft Safety areas
- Navigational and Landing Aids
- Aeronautical related activities approved by FAA

Street Improvements:

- All internal streets located on GJRAA property are owned and maintained by the Authority.
- Street improvements to serve the Aeronautical Zone will be determined by the Authority and FAA.
- Minimum paved street width shall be 24 feet with a minimum 5’ gravel shoulder on each side.

- On-street parking is subject to Authority rules and regulations.
- Street specifications will be determined by the Authority.
- All new development is subject to the City's Transportation Capacity Payment.

Drainage/Stormwater Management:

- Final drainage report and stormwater permit through the State of Colorado and 521 Drainage Authority must be obtained in accordance with City standards and in accordance with the Airport Master Drainage Report.

Utilities:

- Utility extensions and upgrades to be determined by the Authority and utility providers.
- Fire hydrants and water main extension requirements to be determined by the Grand Junction Fire Department.

Site Development Bulk Requirements:

- Tenant must establish compatible grading and drainage relationships between building, parking areas, ramps, taxiways, and adjacent properties consistent with the Authority's Master Drainage Report and the City's requirements. Tenant shall be responsible for assuring that any alteration of grading or drainage does not result in damage to any other real or personal property surrounding or in the vicinity of the subject property.
- Building setback from all lease lines shall be zero (0) feet.
- Building construction and materials must be non-glare and must not interfere with aircraft operations.
- Enclosed hangars shall have a minimum of 4 inches of concrete for the floor.
- Exterior building colors shall be soft colors similar to those found in nature in soil, rocks and vegetation of the surrounding area, to be approved by the Authority.
- Aircraft movement areas shall consist of a minimum of 4 inches of asphalt or concrete and meet the design criteria for the aircraft weight contemplated.
- Compliance with adopted Fire and Building Codes.
- Approved FAA FORM 7460-1 for all improvements.

Parking and On-site Circulation:

- Tenant subject to adequate parking as required by Authority's Requirements and Minimum Standards for Commercial Aeronautical Services and Activities.
- Required pedestrian circulation to be determined by Authority.

Landscaping, Screening and Buffering:

- Landscaping not required.
- Screening and buffering to be determined by Authority.
- Tenant shall eliminate weeds on a regular basis and comply with all FAA requirements pursuant to FAR Part 139, as amended from time to time.

Lighting:

- Lighting must be placed or shielded to not cause glare or excessive light spillage onto adjacent properties, runways, taxiways, taxilanes, ramp areas, roadways and the air traffic control tower.

Signage:

- Tenants must comply with the City's sign regulations and Federal Aviation Regulations for all signage.
- All lighted signs must be approved in writing by the Authority.
- Final approval of signage will be at the sole discretion of the Authority.

Review Process:

- City review of projects will be limited to grading and drainage plans, site circulation and parking and adequate fire protection.
- Approved FAA FORM 7460-1 for the improvements shall be provided to the City prior to the issuance of a Planning Clearance.
- Sign permits are required. Signage must meet standards of the City and Authority, whichever is more restrictive.

<u>Aeronautical/Commercial Zone</u>

Allowed uses to be determined by the GJRAA to include:

- Pilot Supply Shop
- Car Rental
- Restaurant
- Aeronautical Support Manufacturer
- Courier Service
- Parking Infrastructure
- Gift Shop
- Service Business
- Weather Service
- Transportation Security Administration
- Ground Handling Service
- Aircraft Sales
- Multi-modal Transportation Systems
- Aeronautical Related Activities Approved by the FAA

Requirements:

- Compliance with all requirements of the C-1 zone district
- Review process in accordance with the City's Zoning and Development Code
- All required fees and permits in accordance with the City
- An approved FAA FORM 7460-1 for the improvements prior to issuance of a Planning Clearance
- Compliance with Building and Fire Codes
- Final drainage report and stormwater permit through the State of Colorado and 521 Drainage Authority must be obtained in accordance with City standards and in accordance with the Airport Master Drainage Report.

<u>Non-Aeronautical/Commercial</u>

Allowed Uses Include:

- Lodging
- Restaurant
- Convenience Store
- Car Wash
- Museum

- Theater
- Office Complex
- Multi-modal Transportation Complex
- Authority may consider any other uses allowed in the C-1 zone district

Requirements:

- Compliance with all requirements of the C-1 zone district
- Review process in accordance with the City's Zoning and Development Code
- All required fees and permits in accordance with the City
- An approved FAA FORM 7460-1 for the improvements prior to issuance of a Planning Clearance
- Compliance with Building and Fire Codes
- Final drainage report and stormwater permit through the State of Colorado and 521 Drainage Authority must be obtained in accordance with City standards and in accordance with the Airport Master Drainage Report.

Introduced for first reading on this 20th day of February, 2019 and ordered published in pamphlet form.

_____
Wanda Winkelmann
City Clerk

CITY OF GRAND JUNCTION, COLORADO

ORDINANCE NO. _____

AN ORDINANCE VACATING A PORTION OF THE 27 ¼ ROAD RIGHT-OF-WAY ADJACENT TO AIRPORT PROPERTY

Recitals:

The Plan also includes the relocation of a section of 27 ¼ Road around the west end of the new runway protection zone for the proposed runway 11/29. Approximately 1 mile of the existing 27 ¼ Road will be realigned to swing to the west around the runway zone. The proposed ordinance to vacate the existing section of 27 ¼ Road that is being realigned is conditioned on the acceptance of the realigned improvements, completion of the land patent transfer of property to the Airport and the dedication of right-of-way for the new alignment.

After public notice and public hearing as required by the Grand Junction Zoning and Development Code, and upon recommendation of approval by the Planning Commission, the Grand Junction City Council finds that the request to vacate a portion of the 27 ¼ Road right-of-way adjacent to Airport property is consistent with the Comprehensive Plan, the Grand Valley Circulation Plan and Section 21.02.100 of the Grand Junction Municipal Code.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT THE FOLLOWING DESCRIBED DEDICATED RIGHT-OF-WAY IS HEREBY VACATED, CONDITIONED ON THE ACCEPTANCE OF THE REALIGNED IMPROVEMENTS, COMPLETION OF THE LAND PATENT TRANSFER OF PROPERTY TO THE AIRPORT AND THE DEDICATION OF RIGHT-OF-WAY FOR THE NEW ALIGNMENT:

A road right of way as described at reception number 1771285 at the Mesa County Clerk and Recorder situated in the southwest quarter of Section 24, and the northwest quarter and the north half of the southwest quarter of Section 25, Township 1 North, Range 1 West of the Ute Meridian, County of Mesa, State of Colorado.

See Exhibit A.

Grand Junction Planning Commission

Regular Session

Item #2.a.vi.

Meeting Date: February 20, 2019

Presented By: Andrew Gingerich, Associate Planner

Department: Community Development

Submitted By: Andrew Gingerich, Associate Planner

Information

SUBJECT:

Introduction of a Proposed Ordinance Rezoning Two Properties from M-U (Mixed Use) to C-2 (General Commercial) Located at 746 23 ½ Road and Set a Public Hearing for March 6, 2019

RECOMMENDATION:

The Planning Commission heard this item at their February 12, 2019 meeting and recommended approval (5-0).

EXECUTIVE SUMMARY:

The Applicant, Western Slope Properties, LLC, is requesting the Rezone of two properties totaling 20.2 acres. The properties include an 18.673-acre property at 746 23 ½ Road and a contiguous unaddressed parcel to the north at 1.533 acres. The Applicant is proposing to Rezone the properties from M-U (Mixed Use) to C-2 (General Commercial) in anticipation of future development of an RV resort. The requested C-2 zone district is consistent with the Comprehensive Plan Future Land Use designation of Commercial/Industrial.

BACKGROUND OR DETAILED INFORMATION:

BACKGROUND
The subject properties are located at 746 23 ½ Rd. The second property, located to the north, does not currently have an address. There is currently one structure onsite; an older stock single-family residence. The Applicant is intending to develop the site for use as an RV resort, provided that the Rezone request is granted.

The site is located directly south of Interstate 70, north of which are properties with heavy commercial uses currently within C-2 and County PUD zone districts. The properties to the west are also currently heavy commercial uses and are located in I-1 zone districts. The properties to the east and south of the site are currently agricultural and single family uses within an M-U zone district.

The site is also located at the northwest corner of the 24 Road Design Overlay. The intent of the overlay is to create a multimodal transportation network, coordinate development around natural open spaces, accommodate a mix of development, provide usable common open space, and establish a pattern and character for the long term development for the region (see ZDC Title 25). The 24 Road Design Overlay standards would apply regardless of zone district designation.

NOTIFICATION REQUIREMENTS

A Neighborhood Meeting was held on Tuesday, November 27, 2018 at 5:30 pm at the Double Tree Inn, located at 743 Horizon Drive, Grand Junction. The Applicant's representative provided an overview of the Rezone request from the M-U (Mixed Use) zone district to the C-2 (General Commercial) zone district. 12 citizens, along with the Applicant's representative and City planning staff were in attendance. Attendees were concerned primarily about drainage, traffic, the difference between the M-U and C-2 zones, and how they could provide public comment for the proposed Rezone.

Public notice for this application was provided in accordance with Sec. 21.02.080(g) of the Code, including posting notification signs on the subject property on all public rights-of-way.

ANALYSIS

Pursuant to Section 21.02.140 of the Grand Junction Zoning and Development Code, the City may Rezone property if the proposed changes are consistent with the vision, goals and policies of the Comprehensive Plan and must meet one or more of the following criteria:

(1) Subsequent events have invalidated the original premise and findings; and/or

Both the proposed C-2 zone and the existing M-U zone district are consistent with the Comprehensive Plan Future Land Use Designation of Commercial/Industrial. Both staff and the Applicant have not identified a subsequent event that would invalidate the existing M-U zoning. Therefore, Staff finds this criterion has not been satisfied by the proposed Rezone.

(2) The character and/or condition of the area has changed such that the amendment is consistent with the Plan; and/or

The area is within the 24 Road Corridor Overlay. The greater area within the overlay, especially east and south of the site, has been transitioning from vacant and agricultural uses to primarily heavy commercial and service-oriented uses. Staff agrees with the Applicant that the proposed Rezone to the C-2 zone district is made in anticipation of future development that is consistent with the trend toward service businesses. The C-2 zone district allows for development that is consistent with the 24 Road Corridor Overlay, as there are many other properties located within the overlay that are zoned C-2.

Properties to the north and east have developed as heavy commercial uses and are allowed to be developed as industrial uses. A C-2 zone district may assist in creating a desirable transition between these areas and the properties to the east located in an M-U zone district, which are intended to develop as a mix of light manufacturing office park employment centers, retail, service, and multifamily residential uses in accordance with the Code. This transition from more intensive industrial type uses to generally less intensive business and service oriented uses is the intention of the Comprehensive plan, which shows the larger area transitioning west to east from Industrial to Commercial/Industrial to Village Center designations. It is staff's finding that creating a C-2 zoning in this area would further the intent of the plan and be consistent with the changing conditions and character of the area. Staff finds this criterion has been met.

(3) Public and community facilities are adequate to serve the type and scope of land use proposed; and/or

The properties can be served by Ute water, City sewer, Xcel Energy electricity and natural gas, and cable network links. The property will also have access to water, sewer and storm drainage infrastructure.

The site is well situated between Community Hospital and Canyon View Park, which both attract visitors of overnight stays. These would be supportive uses should the site develop as a campground/RV park use.

The site is located near the I-70 and 24 Road interchange. Direct access to the site is somewhat limited with 23 ½ Road as the only current access. However, the same limitations would apply to development that is currently allowed in the existing M-U zone district as these two zone districts share similar allowed uses.

The subject properties are within the City of Grand Junction and adequate public and community facilities and services are available and sufficient to serve the anticipated re-development. Therefore, staff finds this criterion has been met.

(4) An inadequate supply of suitably designated land is available in the community, as defined by the presiding body, to accommodate the proposed land use; and/or

An RV park is not an allowable use in an M-U zone district and there are not C-2 zone properties in the immediate vicinity of the site. However, there are several other developable sites in the wider area, that are zoned C-1 or C-2 that would allow for a campground/RV Resort use. These include areas northwest of the I-70 and 24 Road interchange and areas south of 24 ½ Road.

Because there are other properties zoned C-1 and C-2 in the general area, which would currently allow a campground/RV park use, staff finds this criterion has not been met.

(5) The community or area, as defined by the presiding body, will derive benefits from the proposed amendment.

The community will derive benefits from the proposed Rezone by creating an opportunity for the land to be developed in manner that is consistent with recent commercial development in the area. Though uses in the M-U District would allow for similar benefits, the allowable uses in the C-2 zone district will also serve as an appropriate transition from higher intensity uses from the west to the intended village center and mixed-use developments to the east. The Future Land Use designation of Commercial/Industrial contemplates this transition.

Therefore, staff finds that this criterion has been met.

This Rezone request is consistent with the Future Land Use Map designation of Commercial/Industrial as well as the following vision, goals and/or policies of the Comprehensive Plan:

Goal 1 – Policy A:
City and County land use decision will be consistent with the Future Land Use Map.

Goal 3:
The Comprehensive Plan will create ordered and balanced growth and spread future growth throughout the region.

Goal 12 – Policy A:
The City and County will improve as a regional center of commerce, culture and tourism.

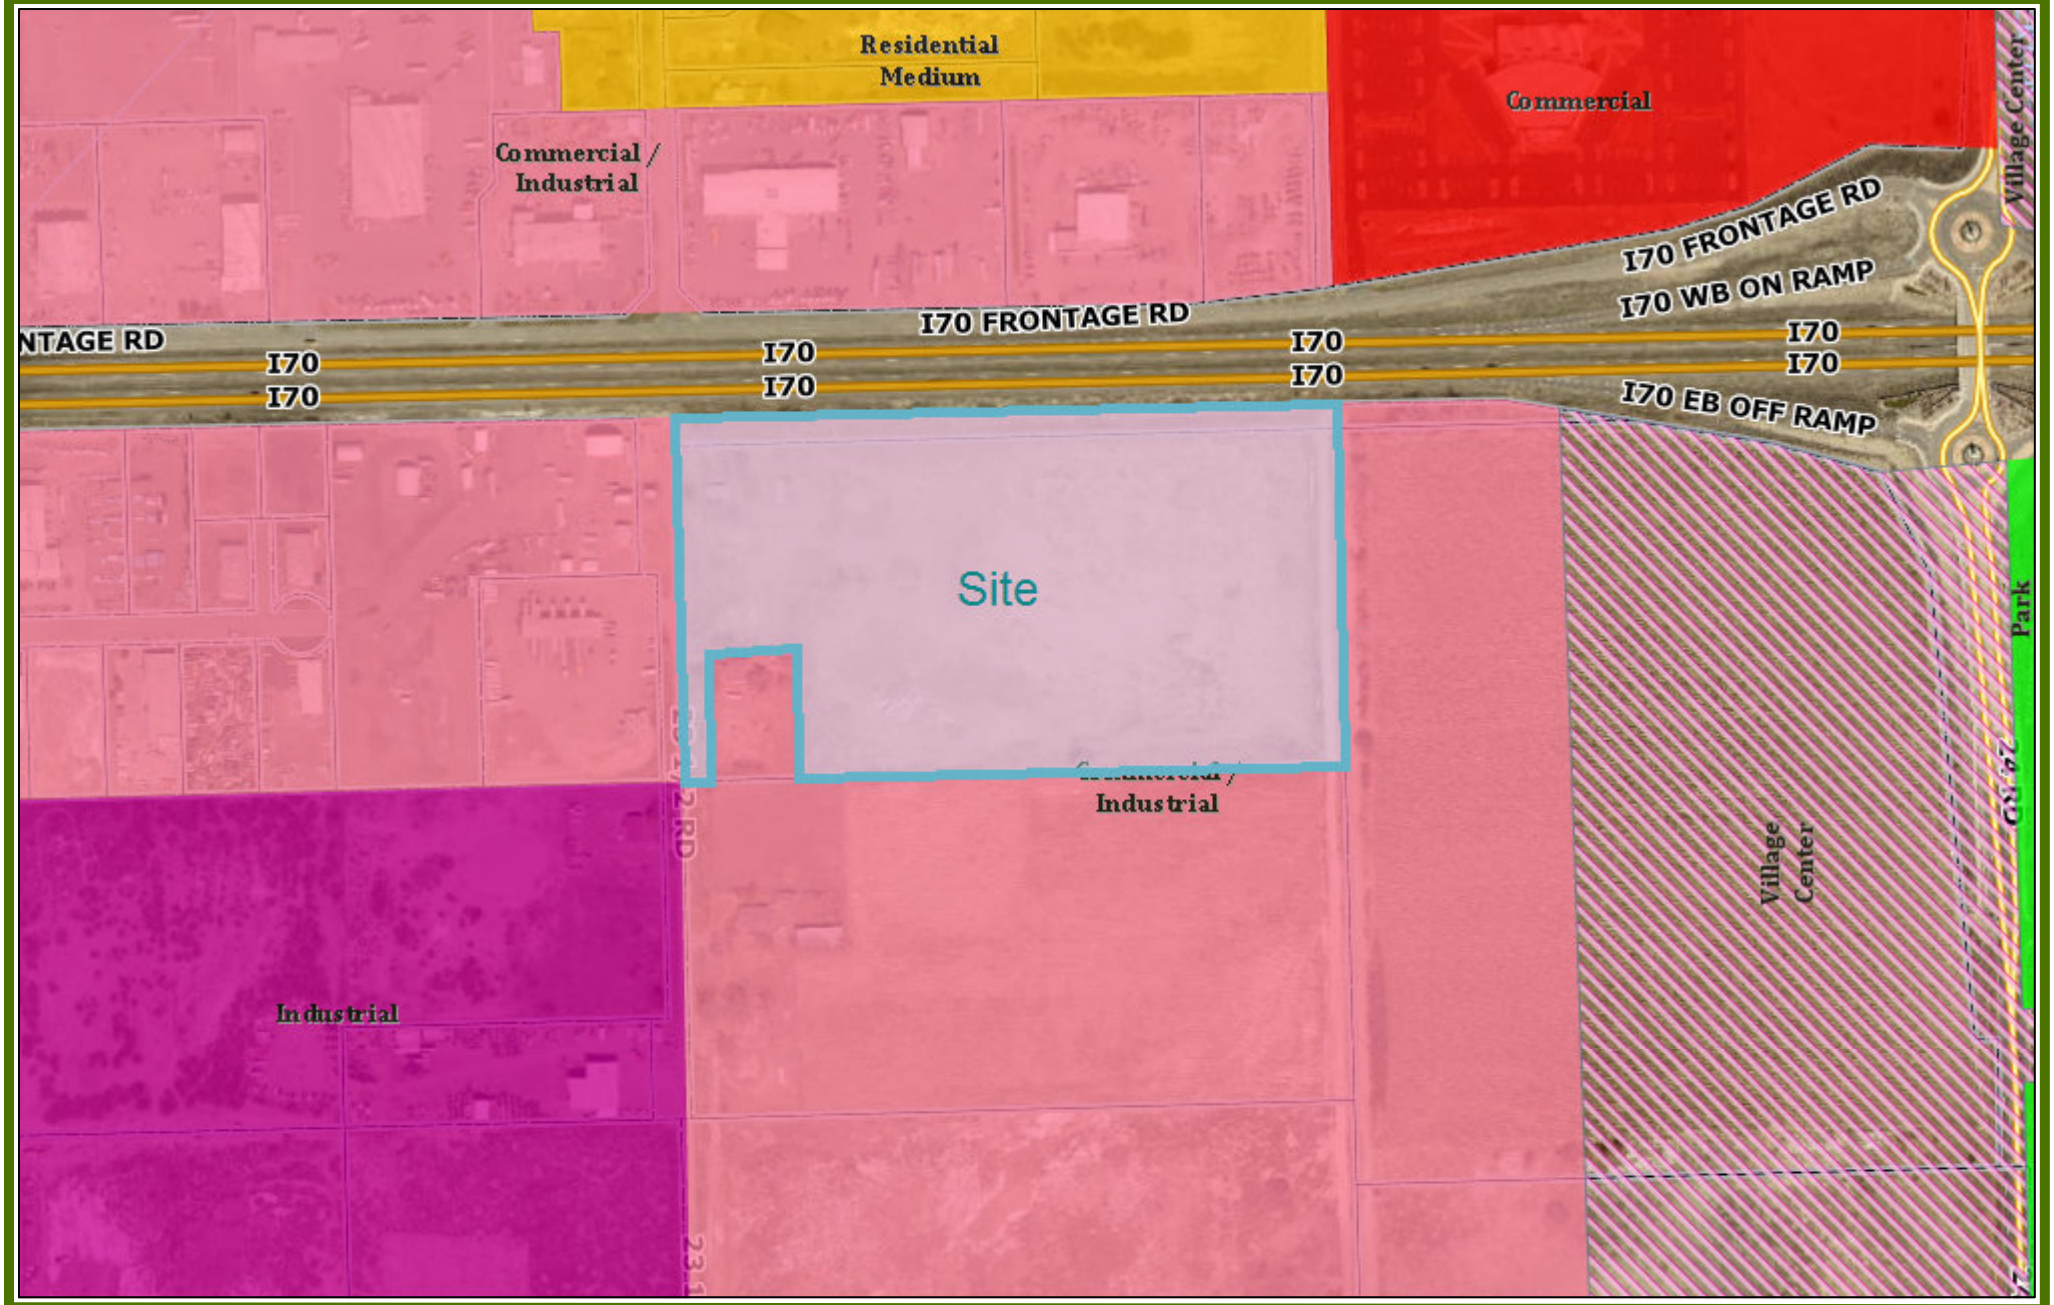
Goal 12 – Policy B:
The City and County will provide appropriate commercial and industrial development opportunities.

STAFF RECOMMENDATION AND FINDINGS OF FACT
After reviewing RZN-2018-785, a request to Rezone properties totaling 20.2 acres from the M-U (Mixed Use) zone district to the C-2 (General Commercial) zone district, the following findings of fact have been made:

1. The requested zone is consistent with the goals and policies of the Comprehensive Plan;

2. In accordance with Section 21.02.140 of the Grand Junction Zoning and Development Code, one or more of the criteria have been met.

Therefore, Staff recommends approval of the request to Rezone the properties located at 746 23 ½ Road and the unaddressed contiguous parcel to the north from the M-U (Mixed Use) zone district to the C-2 (General Commercial) zone district.



SUGGESTED MOTION:

I move to introduce an ordinance rezoning the Western Slope Properties, LLC properties from M-U (Mixed Use) to C-2 (General Commercial), located at 746 23 ½ Road and set a public hearing for March 6, 2019.

CITY OF GRAND JUNCTION, COLORADO

ORDINANCE NO.

AN ORDINANCE REZONING THE WESTERN SLOPE PROPERTIES LLC PROPERTIES FROM M-U (MIXED USE) TO C-2 (GENERAL COMMERCIAL)

LOCATED AT 746 23 1/2 ROAD

Recitals:

After public notice and public hearing as required by the Grand Junction Zoning and Development Code, the Grand Junction Planning Commission recommended approval of rezoning the proposed Western Slope Properties LLC properties to the C-2 (General Commercial) zone district, finding that it conforms to and is consistent with the Future Land Use Map designation of Commercial/Industrial of the Comprehensive Plan and the Comprehensive Plan's goals and policies and is generally compatible with land uses located in the surrounding area.

After public notice and public hearing, the Grand Junction City Council finds that the C-2 (General Commercial) zone district is in conformance with at least one of the stated criteria of Section 21.02.140 of the Grand Junction Zoning and Development Code.

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

The following properties shall be zoned C-2 (General Commercial):

PARCEL NO. 1
The NI/2 NW1/4 SEI/4 of Section 32,
Township 1 North, Range 1 West of the Ute Meridian;
EXCEPT the following parcel to wit:

Beginning at a point which is 2, 574.82 feet West and I, 980 feet North of the SE corner of said Section 32;
thence East 174.24 feet;
thence North 250 feet;
thence West 174.24 feet;
thence South 250 feet to the Point of Beginning.

PARCEL NO. 2
All that part of the Sl/2 SWI/4 NEI/4 of Section 32,
Township 1 North, Range 1 West of the Ute Meridian lying South of the Right of Way of Interstate 70,

All in County of Mesa, State of Colorado

also known by street and number as: 746 23 1/2 Road, Grand Junction, CO 81505

as identified in Reception # 2819186 in the Office of the Mesa County Clerk and Recorder.

Introduced on first reading this _____day of _____, 2019 and ordered published in pamphlet form.

Adopted on second reading this _____ day of _____, 2019 and ordered published in pamphlet form.

1. Project Intent

This request is made to rezone two parcels with approximately 20.2 acres from the MU (Mixed Use) zone district to the C2 (General Commercial) zone district in anticipation of future development.

2. Project Background and Description

The site is located at 746 23 ½ Road and contains two parcels that are currently zoned MU (Mixed Use). The subject property is also subject to the 24 Road Design Standards. The applicant would like to rezone the two parcels to the C2 (General Commercial) zone district in anticipation of future development with uses that are permitted in the C2 zone district.

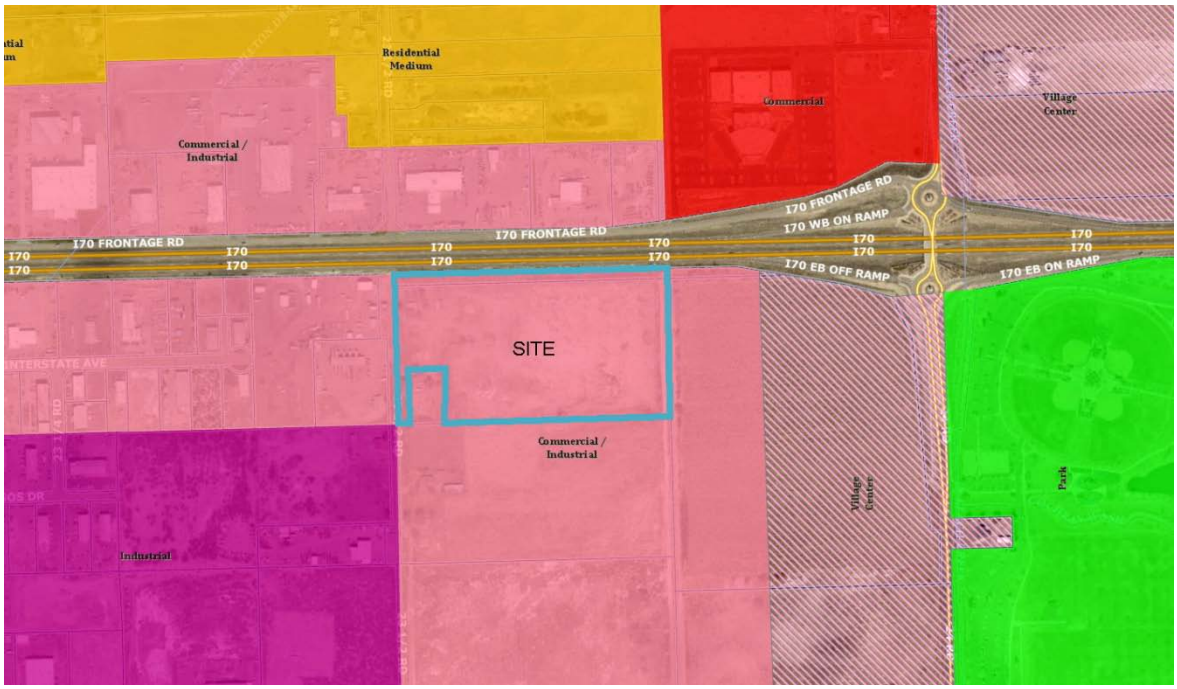
3. Neighborhood Meeting



A Neighborhood Meeting was held on Tuesday, November 27, 2018 at 5:30 pm at the DoubleTree Inn, located at 743 Horizon Drive, Grand Junction. The owner's representative provided an overview of the rezone request from the MU (Mixed Use) zone district to the C2 (General Commercial) zone district. Mr. Andrew Gingrich, Associate Planner with the City of Grand Junction, also attended the meeting to answer questions about the rezone review and approval process. A list of all those attending the meeting has been provided with this report, as well as the primary issues of concern that were discussed during the meeting.

Public notice for this application will be provided in accordance with Sec. 21.02.080(g) of the Grand Junction Municipal Code, including posting the subject property on all public rights-of-way.

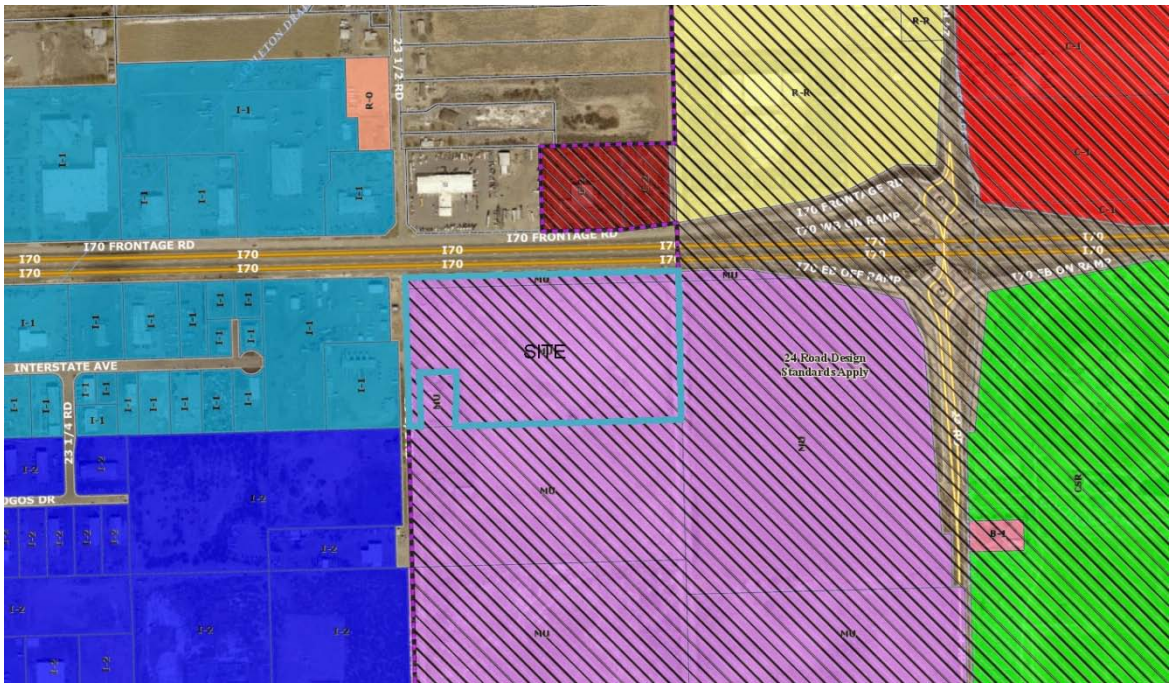
4. Comprehensive Plan and Zoning

Future Land Use Map

The Comprehensive Plan's Future Land Use Map shows the property as Commercial/Industrial land use classification. The C2 zone district implements the Commercial/Industrial land use classification and is consistent with the Comprehensive Plan.

The proposed rezone meets a number of the goals and policies of the Comprehensive Plan:

Goal 1, Policy D: For development that requires municipal services, those services shall be provided by a municipality or district capable of providing municipal services.



Goal 3: The Comprehensive Plan will create ordered and balanced growth and spread future growth throughout the community.

Zoning and Surrounding Land Use

The applicant is requesting a rezone from the current from MU (Mixed Use) to C2 (General Commercial) zone district. This request is consistent with, and supports, the Comprehensive Plan's Future Land Use Map classification of Commercial/Industrial for the subject property. When development occurs, the property is subject to the 24 Road Corridor Design Standards, irrespective of the zone district assigned to the property. A separate development application will be submitted for the use specific land use.

Surrounding area zoning and land uses include:

North – City C2 and Mesa County PUD with commercial land uses
South – MU (Mixed Use) with two single family residential and agricultural uses
West – I1 (Light Industrial) with commercial and industrial land uses
East – MU (Mixed Use) with agricultural land uses

5. Utility Providers

All required and necessary utilities shall be provided concurrent with development of the subject property. Utility providers for the proposed development have the capacity and willingness to serve the development. Public facilities such as medical, parks and public safety are available to serve development on this site within 2 miles of the site.

Utility providers for the site are as follows:

Sewer: City of Grand Junction/Persigo
Water: Ute Water Conservation District
Drainage: Grand Valley Drainage District
Irrigation water: Grand Valley Irrigation Company
Electric: Grand Valley Power

All utilities shall be constructed to current standards and specifications of the utility and service provider at the time of development.

6. Approval Criteria

Section 21.02.080(d), **General Approval Criteria.** No permit may be approved unless all of the following criteria are satisfied:

(1) Compliance with the Comprehensive Plan and any applicable adopted plan.

Response: The subject property is shown as Commercial/Industrial on the Comprehensive Plan's Future Land Use Map. The property is surrounded by the Commercial/Industrial land use classification which indicates that the Comprehensive Plan anticipates similar type uses of a commercial and industrial nature for this area of the community. Furthermore, the requested rezone to the C2 zone district will implement the Commercial/Industrial land use classification. Allowed uses in the C2 zone district are compatible with surrounding zoning and existing land uses.

The proposed development meets the following goal and policy of the Comprehensive Plan:

Goal 1, Policy D: For development that requires municipal services, those services shall be provided by a municipality or district capable of providing municipal services.
Goal 3: The Comprehensive Plan will create ordered and balanced growth and spread future growth throughout the community.

This criterion has been MET.

(2) Compliance with this zoning and development code.

Response: The requested rezone to C2 zone districts supports the Comprehensive Plan's Future Land Use classification of Commercial/Industrial. Future development will comply with the provisions of Sec. 21.03, Zoning Districts; Sec. 21.04, Uses and Sec. 21.06, Development Standards of the Zoning and Development Code. The approval criteria of Section 21.02.140(a) have been addressed and met.

This criterion has been MET.

(3) Conditions of any prior approvals.

Response: There are no conditions of a prior approval that pertain to the subject property.

This criterion is not applicable.

(4) Public facilities and utilities shall be available concurrent with the development.

Response: All required and necessary utilities shall be provided concurrent with development of the subject property. Utility providers for the subject property have the capacity and willingness to serve future development. Public facilities such as medical, schools, parks and public safety are available to serve development on this site.

This criterion has been MET.

(5) Received all applicable local, State and federal permits.

Response: All applicable local, state and federal permits shall be obtained.

This criterion has been MET.

Section 21.02.140(a), **Code amendment and rezoning**. Approval Criteria. In order to maintain internal consistency between this code and the zoning maps, map amendments must only occur if:

(1) Subsequent events have invalidated the original premises and findings; and/or

Response: Subsequent events have not invalidated the original premises and findings for the land use classification of Commercial/Industrial for the subject property. The Comprehensive Plan anticipates a variety of commercial and industrial land uses that are implemented through various zoning districts. The applicant wishes to rezone the property to a zone district that will continue to support the Comprehensive Plan in anticipation of

future development, but that also supports land uses that are more commercial in nature than what the MU zone district allows.

This criterion is not applicable.

(2) The character and/or condition of the area has changed such that the amendment is consistent with the Plan; and/or

Response: The character and/or condition of the area is evolving with a range of new developments that tend to be more service in nature such as new hotels, a convenience and gas station and a proposed new bank and office building. The proposed rezone to the C2 zone district is made in anticipation of future development that is consistent with the trend toward service businesses. The current zone district does not support the variety of land uses that the applicant would like to develop, while still maintaining the intent of the Comprehensive Plan.

The requested rezone to C2 will further the goals and policies of the Comprehensive Plan by providing for development that is consistent with the type of anticipated growth and development in this area of the community.

This criterion has been MET.

(3) Public and community facilities are adequate to serve the type and scope of land use proposed; and/or

Response: All required and necessary utilities shall be provided concurrent with development of the subject property. Utility providers for the subject property have the capacity and willingness to serve future development. Public facilities such as medical facilities, schools, library and parks are adequate to serve the scope of anticipated residential development.

This criterion has been MET.

(4) An inadequate supply of suitably designated land is available in the community, as defined by the presiding body, to accommodate the proposed land use; and/or

Response: The current and nearby zoning does not support the type of service related business that the applicant would like to develop on the subject property. While there may be other areas in the community that have the C2 zoning, they are not located in the vicinity of the subject property.

This criterion is not applicable.

(5) The community or area, as defined by the presiding body, will derive benefits from the proposed amendment.

Response: The requested rezone seeks to develop the subject property through the C2 zone district, which supports and implements the Comprehensive Plan, to establish a service related business that is also consistent with existing land uses and businesses.

The community will derive benefit from the rezone by supporting a change in zone districts to the C2 which encourages development of businesses that are compatible with and supports existing land uses and businesses.

This criterion has been MET.

7. Conclusion

The request to rezone from the MU (Mixed Use) zone district to the C2 (General Commercial) zone district supports the Comprehensive Plan's Future Land Use Map classification of Commercial/Industrial. After demonstrating how the requested rezone meets the approval criteria of the Zoning and Development Code and the goals and policies of the Comprehensive Plan, we respectfully request approval of the rezone from the MU (Mixed Use) zone district to the C2 (General Commercial) zone district.

8. Limitations/Restrictions

This report is a site-specific report and is applicable only for the client for whom our work was performed. The review and use of this report by City of Grand Junction, affiliates, and review agencies is fully permitted and requires no other form of authorization. Use of this report under other circumstances is not an appropriate application of this document. This report is a product of Vortex Engineering, Inc. and is to be taken in its entirety. Excerpts from this report when taken out of context may not convey the true intent of the report. It is the owner's and owner's agent's responsibility to read this report and become familiar with recommendations and findings contained herein. Should any discrepancies be found, they must be reported to the preparing engineer within 5 days.

The recommendations and findings outlined in this report are based on: 1) The site visit and discussion with the owner, 2) the site conditions disclosed at the specific time of the site investigation of reference, 3) various conversations with planners and utility companies, and 4) a general review of the zoning and transportation manuals. Vortex Engineering, Inc. assumes no liability for the accuracy or completeness of information furnished by the client or municipality/agency personnel. Site conditions are subject to external environmental effects and may change over time. Use of this report under different site conditions is inappropriate. If it becomes apparent that current site conditions vary from those reported, the design

engineering should be contacted to develop any required report modifications. Vortex Engineering, Inc. is not responsible and accepts no liability for any variation of assumed information.

Vortex Engineering, Inc. represents this report has been prepared within the limits prescribed by the owner and in accordance with the current accepted practice of the civil engineering profession in the area. No warranty or representation either expressed or implied is included or intended in this report or in any of our contracts.

Neighborhood Meeting - Rezone
RE: RV Resort at 746 23 ½ Rd
Date: Tuesday, November 27, 2018
Time: 5:30 – 6:30 pm
Location: Doubletree Hotel

Dear Mr. Gingrich:

A Neighborhood Meeting was held on November 27, 2018 in accordance with Section 21.02.080(e), Neighborhood Meeting of the Grand Junction Municipal Code, for the above referenced project. The meeting was called to order at 5:30 pm with Ms. Lisa Cox of Vortex Engineering, Inc., presenting an overview of the rezone request.

Ms. Cox explained that the applicant would like to rezone the subject property from the current MU (Mixed Used) zone district to the C2 (General Commercial) zone district in anticipation of future development. She noted that the 24 Road Corridor Design Standards would also apply to the property. Ms. Cox noted that the Comprehensive Plan showed the property as Commercial-Industrial on the Future Land Use map and that the C2 zone district implemented the Comprehensive Plan.

During the meeting, Ms. Cox explained that there were several opportunities for citizen input and comments on the proposed development application, including the following:

1. Written comments could be submitted during the Neighborhood Meeting
2. After the application was submitted, comments could be sent to the City
3. Planning Commission public hearing
4. City Council public hearing

The meeting was attended by twelve citizens with several questions and comments made. Information about the City's review process was addressed by Mr. Andrew Gingrich. The following is a synopsis of the primary issues and questions posed by the meeting attendees.

1. Drainage issues needed to be addressed with development of the site on 23 ½ Road and 24 ¾ Road.
2. Heavy truck traffic on 23 ½ Road by existing businesses.
3. The MU is a terrible zone and never should have been started.
4. Did not want property taxes to go up on adjacent properties after the rezone.
5. Concern that notice for the Neighborhood Meeting said there would be an RV park on the property and that's not what was being discussed. Only the rezone was being discussed at the Neighborhood Meeting.
6. Notice to property owners in the 500' area not very effective because of large lots.

7. Where could you find the City's zoning code?
8. What were examples of allowed uses in the MU and C2 zone districts?
9. Would there be access to the Interstate?
10. More development in this area was good energy.
11. Concerns with drivers hauling large campers/RVs on the 23 ½ Road.
12. Were residents voting on the rezone at the meeting tonight?

Ms. Cox addressed the questions with additional information and explained that a separate application would be submitted to the City at the time of development of the site. Property owners located within 500' of the site would be notified when the application was received by the City. With no further questions, Ms. Cox thanked those who attended and called the meeting to a close at 6:15 pm.

Upon your review of the meeting notes, should you have any questions or amendments, please do not hesitate to contact me at 970-245-9051.

Sincerely,

Robert W. Jones II, P.E.

INDUSTRIAL PRETREATMENT SURVEY

FOR ALL INDUSTRIAL and COMMERCIAL (Non-Residential) BUSINESSES

The United States Environmental Protection Agency (USEPA) requires the City of Grand Junction (City) Industrial Pretreatment Program to regulate industrial and commercial facilities in our service area that generate wastewater that may be significant to the Persigo Wastewater Treatment Facility. To support this requirement, the City performs business and facility surveys and inspections to obtain information regarding facility operations and chemical usage, and to evaluate the significance of a facility's wastewater discharge to the publicly owned sewer system. This survey is a screening tool to determine if additional City requirements are required and to add local commercial and industrial businesses to the City's Industrial Pretreatment database.

Facility Name: RV Park - 746 23 1/2 Road

Facility Location: 746 23 1/2 Road

Mailing Address: 2700 Gilstrap Court, Glenwood Springs, CO 81601

Facility Owner: EN-SIM Partnership, LLP (Name) | Owner (Title) | (Phone #)

Neighborhood Meeting - Rezone
RE: RV Resort at 746 23 ½ Rd
Date: Tuesday, November 27, 2018
Time: 5:30 – 6:30 pm
Location: Doubletree Hotel

Dear Mr. Gingrich:

A Neighborhood Meeting was held on November 27, 2018 in accordance with Section 21.02.080(e), Neighborhood Meeting of the Grand Junction Municipal Code, for the above referenced project. The meeting was called to order at 5:30 pm with Ms. Lisa Cox of Vortex Engineering, Inc., presenting an overview of the rezone request.

Ms. Cox explained that the applicant would like to rezone the subject property from the current MU (Mixed Used) zone district to the C2 (General Commercial) zone district in anticipation of future development. She noted that the 24 Road Corridor Design Standards would also apply to the property. Ms. Cox noted that the Comprehensive Plan showed the property as Commercial-Industrial on the Future Land Use map and that the C2 zone district implemented the Comprehensive Plan.

During the meeting, Ms. Cox explained that there were several opportunities for citizen input and comments on the proposed development application, including the following:

1. Written comments could be submitted during the Neighborhood Meeting
2. After the application was submitted, comments could be sent to the City
3. Planning Commission public hearing
4. City Council public hearing

The meeting was attended by twelve citizens with several questions and comments made. Information about the City's review process was addressed by Mr. Andrew Gingrich. The following is a synopsis of the primary issues and questions posed by the meeting attendees.

1. Drainage issues needed to be addressed with development of the site on 23 ½ Road and 24 ¾ Road.
2. Heavy truck traffic on 23 ½ Road by existing businesses.
3. The MU is a terrible zone and never should have been started.
4. Did not want property taxes to go up on adjacent properties after the rezone.
5. Concern that notice for the Neighborhood Meeting said there would be an RV park on the property and that's not what was being discussed. Only the rezone was being discussed at the Neighborhood Meeting.
6. Notice to property owners in the 500' area not very effective because of large lots.

7. Where could you find the City's zoning code?
8. What were examples of allowed uses in the MU and C2 zone districts?
9. Would there be access to the Interstate?
10. More development in this area was good energy.
11. Concerns with drivers hauling large campers/RVs on the 23 ½ Road.
12. Were residents voting on the rezone at the meeting tonight?

Ms. Cox addressed the questions with additional information and explained that a separate application would be submitted to the City at the time of development of the site. Property owners located within 500' of the site would be notified when the application was received by the City. With no further questions, Ms. Cox thanked those who attended and called the meeting to a close at 6:15 pm.

ALTA COMMITMENT

Old Republic National Title Insurance Company

Schedule B, Part I

(Requirements)

Order Number: GJC65037300-2

All of the following Requirements must be met:

This proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

Pay the agreed amount for the estate or interest to be insured.

Pay the premiums, fees, and charges for the Policy to the Company.

Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

1. (THIS ITEM WAS INTENTIONALLY DELETED)
2. AN IMPROVEMENT LOCATION CERTIFICATE/SURVEY FOR THE SUBJECT PROPERTY WAS PREPARED BY D H SURVEYS INC., JOB NO. 639-02-02, DATED SEPTEMBER 23, 2003, THAT IS ACCEPTABLE TO THE COMPANY.

   A SURVEY AFFIDAVIT, EXECUTED BY EN-SIM PARTNERSHIP, L.L.P., A COLORADO LIMITED LIABILITY PARTNERSHIP, IS NECESSARY INDICATING THAT THERE HAVE BEEN NO NEW IMPROVEMENTS, EASEMENTS OR BOUNDARY CHANGES SINCE THE DATE OF SAID IMPROVEMENT LOCATION CERTIFICATE/SURVEY AND THAT THE IMPROVEMENTS SHOWN ON SAID IMPROVEMENT LOCATION CERTIFICATE/SURVEY HAVE NOT BEEN ALTERED SINCE THE DATE OF SAID IMPROVEMENT LOCATION CERTIFICATE/SURVEY.
3. RELEASE OF DEED OF TRUST DATED OCTOBER 27, 2017 FROM EN-SIM PARTNERSHIP, L.L.P., A COLORADO LIMITED LIABILITY PARTNERSHIP, AND DOUGLAS S. SIMONS AND JAMEE E. SIMONS, INDIVIDUALLY, TO THE PUBLIC TRUSTEE OF MESA COUNTY FOR THE USE OF ELIZABETH WOOLARD TO SECURE THE SUM OF $800,000.00 RECORDED OCTOBER 27, 2017 UNDER RECEPTION NO. **2819188**. ASSIGNMENT TO HOME LOAN STATE BANK WAS RECORDED OCTOBER 27, 2017 UNDER RECEPTION NO. **2819217**.
4. WRITTEN CONFIRMATION THAT THE INFORMATION CONTAINED IN STATEMENT OF AUTHORITY FOR EN-SIM PARTNERSHIP, L.L.P. RECORDED APRIL 08, 2002 AT RECEPTION NO. **2049690** IN BOOK 3055 AT PAGE **258** IS CURRENT.

   NOTE: SAID INSTRUMENT DISCLOSES DOUGLAS S. SIMONS AND JAMEE E. SIMONS AS THE PARTNERS AUTHORIZED TO EXECUTE INSTRUMENTS CONVEYING, ENCUMBERING OR OTHERWISE AFFECTING TITLE TO REAL PROPERTY ON BEHALF OF SAID ENTITY. IF THIS INFORMATION IS NOT ACCURATE, A CURRENT STATEMENT OF AUTHORITY MUST BE RECORDED.
5. A FULL COPY OF THE FULLY EXECUTED OPERATING AGREEMENT AND ANY AND ALL AMENDMENTS THERETO FOR WESTERN SLOPE PROPERTIES, LLC MUST BE FURNISHED TO LAND TITLE GUARANTEE COMPANY. SAID AGREEMENT MUST DISCLOSE WHO MAY CONVEY, ACQUIRE, ENCUMBER, LEASE OR OTHERWISE DEAL WITH INTERESTS IN REAL PROPERTY FOR SAID ENTITY.

   NOTE: ADDITIONAL REQUIREMENTS MAY BE NECESSARY UPON REVIEW OF THIS DOCUMENTATION.

ALTA COMMITMENT

Old Republic National Title Insurance Company

Schedule B, Part I

(Requirements)

Order Number: GJC65037300-2

All of the following Requirements must be met:

6. DULY EXECUTED AND ACKNOWLEDGED STATEMENT OF AUTHORITY SETTING FORTH THE NAME OF WESTERN SLOPE PROPERTIES, LLC AS A LLV. THE STATEMENT OF AUTHORITY MUST STATE UNDER WHICH LAWS THE ENTITY WAS CREATED, THE MAILING ADDRESS OF THE ENTITY, AND THE NAME AND POSITION OF THE PERSON(S) AUTHORIZED TO EXECUTE INSTRUMENTS CONVEYING, ENCUMBERING, OR OTHERWISE AFFECTING TITLE TO REAL PROPERTY ON BEHALF OF THE ENTITY AND OTHERWISE COMPLYING WITH THE PROVISIONS OF SECTION 38-30-172, CRS.

   NOTE: THE STATEMENT OF AUTHORITY MUST BE RECORDED WITH THE CLERK AND RECORDER.

7. WARRANTY DEED FROM EN-SIM PARTNERSHIP, L.L.P., A COLORADO LIMITED LIABILITY PARTNERSHIP, TO WESTERN SLOPE PROPERTIES, LLC, A COLORADO LIMITED LIABILITY COMPANY, CONVEYING SUBJECT PROPERTY.

   REQUIREMENTS TO DELETE THE PRE-PRINTED EXCEPTIONS IN THE OWNER'S POLICY TO BE ISSUED

   A. UPON RECEIPT BY THE COMPANY OF A SURVEY AFFIDAVIT, EXECUTED BY EN-SIM PARTNERSHIP, L.L.P., A COLORADO LIMITED LIABILITY PARTNERSHIP; AND A SATISFACTORY FINAL AFFIDAVIT AND AGREEMENT FROM THE SELLER AND PROPOSED INSURED, ITEMS 1-4 OF THE PRE-PRINTED EXCEPTIONS WILL BE DELETED. ANY ADVERSE MATTERS DISCLOSED BY THE FINAL AFFIDAVIT AND AGREEMENT WILL BE ADDED AS EXCEPTIONS.

   B. IF LAND TITLE GUARANTEE CONDUCTS THE CLOSING OF THE CONTEMPLATED TRANSACTIONS AND RECORDS THE DOCUMENTS IN CONNECTION THEREWITH, ITEM NO. 5 OF THE PRE-PRINTED EXCEPTIONS WILL BE DELETED.

   C. UPON RECEIPT OF PROOF OF PAYMENT OF ALL PRIOR YEARS' TAXES AND ASSESSMENTS, ITEM NO. 6 OF THE PRE-PRINTED EXCEPTIONS WILL BE AMENDED TO READ:

   TAXES AND ASSESSMENTS FOR THE YEAR 2019 AND SUBSEQUENT YEARS.

16. ANY AND ALL UNRECORDED LEASES AND/OR TENANCIES IN EXISTENCE.

LAND TITLE GUARANTEE COMPANY
DISCLOSURE STATEMENTS

Note: Pursuant to CRS 10-11-122, notice is hereby given that:

(A) The Subject real property may be located in a special taxing district.

(B) A certificate of taxes due listing each taxing jurisdiction will be obtained from the county treasurer of the county in which the real property is located or that county treasurer's authorized agent unless the proposed insured provides written instructions to the contrary. (for an Owner's Policy of Title Insurance pertaining to a sale of residential real property).

(C) The information regarding special districts and the boundaries of such districts may be obtained from the Board of County Commissioners, the County Clerk and Recorder, or the County Assessor.

Note: Effective September 1, 1997, CRS 30-10-406 requires that all documents received for recording or filing in the clerk and recorder's office shall contain a top margin of at least one inch and a left, right and bottom margin of at least one half of an inch. The clerk and recorder may refuse to record or file any document that does not conform, except that, the requirement for the top margin shall not apply to documents using forms on which space is provided for recording or filing information at the top margin of the document.

Note: Colorado Division of Insurance Regulations 8-1-2 requires that "Every title entity shall be responsible for all matters which appear of record prior to the time of recording whenever the title entity conducts the closing and is responsible for recording or filing of legal documents resulting from the transaction which was closed". Provided that Land Title Guarantee Company conducts the closing of the insured transaction and is responsible for recording the legal documents from the transaction, exception number 5 will not appear on the Owner's Title Policy and the Lenders Policy when issued.

Note: Affirmative mechanic's lien protection for the Owner may be available (typically by deletion of Exception no. 4 of Schedule B, Section 2 of the Commitment from the Owner's Policy to be issued) upon compliance with the following conditions:

(A) The land described in Schedule A of this commitment must be a single family residence which includes a condominium or townhouse unit.

(B) No labor or materials have been furnished by mechanics or material-men for purposes of construction on the land described in Schedule A of this Commitment within the past 6 months.

(C) The Company must receive an appropriate affidavit indemnifying the Company against un-filed mechanic's and material-men's liens.

(D) The Company must receive payment of the appropriate premium.

(E) If there has been construction, improvements or major repairs undertaken on the property to be purchased within six months prior to the Date of Commitment, the requirements to obtain coverage for unrecorded liens will include: disclosure of certain construction information; financial information as to the seller, the builder and or the contractor; payment of the appropriate premium fully executed Indemnity Agreements satisfactory to the company, and, any additional requirements as may be necessary after an examination of the aforesaid information by the Company.

No coverage will be given under any circumstances for labor or material for which the insured has contracted for or agreed to pay.

Note: Pursuant to CRS 10-11-123, notice is hereby given:

This notice applies to owner's policy commitments disclosing that a mineral estate has been severed from the surface estate, in Schedule B-2.

(A) That there is recorded evidence that a mineral estate has been severed, leased, or otherwise conveyed from the surface estate and that there is substantial likelihood that a third party holds some or all interest in oil, gas, other minerals, or geothermal energy in the property; and

(B) That such mineral estate may include the right to enter and use the property without the surface owner's permission.

Note: Pursuant to CRS 10-1-128(6)(a), It is unlawful to knowingly provide false, incomplete, or misleading facts or information to an insurance company for the purpose of defrauding or attempting to defraud the company. Penalties may include imprisonment, fines, denial of insurance, and civil damages. Any insurance company or agent of an insurance company who knowingly provides false, incomplete, or misleading facts or information to a policyholder or claimant for the purpose of defrauding or attempting to defraud the policyholder or claimant with regard to a settlement or award payable from insurance proceeds shall be reported to the Colorado Division of Insurance within the Department of Regulatory Agencies.

Note: Pursuant to Colorado Division of Insurance Regulations 8-1-3, notice is hereby given of the availability of a closing protection letter for the lender, purchaser, lessee or seller in connection with this transaction.

JOINT NOTICE OF PRIVACY POLICY OF LAND TITLE GUARANTEE COMPANY, LAND TITLE GUARANTEE COMPANY OF SUMMIT COUNTY LAND TITLE INSURANCE CORPORATION AND OLD REPUBLIC NATIONAL TITLE INSURANCE COMPANY

This Statement is provided to you as a customer of Land Title Guarantee Company as agent for Land Title Insurance Corporation and Old Republic National Title Insurance Company.

We want you to know that we recognize and respect your privacy expectations and the requirements of federal and state privacy laws. Information security is one of our highest priorities. We recognize that maintaining your trust and confidence is the bedrock of our business. We maintain and regularly review internal and external safeguards against unauthorized access to non-public personal information ("Personal Information").

In the course of our business, we may collect Personal Information about you from:

- applications or other forms we receive from you, including communications sent through TMX, our web-based transaction management system;
- your transactions with, or from the services being performed by us, our affiliates, or others;
- a consumer reporting agency, if such information is provided to us in connection with your transaction;

  and
- The public records maintained by governmental entities that we either obtain directly from those entities, or from our affiliates and non-affiliates.

Our policies regarding the protection of the confidentiality and security of your Personal Information are as follows:

- We restrict access to all Personal Information about you to those employees who need to know that information in order to provide products and services to you.
- We maintain physical, electronic and procedural safeguards that comply with federal standards to protect your Personal Information from unauthorized access or intrusion.
- Employees who violate our strict policies and procedures regarding privacy are subject to disciplinary action.
- We regularly assess security standards and procedures to protect against unauthorized access to Personal Information.

WE DO NOT DISCLOSE ANY PERSONAL INFORMATION ABOUT YOU WITH ANYONE FOR ANY PURPOSE THAT IS NOT PERMITTED BY LAW.

Consistent with applicable privacy laws, there are some situations in which Personal Information may be disclosed. We may disclose your Personal Information when you direct or give us permission; when we are required by law to do so, for example, if we are served a subpoena; or when we suspect fraudulent or criminal activities. We also may disclose your Personal Information when otherwise permitted by applicable privacy laws such as, for example, when disclosure is needed to enforce our rights arising out of any agreement, transaction or relationship with you.

Our policy regarding dispute resolution is as follows: Any controversy or claim arising out of or relating to our privacy policy, or the breach thereof, shall be settled by arbitration in accordance with the rules of the American Arbitration Association, and judgment upon the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof.

Commitment For Title Insurance
Issued by Old Republic National Title Insurance Corporation

NOTICE

IMPORTANT—READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON. .

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I—Requirements; Schedule B, Part II—Exceptions; and the Commitment Conditions, Old Republic National Title Insurance Company, a Minnesota corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured. If all of the Schedule B, Part I—Requirements have not been met within 6 months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

COMMITMENT CONDITIONS

1. DEFINITIONS
   (a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
   (b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
   (c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
   (d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
   (e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
   (f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
   (g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
   (h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, Comitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:
   (a) the Notice;
   (b) the Commitment to Issue Policy;
   (c) the Commitment Conditions;
   (d) Schedule A;
   (e) Schedule B, Part I—Requirements; and
   (f) Schedule B, Part II—Exceptions; and
   (g) a counter-signature by the Company or its issuing agent that may be in electronic form.

4. **COMPANY'S RIGHT TO AMEND**

   The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. **LIMITATIONS OF LIABILITY**
   (a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
      i. comply with the Schedule B, Part I—Requirements;
      ii. eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
      iii. acquire the Title or create the Mortgage covered by this Commitment.
   (b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
   (c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
   (d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.

(e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
(f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
(g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

6. **LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT**
(a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
(b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
(c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
(d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
(e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
(f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. **IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT**

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. **PRO-FORMA POLICY**

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. **ARBITRATION**

The Policy contains an arbitration clause. All arbitrable matters when the Proposed Policy Amount is $2,000,000 or less shall be arbitrated at the option of either the Company or the Proposed Insured as the exclusive remedy of the parties. A Proposed Insured may review a copy of the arbitration rules at http://www.alta.org/arbitration.

IN WITNESS WHEREOF, Land Title Insurance Corporation has caused its corporate name and seal to be affixed by its duly authorized officers on the date shown in Schedule A to be valid when countersigned by a validating officer or other authorized signatory.

The Planning Commission heard this at their February 12, 2019 meeting at recommended approval (5-0).

EXECUTIVE SUMMARY:

The Applicant, Southside Leasing, LLC is requesting the vacation of a four foot portion of Kimball Avenue and the vacation of the existing multi-purpose easement. The right-of-way (ROW) of Kimball Avenue consists of a 55-foot ROW dedication. The property line that would be re-located is on the north side of the two lots that compose this site of which the westerly lot is currently undeveloped and addressed as 1015 Kimball Avenue and the easterly parcel being addressed as 1101 Kimball Avenue and contains the historic Sugar Beet Factory. The resulting vacation, as proposed, would create a 51-foot wide right-of-way and an 8-foot-wide MPE for approximately 1,177 feet of the length of the properties. Kimball Avenue is designated a local street.

BACKGROUND OR DETAILED INFORMATION:

The subject site adjoining this portion of Kimball Avenue is developed with a brick structure known as the Sugar Beet Factory building which was constructed in 1900. Its historic use has been a warehouse function of various types including its obvious past use to store, package, and ship out sugar beets when that crop was a major

agricultural product in the Grand Valley. Although the building has endured periods of vacancy or underutilization, it has recently been used for an active warehouse function.

The Applicant has requested the City to allow a partial right-of-way and easement vacation of its frontage along Kimball Avenue in order to increase the size of developable property. The existing right-of-way width and MPE are described to be more than what is needed to serve a public street purpose and utility easement in this area.

The north property line for the two parcels (1015 and 1101 Kimball Avenue) extends in a straight line for 1,177 feet at which point it makes a slight deviation for another 91.5 feet or so in a slightly southwesterly direction. This 91.5-foot portion of ROW deviates in width due to ROW adjustments and acquisitions needed for the alignment of the Riverside Parkway in or around 2010. This 91.5 feet length of right-of-way is not included in the request for vacation; the requested vacation for both the right of way and MPE are only for the linear 1,177-foot length. The parkway borders the two properties to the south.

Local street rights-of-way may be reduced when warranted based on volume of use, type of traffic, existing improvements, zoning designations, character of area, and other factors, pursuant to the Transportation Engineering Design Standards (TEDS) manual. The Applicant petitioned for consideration for an Alternate Street Standard in September, 2018. The Alternate Street Committee approved the request to reduce the street width from 55 feet to 51 feet and to vacate the entire 14-foot wide multi-purpose easement. However, comments came back after the committee decision from CenturyLink noting existing facilities in the MPE and the need to retain an 8-wide portion of the MPE but that the additional six feet of MPE was not needed (see attached letter). In addition, the Committee required that the asphalt road surface be extended be one foot on the south side as a condition of the Alternative Streets approval; an improvement that will be required as part of any future development being reviewed under the City's Site Plan review process.

To date, CenturyLink's facility has not been located with the MPE. Staff recommends any vacation of the MPE be conditioned upon the location of the CenturyLink facility and assurance that the facility be located within the remaining portion of the MPE.

The result of these requested vacations, to summarize, is to: 1) vacate 4 feet of ROW, 2) vacate 14 feet of MPE, 3) create a new MPE of at least 8 feet abutting the new southern edge of Kimball Avenue ROW encompassing CenturyLink future utility needs, as illustrated in Exhibit A.

NOTIFICATION REQUIREMENTS:
A Neighborhood Meeting was held on July 30, 2018 consistent with the requirements of

Section 21.02.080 (e) of the Zoning and Development Code. A representative for the property owner, a consultant, and a City of Grand Junction Community Development Department were present, however, no citizens attended the meeting.

Notice was completed consistent with the provisions in Section 21.02.080 (g) of the City's Zoning and Development Code. Mailed notice of the application submittal in the form of notification cards was sent to surrounding property owners within 500 feet of the subject property and the subject property was posted with an application sign on January 21, 2019. The notice of this public hearing was published January 30, 2019 in the Grand Junction Daily Sentinel.

ANALYSIS:

Pursuant to Section 21.02.100 of the Zoning and Development Code, the vacation of a public right-of-way or easement shall conform to the following:

1) The Comprehensive Plan, Grand Valley Circulation Plan, and other adopted plans and policies of the City.

The following Comprehensive Plan goal and policy is relevant to this request:

Goal 6: Land use decisions will encourage preservation of existing buildings and their appropriate reuse.

Policy A. In making land use and development decisions, the City and County will balance the needs of the community.

The requested right-of-way and easement vacations, which is a reduction rather than elimination of these dedications, was reviewed and approved by the Alternative Street Committee which approved an asphalt width of 33 feet and a right-of-way width of 51 feet. Granting the right-of-way vacation would not compromise public safety or circulation and could provide greater flexibility for future development on the affected properties resulting in a desirable outcome for both public and private sector needs. This flexibility promotes balancing the needs of both the City and the private property owner and is consistent with the Goal 6, Policy A of the Comprehensive Plan. As such, Staff finds the requested vacation of excess width for the street right-of-way supports this policy. However, a MPE should only be reduced to eight (8) so that it can accommodate existing as well as future utilities.

The limited vacation of the right-of-way of four (4) feet and the reduction of the 14-foot MPE to 8 feet would be in satisfaction of this criterion.

2) No parcel shall be landlocked as a result of the vacation.

The request for a limited vacation will not compromise access to or landlock any properties.

Staff finds this criterion has been met.

3) Access to any parcel shall not be restricted to the point where access is unreasonable, economically prohibitive or reduces or devalues any property affected by the proposed vacation.

No restriction of access will result if this vacation request be granted
Staff finds this criterion has been met.

4) There shall be no adverse impacts on the health, safety, and/or welfare of the general community and the quality of public facilities and services provided to any parcel of land shall not be reduced (e.g. police/fire protection and utility services).

The vacation requests were referred to all of the potentially affected utility providers including Charter, Century Link, Grand Valley Power and Xcel Energy. All comments came back as either “No comments” or “No objections” except from Century Link. A letter dated 7/17/2018 states that Century Link needs to retain eight feet of the multi-purpose easement width for future needs. With a subsequent utility locate request, it has been determined that no facilities (including any belonging to CenturyLink) exist within the existing multipurpose easement. If granted, the 8-foot wide MPE would touch the new right-of-way line in the same manner as the two meet currently.

In addition, planning, transportation, fire department and engineering staff reviewed the alternative streets request to vacate four feet of the right-of-way and narrow the street width from 55 to 51 feet and found this to be an acceptable situation that would not negatively impact the transportation needs of the community. The remaining right-of-way width can sufficiently accommodate two lanes of travel, sidewalk on both sides and on-street parking on one side of the street. Staff believes no adverse impacts on the health, safety, and/or welfare of the general community would occur with the granting of the right-of-way request and the MPE, as modified.

Staff finds that this criterion is satisfied with conditions as provided in the Staff recommendation.

5) The provision of adequate public facilities and services shall not be inhibited to any property as required in Chapter 21.06 of the Grand Junction Municipal Code.

With the preservation of eight feet of multi-purpose easement, future public and/or utility facilities will retain the ability to use the MPE. A sidewalk is located on the north

side of Kimball Avenue so that pedestrians will continue to have safe mobility in this area of Grand Junction and if and when the property to the south redevelops, sufficient width has been retained to allow for sidewalks on the south side of Kimball Avenue as well. Staff has not identified any deleterious impacts associated with the right-of-way and modified MPE vacation request.

Staff finds this criterion is satisfied.

6) The proposal shall provide benefits to the City such as reduced maintenance requirements, improved traffic circulation, etc.

The area around the Sugar Beet Factory building is general commercial and light industrial in nature and traffic in the area is used by large, slow-moving tractor trailers and other heavy transport vehicles. The granting of the reduction in the street right-of-way would allow a slight enlargement of the two properties flanking the south side of Kimball Avenue (approximately 4,708 square feet), would retain sufficient right-of-way width for the continued maneuvering of industrial traffic, and would allow a reduction, albeit by only a slight amount, the area of public street the City is responsible to maintain.

Staff finds that this criterion has been satisfied.

PLANNING COMMISSION RECOMMENDATION AND FINDINGS OF FACT:

After reviewing VAC-2018-704, a request to 1) vacate a four-foot portion of the public right-of-way, 2) vacate the 14-foot wide multi-purpose easement (MPE), and 3) create a new multi-purpose easement with a minimum width of eight feet along the south side of the new edge of right-of-way for Kimball Avenue starting from the easterly edge of the South 12th Street alignment and extending 1,177 linear feet to its westerly terminus point , the Planning Commission recommended approval of the request with the following finds of fact:

1. The vacation requests conform with Section 21.02.100 (c) of the Grand Junction Zoning and Development Code.

And with the following condition:

1. The existing 14-foot wide multi-purpose easement shall be eliminated and a new multi-purpose easement shall be dedicated from the new edge of Kimball Avenue southward for 8 feet.

FISCAL IMPACT:

This land use action does not have any direct fiscal impact. Subsequent action such

as future development and related construction may have direct fiscal impact and will depend on the type of use.

SUGGESTED MOTION:

I move to introduce an ordinance vacating a four foot portion of the Kimball Avenue public right-of-way and reduce the 14-wide Multi-Purpose (MGE) to eight (8) feet and set a public hearing for March 6, 2019.

RE: Proposed release of Variable Width Multi-Purpose Easement along the northern portions of Lot 1 and Lot 2, Plat OLD MILL SUBDIVISION, recorded on May 5, 2010 at Reception No. 2532046, as it adjoins the southerly right-of-way of Kimball Avenue, terminating at the eastern portion of the vacated right-of-way of 12th Street at Lot 2, lying within the Southeast Quarter of the Northeast Quarter of Section 23, and the Southwest Quarter of the Northwest Quarter of Section 24, Township 1 South, Range 1 West, Ute Meridian, City of Grand Junction, County of Mesa, State of Colorado
PROJECT ADDRESS: 1015 Kimball Avenue
APN: 2945-231-39-001

To Whom It May Concern:

QWEST CORPORATION d/b/a CENTURYLINK QC has reviewed the request for subject release and has determined that it can release the variable width multi-purpose easement proposed for vacation, as highlighted on the attached, as long as **an 8' PUE is retained**. This Public Utility Easement will serve CenturyLink's current and future needs.

If it is necessary to relocate any of the facilities, please contact CenturyLink field engineer, Chris Johnson at Chris.Johnson5@CenturyLink.com or 970-244-4311. The Applicant will relocate the facilities at Applicant's expense and within guidelines set by CenturyLink and all regulating entities. All relocations will be done under the supervision of a CenturyLink Inspector.

This release of easement response is submitted with the **8' PUE STIPULATION.**

It is the intent and understanding of CenturyLink that this vacation shall not reduce our rights to any other existing easement or rights we have on these sites.

If you have questions or concerns, please call Pamela Haines at 206-714-6291.

Sincerely yours,

Karen Caime

Submitted to:	City of Grand Junction Community Development Department 250 N. 5th Street Grand Junction, CO 81501
Type of Design:	Right-of-Way Vacation
Applicant:	Southside Leasing, LLC 706 S. 9th Street, Ste 1 Grand Junction, CO 81501
Property Address:	1101 Kimball Avenue Grand Junction, CO 81501
Tax Schedule No.:	2945-231-39-002 2945-231-39-001 (no assigned address)

I. Project Description

The subject right-of-way is located in the City of Grand Junction, Colorado, and is located on the north property line of a parcel with no assigned address and 1101 Kimball Avenue. The parcels are part of the Old Mill Subdivision which is bordered by S. 9th Street on the west, Kimball Avenue on the north and Riverside Parkway on the South.

In anticipation of future development, the property owner of 1101 Kimball Avenue is petitioning the City of Grand Junction to vacate a 4' portion of the existing surplus Kimball Avenue right-of-way. An 8' multi-purpose easement along the south side of Kimball Avenue will be established as part of the vacation process to ensure adequate provision of utilities.

The existing right-of-way for Kimball Avenue is 55' with a 14' multi-purpose easement (except where the easement narrows to approximately 12' on the east end of Lot 2). The request to vacate 4' of the existing right-of-way will result in a total right-of-way of 51' which City staff has determined to be sufficient for the needs of the general public. Vacation of the surplus Kimball Avenue right-of-way will also result in an 8' multi-purpose easement along the 51' right-of-way which City staff has also determined to be sufficient.

Legal Description of surplus Kimball Avenue right-of-way to be added to Lot 1, Old Mill Subdivision:

Commencing at the E1/4 of Section 23, Township 1 South, Range 1 West, Ute Meridian, from which the C1/4 of Section 23 bears N89°36'03"W 2638.76 feet; running thence N00°15'42"W 305.33 feet to the existing south right-of-way line of Kimball Avenue; thence N89°13'27"W 342.73 feet to the NE corner of Lot 1, Old Mill Subdivision, and the Point of Beginning.

Running thence along the existing southerly right-of-way of Kimball Avenue the following two (2) courses: (1) N89°13'27"W 784.46 feet to a point of curve; (2) thence along said curve to the left 39.63 feet (R=273.00 feet, Delta=8°19'05", Chord Bears S86°37'00"W 39.60 feet); thence N82°27'28"E 36.59 feet to a point of curve; thence along said curve 21.78 feet (R= 150.00 feet, Delta=8°19'05", Chord Bears N86°37'00"E 21.76 feet); thence S89°13'27"E 766.05 feet; thence S00°46'33"W to the existing NE corner of Lot 1, Old Mill Subdivision, and the Point of Beginning.

Parcel contains 3169 sq. ft. (0.073 acres).

and

Legal Description of surplus Kimball Avenue right-of-way to be added to Lot 2, Old Mill Subdivision:

Commencing at the E1/4 of Section 23, Township 1 South, Range 1 West, Ute Meridian, from which the C1/4 of Section 23 bears N89°36'03"W 2638.76 feet; running thence N00°15'42"W 305.33 feet to the existing south right-of-way line of Kimball Avenue; thence S89°13'27"E 50.01 feet to the intersection of the southerly right-of-way of Kimball Avenue and the easterly right-of-way of S 12th Street, and the Point of Beginning.

Running thence along the existing southerly right-of-way of Kimball Avenue N89°13'27"W 392.74 feet to the existing NW corner of Lot 2, Old Mill Subdivision; thence N00°46'33"E 4.00 feet; thence S89°13'27"E 392.66 feet to the existing easterly right-of-way of S 12th Street; thence along said easterly right-of-way S00°15'42"E 4.00 feet to the existing southerly right-of-way of Kimball Avenue and the Point of Beginning.

Parcel contains 1571 sq. ft. (0.036 acres).

II. **Neighborhood Meeting**

A Neighborhood Meeting was held on July 30, 2018 at 1101 Kimball Avenue, for the purposes of discussing a proposed right-of-way (ROW) vacation request along the south side of Kimball Avenue. In attendance were Bryan Wiman, representing Southside Leasing, LLC (the owner), Kathy Portner with the City of Grand Junction Community Development Department, and Brian Rusche, Principal with Purposeful Planning, LLC, acting as owner's representative. No neighbors or other interested parties were in attendance. Information was available in the form of a FAQ sheet and drawing representing the proposed street section for Kimball Avenue as a result of the request to vacate 4' of the existing right-of-way.

Vortex Engineering, Inc. is now representing Mr. Wyman and has verified with Kathy Portner that a new Neighborhood Meeting is not required. This application is within the 180 days of the neighborhood meeting.

Approval Criteria

The applicant must comply with the provisions of Section 21.02.100, Vacation of Public Right-of-Way.

Section 21.02.100, Vacation of Right-of-Way states:

a) **Purpose.** The purpose of this section is to permit the vacation of surplus rights-of-way and/or easements.

b) **Applicability.** Applications for vacation of any street, alley, easement or other public reservation may be made by the City or by any owner of property on which the street, alley or public reservation lies or adjoins.

c) **Approval Criteria.** The vacation of the right-of-way or easement shall conform to the following:

1) The Comprehensive Plan, Grand Junction Circulation Plan and other adopted plans and policies of the City;
Response: The purpose of the request to vacate surplus right-of-way on Kimball Avenue is to facilitate development of two parcels located on Kimball Avenue. This request supports several Key Concepts of the Comprehensive Plan such as encouraging infill development, locating compact growth concentrated in the City Center and providing a transition between densities and providing mixed uses.

The request to vacate surplus right-of-way will not diminish the public's use of the street or the City's ability to maintain the street. There are no negative impacts anticipated with circulation or other transportation related concerns with the request to vacate the surplus right-of-way.

This critierion has been MET.

2) No parcel shall be landlocked as a result of the vacation;
Response: There are no parcels that will be landlocked as a result of vacating a portion of Kimball Avenue right-of-way as noted on the Exhibit depicting the area to be vacated.

This criterion has been MET.

3) Access to any parcel shall not be restricted to the point where access is unreasonable, economically prohibitive or reduces or devalues any property affected by the proposed vacation;
Response: Vacation of the existing surplus right-of-way will not restrict access to any parcel. The only parcels that will be impacted will be Lots 1 and 2 of the Old Mill Subdivision, which are located on the south side of Kimball Avenue. Property located on the north side of Kimball Avenue shall not be impacted by the request to vacate the surplus right-of-way.
This criterion has been MET.

4) There shall be no adverse impacts on the health, safety, and/or welfare of the general community, and the quality of public facilities and services provided to any parcel of land shall not be reduced (e.g., police/fire protection and utility services);
Response: There are two public services that will be impacted by this request: CenturyLink and Excel Energy. Both CenturyLink and Excel Energy provided letters stating that they had no objections to the proposed right-of-way vacation.

The applicant does not anticipate any adverse impacts on the health, safety, and/or welfare of the general community.

This criterion has been MET.

5) The provision of adequate public facilities and services shall not be inhibited to any property as required in Chapter 21.06 GJMC; and
Response: Public facilities and services shall not be inhibited in any way by the request to vacate the surplus right-of-way. City staff has determined what the sufficient required right-of-way should be (51' for this portion of Kimball Avenue) that is necessary for public use and maintenance of the street. An adequate multi-purpose easement shall be established to ensure that the provision of public facilities and services is not inhibited as required by Sec. 21.06 of the GJMC.

This criterion has been MET.

6) The proposal shall provide benefits to the City such as reduced maintenance requirements, improved traffic circulation, etc.
Response: The request to vacate supports a number of the Key Concepts and goals of the Comprehensive Plan. Vacation of the surplus right-of-way will reduce maintenance costs to the City and will facilitate development of two parcels that will provide jobs and property and sales taxes to the City.

This criterion has been MET.

III. Conclusion

After demonstrating how the request to vacate 4' of existing surplus right-of-way on Kimball Avenue meets the criteria of Section 21.02.100 of the Grand Junction Municipal Code, the applicant respectfully requests approval.

IV. Limitation/Restrictions

This report is a site-specific report and is applicable only for the client for whom our work was performed. The review and use of this report by the City of Grand Junction, affiliates, and review agencies is fully permitted and requires no other form of authorization. Use of this report under other circumstances is not an appropriate application of this document. This report is a product of Vortex Engineering & Architecture, Inc. and is to be taken in its entirety. Excerpts from this report that are taken out of context may not convey the true intent of the report. It is the owner's and owner's agent's responsibility to read this report and become familiar with recommendations and findings contained herein. Should any discrepancies be found, they must be reported to the preparing engineer within 5 days.

The recommendations and findings outlined in this report are based on: 1) The site visit and discussion with the owner, 2) the site conditions disclosed at the specific time of the site investigation of reference, 3) various conversations with planners and utility companies, and 4) a general review of the zoning and transportation manuals. Vortex Engineering & Architecture, Inc. assumes no liability for the accuracy or completeness of information furnished by the client or municipality/agency personnel. Site conditions are subject to external environmental effects and may change over time. Use of this report under different site conditions is inappropriate. If it becomes apparent that current site conditions vary from those reported, the design engineering should be contacted to develop any required report modifications. Vortex Engineering & Architecture, Inc. is not responsible and accepts no liability for any variation of assumed information.

Vortex Engineering & Architecture, Inc. represents this report has been prepared within the limits prescribed by the owner and in accordance with the current accepted practice of the civil engineering profession in the area. No warranty or representation either expressed or implied is included or intended in this report or in any of our contracts.

CITY OF GRAND JUNCTION, COLORADO

ORDINANCE NO. _____

AN ORDINANCE VACATING A FOUR-FOOT PORTION OF THE KIMBALL AVENUE PUBLIC RIGHT-OF-WAY AND REDUCING THE 14-FOOT WIDE MULTI-PURPOSE EASEMENT TO EIGHT (8) FEET

Recitals

The right-of-way and multi-purpose easement vacation of Kimball Avenue consists of a 1) vacate a four-foot portion of the public right-of-way, 2) vacate the existing 14-foot wide multi-purpose easement (MPE), and 3) dedicate a new multi-purpose easement with a minimum width of eight feet on the south side of the new right of way for Kimball Avenue starting from the easterly edge of the South 12th Street alignment and extending approximately 1,177 feet to the west.

The vacations impact properties addressed as 1015 & 1101 Kimball Avenue; the historic Sugar Beet Factory is located on the latter property.

After public notice and public hearing as required by the Grand Junction Zoning and Development Code, a recommendation of approval by the Planning Commission, the Grand Junction City Council finds that the request to vacate a four-foot portion of the public right-of-way, a reduction of the 14-foot wide multi-purpose easement (MPE) to eight (8) feet, a re-dedication of a new 8-foot wide MGE on the south side of Kimball Avenue starting from the easterly edge of the South 12th Street alignment and extending 1,177 feet to the west is consistent with the Comprehensive Plan, the Grand Valley Circulation Plan and Section 21.02.100 of the Grand Junction Municipal Code.

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

The following Right-of-Way (ROW) and multi-purpose easement (MGE) to be Vacated and an eight (8)-foot wide MPE to be re-dedicated directly south of the new ROW line – as depicted in Exhibit A and the vacations described as:

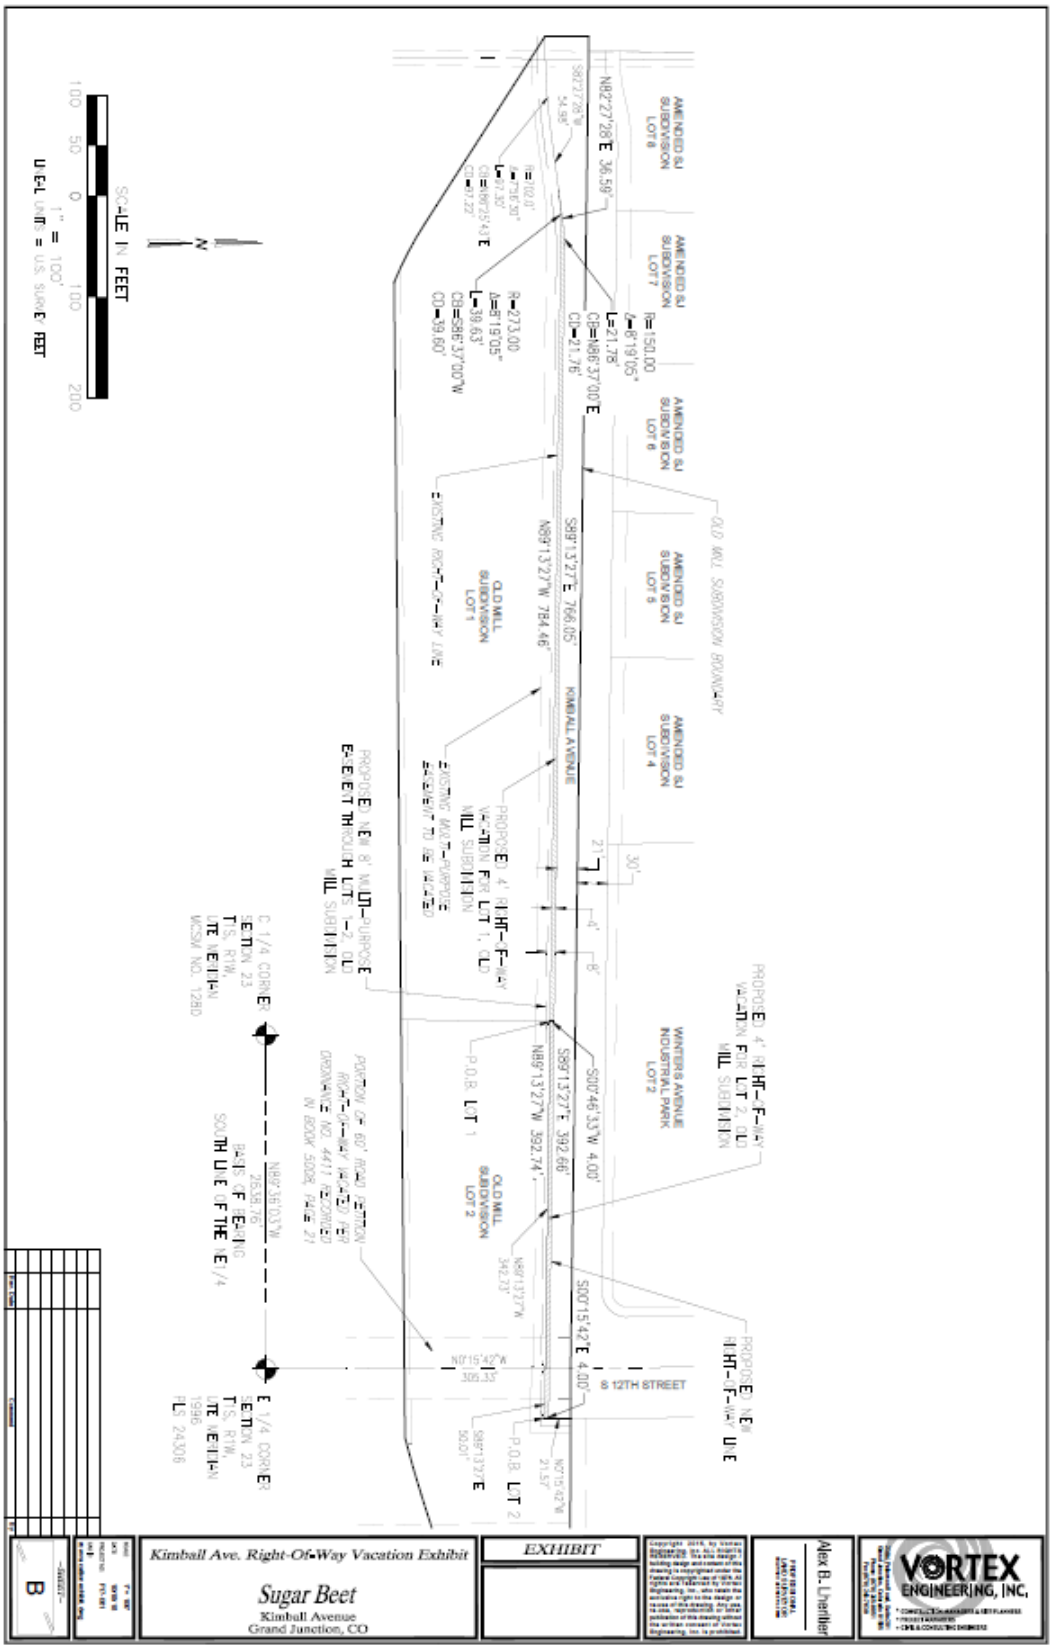
LOT 1 – 1015 Kimball Avenue

Kimball Avenue Right-of-way Vacation to Lot 1, Old Mill Subdivision
Beginning at the NE corner of Lot 1, Old Mill Subdivision, as same is recorded in Book 5008, Pages 27&28, Public Records of Mesa County, Colorado:
Running thence along the existing northerly line of said Lot 1 the following two (2) courses: (1) N89°13’27”W 784.46 feet to a point of curve; (2) thence along said curve to the left 39.63 feet (R=273.00 feet, Delta=8°19’05”, Chord Bears S86°37’00”W 39.60 feet); thence N82°27’28”E 36.59 feet to a point of curve; thence along said curve 21.78 feet (R= 150.00 feet, Delta=8°19’05”, Chord Bears N86°37’00”E 21.76 feet); thence S89°13’27”E 766.05 feet, said line being 4.00 feet north of and parallel with the existing north line of said Lot 1; thence S00°46’33”W 4.00 feet to the existing NE corner of said Lot 1 and the Point of Beginning.
Parcel contains 3169 sq. ft. (0.073 acres).

LOT 2- 1101 Kimball Avenue

Kimball Avenue Right-of-way Vacation to Lot 2, Old Mill Subdivision
Beginning at the NW corner of Lot 2, Old Mill Subdivision, as same is recorded in Book 5008, Pages 27&28, Public Records of Mesa County, Colorado:
Running thence N00°46'33" E 4.00 feet; thence S89°13'27" E 392.66 feet to the existing easterly right-of-way of S 12th Street, said line being 4.00 feet north of and parallel with the existing north line of said Lot 2; thence along said easterly right-of-way of S 12th Street S00°15'42" E 4.00 feet to the existing north line of said Lot 2; thence along the existing north line of said Lot 2 N89°13'27"W 392.74 feet to the existing NW corner of Lot 2 and the Point of Beginning.

Introduced on first reading this 20th day of February, 2019 and ordered published in pamphlet form.



Adopted on second reading this 6th day of March, 2019 and ordered published in pamphlet form.

Grand Junction City Council

Regular Session

Item #2.a.viii.

Meeting Date: February 20, 2019

Presented By: Tom Dixon, Planner

Department: Community Development

Submitted By: Tom Dixon

Information

SUBJECT:

Introduction of a Proposed Ordinance Rezoning Two Properties from R-16 (Residential 12-16 du/ac) to R-24 (Residential 24+ du/ac) Located at 1213 North 15th Street and 1420 Glenwood Avenue and Set a Public Hearing for March 6, 2019

RECOMMENDATION:

Planning Commission recommended approval at their January 22, 2019 hearing (5-0).

EXECUTIVE SUMMARY:

The Applicant, W&C Stocker Family Trust, is requesting the rezone of the combined 0.62-acre properties (total) located at 1213 North 15th Street and 1420 Glenwood Avenue from the R-16 (Residential, 12-16 du/ac) to the R-24 (Residential, 24+ du/ac) zone district in anticipation of future multi-family residential development. The requested R-24 zone district is consistent with the Comprehensive Plan Future Land Use designation of Village Center.

BACKGROUND OR DETAILED INFORMATION:

The subject properties are located at 1213 North 15th Street and 1420 Glenwood Avenue. Each of the two properties is presently developed with an older stock single-family residence; in addition, the 1213 North 15th Street property contains an old, partly re-furbished barn structure which is located near the Glenwood Avenue frontage. Both the residence and barn on the 1213 North 15th property were constructed in 1913; the house at 1420 Glenwood was built in 1950. The development plan, provided that the rezone request is granted, is to demolish all structures to allow for the construction of a new multi-family development.

In the vicinity surrounding the subject properties to the east, north, and west is both single-family and multi-family residential development. To the south is commercial development predominantly oriented toward North Avenue and its business-focused corridor. An R-16 zone district is in place for the area to the east, north, and west while a transition to C-1 (Commercial) occurs south of Glenwood Avenue to North Avenue. The North Avenue Overlay Zone abuts North Avenue and on some properties extends to Glenwood Avenue, but does not extend north of Glenwood Avenue to this site.

The Village Center Employment overlay is a mixed use designation for residential, service, park and retail. It is intended to be at a smaller scale (1 – 5 stories and smaller land area) than Downtown Mixed Use.

ANALYSIS

Pursuant to Section 21.02.140 of the Grand Junction Zoning and Development Code, the City may rezone property if the proposed changes are consistent with the vision, goals and policies of the Comprehensive Plan and must meet one or more of the following criteria:

(1) Subsequent events have invalidated the original premise and findings; and/or

The Comprehensive Plan includes a Future Land Use Map which identifies these two properties designated as Village Center. Both the Applicant's proposed zoning of R-24 as well as the existing designation of R-16, implements the Future Land Use Map designation of Village Center. The existing zoning of R-16 continues to be a valid zone district under the Comprehensive Plan as does the proposed R-24.

Since the adoption of the Village Center designation more than seven years ago there have been incremental improvements to the North Avenue corridor and to the surrounding residential neighborhood largely due to the implementation of the North Avenue Overlay Zone. Staff recognizes these changes in aggregate as a subsequent event(s) that work to invalidate the original premise of the existing zoning (R-16). However, changes in the area, such as improvements that include a 16-unit apartment building constructed in 2012 directly across the street from the residence at 1213 North 15th and a Taco John's drive through restaurant built in 2014 and located at 1430 North Avenue, illustrate that transition of the area has been slow.

Staff finds that, despite positive changes and the ability to increase densities through rezones that are supported by the Future Land Use Map, the original premises and findings of the current R-16 are not necessarily invalidated.

Therefore, this criterion has not been satisfied by the proposed rezone nor by the

Village Center designation.

(2) The character and/or condition of the area has changed such that the amendment is consistent with the Plan; and/or

The City has seen the land use character within the immediate vicinity of the proposed rezone incorporate some gradual yet steady improvements since the adoption of the North Avenue Corridor Plan and Zoning Overlay over seven years ago. New or redeveloped sites one block to the south along North Avenue and the City's sidewalk and streetscape improvements along North Avenue between 12th Street and 23rd Street are upgrades to the commercial neighborhood. In residential areas north of Glenwood Avenue, there are scattered sites being redeveloped with higher densities which is in contrast to a number of properties (including the subject ones) that are suffering from upkeep and other issues having the effect of eroding property values and creating an undesirable impact upon the neighborhood. The prospect to up-zone property through owner initiation provides expanded opportunities and incentives to continue and, perhaps, even increase the timing of enhanced neighborhood change.

The proposed rezone will support the City's objective to make progressive improvements to the neighborhood with the intention of changing the character and conditions of the area while combating or reducing potential urban blight and reduction of property values. Likewise, the rezone to R-24 will provide an opportunity to upgrade this visible corner of the neighborhood and support the North Avenue and North 12th Street businesses.

Based on the existing character and the condition of these depressed properties, as well as new development that has occurred on selected sites in the neighborhood, staff finds that both the condition and the character have changed such that this amendment is consistent with the Plan and therefore this criterion has been met.

(3) Public and community facilities are adequate to serve the type and scope of land use proposed; and/or

The subject properties are within a fully urbanized area of the City of Grand Junction and adequate public and community facilities and services are available and sufficient to serve the anticipated re-development. The properties are currently served by City water and sewer, Xcel Energy electricity and natural gas, and cable network links. Access to nearby commercial facilities, retail, offices, and restaurants along North Avenue and the proximity of Colorado Mesa University and the North 12th Street mixed-use corridor are within three or four blocks. In addition, Grand Valley Transit provides bus service along both directions of North Avenue with stops just west of North 14th Street.

Based on the provision and concurrency of public utilities and community facilities to serve the rezone request, staff finds that this criterion has been met.

(4) An inadequate supply of suitably designated land is available in the community, as defined by the presiding body, to accommodate the proposed land use; and/or

By virtue of designating this area as appropriate for higher residential density and greater commercial and residential intensity, the presiding bodies that adopted the Comprehensive Plan and the Future Land Use Map acknowledged that there was an inadequate supply of suitably designated land to accomplish the goals and objectives in supporting the designation of Village Center. Otherwise, there would not have been a basis for zoning classifications that provided greater incentives of use.

In the neighborhood for this proposed rezone, there is presently an absence of R-24 zoning that is needed to provide additional development incentives and opportunities to create timely upgrades to the area and to create the desired higher density residential units to expand housing options. Therefore, the proposed rezone appears to be a reasonable request in response to the need and desire to increase the supply of suitably designated higher density residential land within the City and in particular the City Center as called out in the Comprehensive Plan.

Based on these considerations, this criterion is deemed to be sufficiently satisfied.

(5) The community or area, as defined by the presiding body, will derive benefits from the proposed amendment.

The community will derive benefits from the proposed rezone by creating an opportunity for the land to be developed with greater density which is a reflection of the transition occurring in neighborhoods to the east of Colorado Mesa University.

The Future Land Use designation of Village Center contemplates a mix of employment, residential, service, park and retail uses at higher densities and intensities of development that should result in community benefits which is equally or better implemented by the R-24 than the R-16 zone district. Therefore, staff finds that this criterion is satisfied.

This rezone request is consistent with the following vision, goals and/or policies of the Comprehensive Plan:

Goal 3: The Comprehensive Plan will create ordered and balanced growth and spread future growth throughout the community.

Policy A: To create large and small “centers” throughout the community that provide

services and commercial areas.

Policy B: Create opportunities to reduce the amount of trips generated for shopping and commuting and decrease vehicle miles traveled thus increasing air qualities.

Goal 5: To provide a broader mix of housing types in the community to meet the needs of a variety of incomes, family types and life stages.

Policy A: In making land use and development decisions, the City and County will balance the needs of the community.

Policy B: Encourage mixed-use development and identification of locations for increased density.

Policy C: Increasing the capacity of housing developers to meet housing demand.

STAFF RECOMMENDATION AND FINDINGS OF FACT

After reviewing RZN-2018-724, a request to rezone 0.62 acre from the R-16 (Residential, 12-16 du/ac) to the R-24 (Residential, 24+ du/ac) zone district, staff recommends approval of the request with the following findings of fact:

1. The requested zone is consistent with the goals and policies of the Comprehensive Plan;

2. In accordance with Section 21.02.140 of the Grand Junction Zoning and Development Code, one or more of the criteria have been met.

FISCAL IMPACT:

This land use action does not have any direct fiscal impact. Subsequent action such as future development and related construction may have direct fiscal impact and will depend on the type of use.

SUGGESTED MOTION:

I move to introduce an ordinance zoning properties at 1312 North 15th Street and 1420 Glenwood Avenue from R-16 (Residential 12-16 du/ac) to R-24 (Residential 24+ du/ac) and set a public hearing for March 6, 2019.

Property Owner:	W&C Stocker Family Trust 1878 K Road Fruita, CO 81521
Property Address:	1213 N. 15th Street and 1420 Glenwood Avenue Grand Junction, CO 81501
Tax Schedule No:	2945-123-00-091 and -092

1. **Project Intent**

This application is made to request a rezone of approximately .62 acres located at 1213 N. 15th Street and 1420 Glenwood Avenue from R16 (Residential 12-16 du/ac) to R24 (Residential, 16+ du/ac) in anticipation of future multi-family residential development.

2. **Project Background and Description**

The subject properties are located at 1213 N. 15th Street and 1420 Glenwood Avenue and are currently zoned R16 (12-16 du/ac). The applicant would like to rezone to the R24 zone district to construct multi-family dwelling units to be known as Stocker Suites.

The site is made up of two parcels with a total of approximately .62 acres. The site is bounded by residential uses to the north, east and west, commercial uses to the south. There is one single family home located on each of the two parcels with an older barn structure also located on 1213 N. 15th Street. These structures will either be removed or demolished to allow construction of the development.

The applicant would like to construct approximately 15 multi-family dwelling units on the two parcels. The current R16 would allow up to 12 dwelling units; therefore a

The applicant would like to construct a multi-family development that is very similar to what exists in the surrounding area with duplex, triplex and higher density multi-family dwelling units. Existing conditions of the surrounding area are noted on the map below.

Legal Description

The legal description of this site is as follows:

1420 Glenwood Avenue (2945-123-00-091):
BEG S 0DEG01'06SEC W 294.35FT & W 215.03FT FR NE COR LOT 2 GRANDVIEW SUB SEC 12 1S 1W W 50FT N 142.50FT E 50FT S 142.50FT TO POB

3. Neighborhood Meeting

A Neighborhood Meeting was held on Wednesday, November 14, 2018 at 5:30 pm at the Four Winds Coffee and Tea, located at 1235 Bookcliff Avenue, Grand Junction. The owner's representative provided an overview of the rezone request and a brief overview of the proposed development. Kris Ashbeck, Senior Planner with the City of Grand Junction also attended the meeting to answer questions about the City's rezone review process. A list of all those attending the meeting is attached to this report, as well as the primary issues of concern that were discussed during the meeting.

The meeting was attended by two (2) citizens and comments and questions were addressed by the applicant's representative and Kris Ashbeck from the City of Grand Junction.

Public notice for this application will be provided in accordance with Sec. 21.02.080(g) of the Grand Junction Municipal Code, including posting the subject properties on all public rights-of-way.

4. **Comprehensive Plan**

The Comprehensive Plan's Future Land Use Map shows the subject property as Village Center Mixed Use (VCMU, 8-24 du/ac). The proposed density of the R24 zone district (minimum 16 du/ac) is in keeping with existing land use development patterns of the surrounding neighborhood where up to 31 du/ac exist, and what is anticipated by the Village Center land use classification.

Redevelopment of the existing parcels would be considered an infill development due to the location within the community and the presence of existing utilities to serve the site. The subject property is located within the 201 Sewer Service Boundary and the Urban Development Boundary which is expected to develop and/or redevelop with urban densities and services.

The proposed development meets a number of the goals and policies of the Comprehensive Plan:

Goal 1, Policy D: For development that requires municipal services, those services shall be provided by a municipality or district capable of providing municipal services.
Goal 3: The Comprehensive Plan will create ordered and balanced growth and spread future growth throughout the community.

In addition to the goals and policies, the proposed development also meets the following Guiding Principles of the Comprehensive Plan:

Guiding Principle 2: Sustainable Growth Patterns – Fiscal sustainability where we grow efficiently and cost-effectively. Encourage infill and redevelopment and discourage growth patterns that cause disproportionate increases in cost of services.

Guiding Principle 3: Housing Variety – Allow, encourage more variety of housing types (more than just large lot single family homes) that will better meet the needs of our diverse population – singles, couples, families, those just starting out, children who have left home, retirees, etc.

5. **Zoning and Surrounding Areas**

The applicant is requesting a rezone from the current R16 (Residential 12-16 du/ac) to R24 (Residential, 16+ du/ac) for future multi-family residential development. This request is consistent with, and supports, the Comprehensive Plan's Future Land Use Map classification of Village Center Mixed Use (VCMU, 8-24 du/ac).

Surrounding area zoning and land uses include:

North – R16 (Residential, 12-16 du/ac) with single and multi-family residential land uses
South – Light Commercial (C-1) with commercial land uses
West – R16 (Residential, 12-16 du/ac) with single and multi-family residential land uses
East – R16 (Residential, 12-16 du/ac) with single and multi-family residential land uses

The purpose of the R24 zone district is to provide for high density residential use. This district allows multi-family development within specified densities. R-24 may serve as a transitional district between single-family and trade zones. This district is intended to allow high density residential unit types and densities to provide a balance of housing opportunities in the community. It is appropriate in the Village and Neighborhood Centers.

The area surrounding the subject property is already an area of residential transition between North Avenue located one block to the south which is zoned Light Commercial, C-1, and the area to the north which is a mix of single and multi-family land uses primarily zoned R16.

It should be noted that although the area to the north, east and west of the subject property is zoned R16, there are several properties that are developed at a density higher than 16 dwelling units per acre, which is the maximum density permitted by the R16 zone district. This trend in the existing land use would suggest that a higher density is more desirable and acceptable given the proximity to North Avenue and the C-1 zoning along that corridor. Higher density housing is a logical support for the commercial land uses of the North Avenue corridor.

6. **Utility Providers**

All required and necessary utilities shall be provided concurrent with development of the subject property. Utility providers for the Elevation 4591 development have the capacity and willingness to serve the development. Public facilities such as medical, schools, parks and public safety are available to serve development on this site.

Utility providers for the site are as follows:

Sewer: City of Grand Junction/Persigo Wastewater Treatment Plant
Water: City of Grand Junction Water District
Gas/Electric: Xcel Energy
Drainage: Grand Valley Drainage District
Irrigation: Grand Valley Irrigation Company
Cable: Spectrum

7. **Drainage**

The topography of the site is generally flat with a high point of 4624' at the northeast corner of the property, then gently sloping to the southwest with a low point of 4622'. Stormwater drainage will be addressed under a separate development application at the time of actual construction of the multi-family dwelling units.

8. **Wetlands and Floodplain**

There are no known wetlands or floodplains associated with the subject property. The property is located within Flood Zone X which is outside the .02% annual chance of floodplain.

9. **Approval Criteria**

Section 21.02.140(a), **Approval Criteria.** In order to maintain internal consistency between this code and the zoning maps, map amendments must only occur if:

(1) Subsequent events have invalidated the original premises and findings; and/or

Response: Subsequent events have not invalidated the original premises for the anticipated land development of this area of the community. Both the Growth Plan and subsequent Comprehensive Plan anticipated residential development in this area of the community.

This criterion is not applicable.

(2) The character and/or condition of the area has changed such that the amendment is consistent with the Plan; and/or

Response: The majority of this neighborhood was developed prior to adoption of the current Comprehensive Plan and 2010 Zoning and Development Code. As such, there are pockets of development in the surrounding neighborhood that have been developed at densities that exceed the maximum permitted density for the current R16 zoning. In addition to the existing mix of single and multi-family development, the North Avenue Overlay district was also adopted subsequent to the Comprehensive Plan and 2010 Zoning and Development Code. The North Avenue corridor is zoned Light Commercial, C-I, and permits land uses that are compatible with the proposed R24 zone district.

Another change in this area of the community is reflected in the expansion of the Colorado Mesa University (CMU) campus. Numerous classroom buildings have been constructed on campus in recent years to support the growing study body and curriculum. Many of the CMU students chose to live off-campus which puts growing pressure on the community to provide additional housing units such as those proposed for the subject property should it be rezoned.

The proposed rezone to R24 supports and is consistent with the Village Center Mixed Use land use classification of the Comprehensive Plan.

This criterion has been MET.

(3) Public and community facilities are adequate to serve the type and scope of land use proposed; and/or

Response: All required and necessary utilities shall be constructed concurrent with development of the subject property. Utility providers for the subject property have the capacity and willingness to serve future development. Public facilities such as medical facilities, schools, library and parks are adequate to serve the scope of anticipated residential development and are currently available within walking distance of the subject property.

This criterion has been MET.

(4) An inadequate supply of suitably designated land is available in the community, as defined by the presiding body, to accommodate the proposed land use; and/or

Response: There are very few parcels of land within the community with a zoning of R24 that allows higher density development. The fact that several nearby parcels are developed at a density level that exceeds 16 dwelling units per acre (the maximum density permitted in the R16 zone district) suggests that there is in fact an inadequate supply of land designated for higher residential density.

This criterion has been MET.

(5) The community or area, as defined by the presiding body, will derive benefits from the proposed amendment.

Response: The immediate area, and the community overall, will benefit from the provision of higher density residential development that is constructed near the City Center and so many services within walking distance, including upper level education, medical, recreational and multiple food services. In addition to being in a walkable part of the community, the higher density provides much needed housing and makes more efficient use of the existing infrastructure such as streets, water and sewer lines, sidewalks, etc. More compact development benefits the community as a whole through more efficient use of infrastructure.

This criterion has been MET.

10. Development Schedule

It is anticipated that the request to rezone will be reviewed and scheduled for Planning Commission recommendation to City Council in approximately 8-10 weeks. The proposed residential development will be submitted under a separate land use application upon approval of the rezone request.

11. Conclusion

The request to rezone from R16 (Residential 12-16 du/ac) to R24 (Residential, 16+ du/ac) supports the Comprehensive Plan's Future Land Use Map classification of Village Center Mixed Use. After demonstrating how the requested rezone meets the goals, policies and Guiding Principles of the Comprehensive Plan and the approval criteria of the Zoning and Development Code, we respectfully request approval of the request to rezone to the R24 zone district.

12. Limitations/Restrictions

This report is a site-specific report and is applicable only for the client for whom our work was performed. The review and use of this report by City of Grand Junction, affiliates, and review agencies is fully permitted and requires no other form of authorization. Use of this report under other circumstances is not an appropriate application of this document. This report is a product of Vortex Engineering, Inc. and is to be taken in its entirety. Excerpts from this report when taken out of context may not convey the true intent of the report. It is the owner's and owner's agent's responsibility to read this report and become familiar with recommendations and findings contained herein. Should any discrepancies be found, they must be reported to the preparing engineer within 5 days.

The recommendations and findings outlined in this report are based on: 1) The site visit and discussion with the owner, 2) the site conditions disclosed at the specific time of the site investigation of reference, 3) various conversations with planners and utility companies, and 4) a general review of the zoning and transportation manuals. Vortex Engineering, Inc. assumes no liability for the accuracy or completeness of information furnished by the client or municipality/agency personnel. Site conditions are subject to external environmental effects and may change over time. Use of this report under different site conditions is inappropriate. If it becomes apparent that current site conditions vary from those reported, the design engineering should be contacted to develop any required report modifications. Vortex Engineering, Inc. is not responsible and accepts no liability for any variation of assumed information.

Vortex Engineering, Inc. represents this report has been prepared within the limits prescribed by the owner and in accordance with the current accepted practice of the civil engineering profession in the area. No warranty or representation either expressed or implied is included or intended in this report or in any of our contracts.

Neighborhood Meeting Notes/List of Attendees
November 14, 2018

November 19, 2018

City of Grand Junction
Kris Ashbeck, Senior Planner
250 N. 5th Street
Grand Junction, CO 81501

RE: Neighborhood Meeting - Rezone
Stocker Suites
Date: Wednesday, November 14, 2018
Time: 5:30 p.m. – 6:30 p.m.
Location: Four Winds Coffee & Tea

Dear Ms. Ashbeck:

On Wednesday, November 14, 2018, a Neighborhood Meeting was held from 5:30 – 6:30 pm at the Four Winds Coffee & Tea for the proposed Stocker Suites rezone. An overview of the proposed rezone to R24 was presented by Lisa Cox of Vortex Engineering, Inc., followed by questions from the neighborhood residents.

The meeting was attended by two (2) residents. Comments and concern were voiced during the meeting. No written comments were received.

The following is a synopsis of the questions posed by the neighborhood residents:

- What is the difference between R16 and R24?
- When will demolition begin?
- Concern regarding windows on the north side looking down on other property.
- What is the process?
- Where will access be to the property?
- What will the impact of traffic be?

Lisa Cox with Vortex Engineering, Inc., stated that the property is currently zoned R16 and we are submitting for a R24 zone. She explained that the Comprehensive Plan, which is the City of Grand Junction and Mesa County's long range plan, designates parcels with a range of densities that are implemented by various zone districts and the R24 zone is consistent with the vision of the city.

Kris Ashbeck, Senior Planner with the City of Grand Junction was there to provide information and answer questions specific to City Policies and Procedures. Kris explained that residents will be notified of future applications; however another neighborhood meeting is not required.

At 5:53 p.m. Lisa Cox thanked those who attended the neighborhood meeting and shared their concerns. The meeting was then closed.

Upon your review of the meeting notes, should you have any questions or amendments, please do not hesitate to contact me at 970-245-9051.

Sincerely,

Robert W. Jones II, P.E.
Vortex Engineering & Architecture, Inc.

RE: Stocker Suites Rezone
1420 Glenwood Ave. & 1213 N. 15 St.
Grand Junction, CO 81501

Dear Property Owner:

The above referenced property will soon be the subject of a Rezone application with the City of Grand Junction's Community Development Department. A Neighborhood Meeting will be held to introduce the proposed rezone to you and to answer any questions that you might have about the project.

A Neighborhood meeting will be held on Wednesday, November 14, 2018 at 5:30 pm at the Four Winds Coffee & Tea, located at 1235 Bookcliff Avenue, Grand Junction.

The Neighborhood Meeting is held to allow the neighborhood an opportunity to understand the rezone request, answer questions and to collect neighbor's thoughts and ideas about the new development. The property owner's representative and a City Planner will be at the meeting to discuss the new development. We hope to see you there too!

Please don't hesitate to contact me at 970-245-9051, or by email at rjones@vortexeng.us should you have any questions about this project.

Sincerely,

Vortex Engineering & Architecture, Inc.

Robert W. Jones, II, P.E.

ORDINANCE NO.

AN ORDINANCE ZONING PROPERTIES AT 1312 NORTH 15TH STREET AND 1420 GLENWOOD AVENUE FROM R-16 (RESIDENTIAL, 12-16 DU/AC) TO R-24 (RESIDENTIAL, 24+ DU/AC)

Recitals

The property owner has requested a Rezone for 0.625 acre of land from R-16 to the R-24 zone district.

After public notice and public hearing as required by the Grand Junction Municipal Code, the Grand Junction Planning Commission recommended approval of rezoning 1213 North 15th Street and 1420 Glenwood Avenue from the R-16 (Residential, 12-16 du/ac) to the R-24 (Residential, 24+ du/ac) zone district finding that it conforms with the recommended land use category as shown on the future land use map of the Comprehensive Plan and the Comprehensive Plan's goals and policies and is generally compatible with land uses located in the surrounding area. The zone district meets the criteria found in Section 21.02.140 of the Grand Junction Municipal Code.

After public notice and public hearing before the Grand Junction City Council, City Council finds that the R-24 (Residential, 24+ du/ac) zone district is in conformance with the stated criteria of Section 21.02.140 of the Grand Junction Municipal Code.

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

The following properties be rezoned R-24 (Residential, 24+ du/ac).

1213 North 15th Street

Commencing at the Northeast Corner of Lot 2 of Grandview Subdivision and assuming the East line of Lot 2 to bear South 00deg.01'06" West with all bearings herein relative thereto; thence South 00deg.01'06" West a distance of 294.35 feet to a point; thence South 90deg.00'00" West a distance of 10.84 feet to the True Point of Beginning; thence South 90deg.00'00" West a distance of 204.19 feet; thence North 00deg.00'00" East a distance of 142.50 feet; thence North 90deg.00'00" East a distance of 52.00 feet; thence North 00deg.00'00" East a distance of 51.85 feet; thence South 90deg.00'00" East a distance of 3.00 feet; thence South 00deg.00'00" East a distance of 116.00 feet; thence North 90deg.00'00" East a distance of 155.06 feet; thence South 00deg.01'06" West a distance of 71.84 feet; thence South 41deg.55'51" West a distance of 8.75 to the True Point of Beginning, Mesa County, Colorado.

1420 Glenwood Avenue

Commencing at the NE Corner of Lot 2 of Grandview Subdivision and assuming the East line of Lot 2 to bear South 00deg.01'06" West with all bearings herein relative thereto; thence South 00deg.01'06" West a distance of 294.35 feet to a point; thence South 90deg.00'00" West a distance of 215.03 feet to the true point of beginning; thence North 90deg.00'00" West a distance of 50.00 feet; thence North 00deg.00'00" East a distance of 142.50 feet; thence North 90deg.00'00" East a distance of 50.00 feet; feet; thence South 00deg.00'00" East a distance of 50.00 feet; thence South 00deg.00'00" East a distance of 142.50 feet to the true point of beginning;

Together with any and all water, water rights, ditch and ditch rights belonging thereto.

CONTAINING 27,225 Square Feet or 0.625 Acre, more or less, as described.

INTRODUCED on first reading the 20th day of February, 2019 and ordered published in pamphlet form.

ADOPTED on second reading the 6th day of March, 2019 and ordered published in pamphlet form.

Grand Junction City Council

Regular Session

Item #2.a.ix.

Meeting Date: February 20, 2019

Presented By: Jace Hochwalt, Associate Planner

Department: Community Development

Submitted By: Jace Hochwalt, Associate Planner

Information

SUBJECT:

A Resolution Referring a Petition to the City Council for the Annexation of Lands to the City of Grand Junction, Colorado, Setting a Hearing on Such Annexation, Exercising Land Use Control, and Introducing Annexation Ordinance for the Arlington Annexation, which is a Serial Annexation Consisting of Arlington Annexation No. 1 and Arlington Annexation No. 2, Totaling 1.41 acres, Located at 265 Arlington Drive and Set a Public Hearing for April 3, 2019

RECOMMENDATION:

Staff recommends adoption of a resolution referring the petition for the Arlington Annexation, introducing the proposed Ordinance and setting a hearing for April 3, 2019.

EXECUTIVE SUMMARY:

The Applicant, Hammerhead Development, LLC, has requested annexation of their 0.64-acre property located at 265 Arlington Drive. The proposed annexation includes 0.77-acres of adjacent Arlington Drive and Oxford Avenue right-of-way. The subject property currently sits vacant. The Applicant is requesting annexation for future residential subdivision development of the property, which is anticipated to constitute "annexable development" and as such is required to annex in accordance with the Persigo Agreement. Consideration for zoning of this annexation will be heard in a future action.

BACKGROUND OR DETAILED INFORMATION:

The Arlington annexation consists of one 0.64-acre parcel of land and 0.77 acres of

adjacent right of way (total of 1.41 acres of land to be annexed) located at 265 Arlington Drive. The property is currently vacant. The Applicant plans to subdivide the property into three residential lots and is requesting annexation at this time in anticipation of this development. The Applicant is requesting an R-4 (residential with a maximum of 4 units per acre) zone district. Zoning will be considered in a future action and requires review and recommendation by the Planning Commission.

The subject property is directly adjacent to city limits to the south, while other adjacent properties are situated in unincorporated Mesa County. It should be noted that all adjacent improved properties are connected to City sewer services, as a sewer line extends north to south along Arlington Drive. Additionally, the subject property is within the Persigo 201 boundary and is annexable development as defined in the Persigo Agreement. Under the 1998 Persigo Agreement with Mesa County, all proposed development within the Persigo Wastewater Treatment Facility boundary requires annexation by the City. The property owner has signed a petition for annexation of the property.

Staff has found, based on review of the petition and knowledge of applicable state law, including the Municipal Annexation Act Pursuant to C.R.S. 31-12-104, that the Arlington Annexation is eligible to be annexed because of compliance with the following:

a) A proper petition has been signed by more than 50% of the owners and more than 50% of the property described;

b) Not less than one-sixth of the perimeter of the area to be annexed is contiguous with the existing City limits;

c) A community of interest exists between the area to be annexed and the City. This is so in part because the Central Grand Valley is essentially a single demographic and economic unit and occupants of the area can be expected to, and regularly do, use City streets, parks and other urban facilities;

d) The area is or will be urbanized in the near future;

e) The area is capable of being integrated with the City;

f) No land held in identical ownership is being divided by the proposed annexation;

g) No land held in identical ownership comprising 20 contiguous acres or more with an assessed valuation of $200,000 or more for tax purposes is included without the owner’s consent.

The proposed annexation and zoning schedule with a summary is attached.

FISCAL IMPACT:

The provision of municipal services will be consistent with adjacent properties already in the City. Property tax levies and municipal sales/use tax will be collected, as applicable, upon annexation. More specific impacts to various service providers of the City include the following.

Police Department:
In an effort to determine/anticipate what the impact may be to the GJPD in providing police services should the city proceed with this annexation, calls for service during 2017 and 2018 were pulled. A review of that data revealed that there were only 19 calls for service in 2017 and 31 calls for service in 2018 to that surrounding area which is similar in residential density. Based on that information we anticipate that any calls for service by GJPD for this location will equal to 1.2% of an officer. With that said, at this point, we do not anticipate a need for an increase in personnel or equipment in order to provide law enforcement services to this proposed annexation. However, this annexation along with any future annexations/developments will no doubt have an eventual cumulative impact that will require an increase in law enforcement personnel and equipment in order to provide adequate services**.**

Public Works:
Annual Maintenance costs for the 21,200 square feet / 500 linear feet of pavement on Arlington Drive is estimated at approximately $90/year to sweep, stripe and sign, and maintain the 130 ft of storm drain facilities. Street lighting expenses for the three street lights will run $612 per year. Future chipseal costs for this road is estimated at $5,800 and is planned as part of this area's normal chip seal cycle in the next five years. As the existing street includes some curb, gutter, and sidewalk, the only major capital expenses anticipated are a small replacement of concrete and the construction of two curb ramps for less than $10,000.

Fire:
The provision of municipal services will be consistent with adjacent properties already in the City. Property tax levies and municipal sales/use tax will be collected, as applicable, upon annexation. Based on the current assessed values of the annexation area, the City property tax revenue is estimated to be $80 annually. If the property develops at the estimated three single family units for an estimated total improvements value of $900,000, the estimated annual property tax revenue (at the current residential assessment rate) would be approximately $518 per year. Sales and use tax revenues will be dependent on construction activity and consumer spending on City taxable items for residential and commercial uses.

Currently the property is in the Grand Junction Rural Fire Protection District (Rural District) which is served by the Grand Junction Fire Department through a contract with the Rural District. The Rural District collects a 5.938 mill levy that generates $59.20 per year in property taxes that are passed on to the City of Grand Junction per the contract. If annexed, the Rural District mill levy will be removed and the City's 8 mills that will generate $80 per year (prior to development) and $518 per year after estimated planned development which will need to pay for not only fire and emergency medical services but also other City services provided to the area. City services as discussed below are supported by a combination of property taxes and sales/use taxes.

No changes in fire protection and emergency medical response are expected due to this annexation. Primary response is from Fire Station 4 at 2884 B ½ Road and response time from the station is within National Fire Protection Association guidelines. The incident load for this development is predicted to be minimal.

Parks:
There are no anticipated impacts to the Parks Department with this proposed annexation. Parks and Recreation fees will be collected with the future subdivision of this property.

Utilities:
Water and sewer services are available to this property. This property is within the Ute Water District service area. An 8-inch water line crosses this property along the northern and western property boundary. The property is currently within the Persigo 201 Sewer Service Area. However, the property does not currently have a sewer connection.

1) Plant Capacity: Based on the Future Land Use (FLU) designation and proposal for 3 dwelling units, the maximum anticipated additional flow associated with 3 equivalent units (EQUs) is about 500 gallons per day. The Persigo wastewater treatment plant has sufficient capacity to accommodate this development. The current capacity of the wastewater treatment plant is 12,500,000 gallons per day. The plant currently only receives approximately 8 million gallons per day. Therefore, the plant has ample capacity to accommodate this additional flow. The property would be assessed the current plant investment fee (PIF) of $4,776 per equivalent unit (2019 rate) or $14,328. This fee is intended to pay the equivalent share of the payments due on bonds for the existing wastewater treatment plant and infrastructure.

2) Ability to Serve Area: An 8-inch sewer main is located along Arlington Drive so the property would have direct access for sewer taps. There is available capacity in this sewer collection system to accommodate future development of this property with 3 dwelling units.

3) Sewer Service Charges: Monthly sewer service rates for single family units are $22.40. These rates have been determined sufficient to cover the cost of service.

SUGGESTED MOTION:

I move to adopt Resolution No. 12-19, a resolution referring a petition to the City Council for the annexation of lands to the City of Grand Junction, Colorado, setting a hearing on such annexation, and exercising Land Use Control, Arlington Annexation, a serial annexation comprising Arlington Annexation No. 1 and Arlington Annexation No. 2, approximately 1.41 acres, located at 265 Arlington Drive, and introduce an ordinance annexing territory to the City of Grand Junction, Colorado, Arlington Annexation, a serial annexation comprising Arlington Annexation No. 1 and Arlington Annexation No. 2, approximately 1.41 acres located at 265 Arlington Drive and set a public hearing for April 3, 2019.

NOTICE OF HEARING
ON PROPOSED ANNEXATION OF LANDS
TO THE CITY OF GRAND JUNCTION, COLORADO

NOTICE IS HEREBY GIVEN that at a regular meeting of the City Council of the City of Grand Junction, Colorado, held on the 20th day of February 2019, the following Resolution was adopted:

CITY OF GRAND JUNCTION, COLORADO

RESOLUTION NO. ____

A RESOLUTION
REFERRING A PETITION TO THE CITY COUNCIL
FOR THE ANNEXATION OF LANDS
TO THE CITY OF GRAND JUNCTION, COLORADO,
SETTING A HEARING ON SUCH ANNEXATION,
AND EXERCISING LAND USE CONTROL

ARLINGTON ANNEXATION
A SERIAL ANNEXATION COMPRISING ARLINGTON ANNEXATION NO. 1 AND ARLINGTON ANNEXATION NO. 2

APPROXIMATELY 1.41 ACRES LOCATED AT 265 ARLINGTON DRIVE

WHEREAS, on the 20th day of February 2019, a petition was referred to the City Council of the City of Grand Junction, Colorado, for annexation to said City of the following property situate in Mesa County, Colorado, and described as follows:

ARLINGTON ANNEXATION NO. 1

A certain parcel of land lying in the Southeast Quarter of the Northwest Quarter (SE 1/4 NW 1/4) of Section 30, Township 1 South, Range 1 East of the Ute Principal Meridian, County of Mesa, State of Colorado and being more particularly described as follows:

COMMENCING at the Northwest corner of the SE 1/4 NW 1/4 of said Section 30 and assuming the West line of the SE 1/4 NW 1/4 of said Section 30 bears S 00º34'42" E with all other bearings contained herein being relative thereto; thence from said Point of Commencement, S 00º34'42" E, along said West line, a distance of 258.79 feet to the POINT OF BEGINNING; thence from said Point of Beginning, N 89º25'18" E, a distance of 93.19 feet; thence S 00º34'44" E, a distance of 199.42 feet to a point being the beginning of a 20.00 foot radius curve, concave South, whose long chord bears S 88º32'13" W with a long chord length of 37.60 feet; thence Westerly along the arc of said curve, thru a central angle of 140º04'24", an arc length of 48.89 feet; thence S 89º25'18" W, a distance of 55.60 feet, more or less, to a point on the West line of the SE 1/4 NW 1/4 of said Section 30; thence N 00º34'42" W, along said West line, a distance of 200.00 feet, more or less, to the Point of Beginning.

CONTAINING 18,267 Square Feet or 0.419 Acres, more or less, as described.

ARLINGTON ANNEXATION NO. 2

A certain parcel of land lying in the Southeast Quarter of the Northwest Quarter (SE 1/4 NW 1/4) of Section 30, Township 1 South, Range 1 East of the Ute Principal Meridian, County of Mesa, State of Colorado and being more particularly described as follows:

BEGINNING at the Northwest corner of the SE 1/4 NW 1/4 of said Section 30 and assuming the West line of the SE 1/4 NW 1/4 of said Section 30 bears S 00º34'42" E with all other bearings contained herein being relative thereto; thence from said Point of Beginning, S 89º58'23" E, along the North line of the SE 1/4 NW 1/4 of said Section 30, a distance of 151.01 feet to a point on the East right of way for Arlington Drive, as same is recorded in Plat Book 12, Page 151, Public Records of Mesa County, Colorado; thence S 00º08'25" W, along said East right of way, a distance of 76.46 feet to a point being the beginning of a 808.89 foot radius curve, concave West, whose long chord bears S 07º55'09" W with a long chord length of 218.97 feet; thence Southerly along the arc of said curve, thru a central angle of 15º33'28", an arc length of 219.64 feet to a point being the beginning of a 20.00 foot radius curve, concave Northeast, whose long chord bears S 30º04'36" E, with a long chord length of 28.66 feet; thence Southeasterly along the arc of said curve, thru a central angle of 91º32'58", an arc length of 31.96 feet; thence S 04º05'57" W, a distance of 101.56 feet, more or less, to a point on the South right of way for Oxford Avenue, as same is recorded in Plat Book 12, Page 151, Public Records of Mesa County, Colorado, being the beginning of a 20.00 foot radius curve, concave Southeast, whose long chord bears S 41º46'38" W, with a long chord length of 35.44 feet; thence Southwesterly along the arc of said curve, thru a central angle of 124º44'35", an arc length of 43.54 feet; thence S 29º15'54" W, a distance of 12.96 feet; thence N 00º34'44" W, a distance of 199.42 feet; thence S 89º25'18" W, a distance of 93.19 feet, more or less, to a point on the West line of the SE 1/4 NW 1/4 of said Section 30; thence N 00º34'42" W, along said West line, a distance of 258.79 feet, more or less, to the Point of Beginning.

CONTAINING 42,773 Square Feet or 0.982 Acres, more or less, as described.

WHEREAS, the Council has found and determined that the petition complies substantially with the provisions of the Municipal Annexation Act and a hearing should be held to determine whether or not the lands should be annexed to the City by Ordinance;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION:

1. That a hearing will be held on the 3rd day of April, 2019, in the City Hall auditorium, located at 250 North 5th Street, City of Grand Junction, Colorado, at 6:00 PM to determine whether one-sixth of the perimeter of the area proposed to be annexed is contiguous with the City; whether a community of interest exists between the territory and the city; whether the territory proposed to be annexed is urban or will be urbanized in the near future; whether the territory is integrated or is capable of being integrated with said City; whether any land in single ownership has been

divided by the proposed annexation without the consent of the landowner; whether any land held in identical ownership comprising more than twenty acres which, together with the buildings and improvements thereon, has an assessed valuation in excess of two hundred thousand dollars is included without the landowner's consent; whether any of the land is now subject to other annexation proceedings; and whether an election is required under the Municipal Annexation Act of 1965.

2. Pursuant to the State's Annexation Act, the City Council determines that the City may now, and hereby does, exercise jurisdiction over land use issues in the said territory. Requests for building permits, subdivision approvals and zoning approvals shall, as of this date, be submitted to the Community Development Department of the City.

ADOPTED the _____ day of _____, 2019.

_____
President of the Council

Attest:

_____
City Clerk

NOTICE IS FURTHER GIVEN that a hearing will be held in accordance with the Resolution on the date and at the time and place set forth in the Resolution.

AN ORDINANCE ANNEXING TERRITORY TO THE CITY OF GRAND JUNCTION, COLORADO

ARLINGTON ANNEXATION
A SERIAL ANNEXATION COMPRISING ARLINGTON ANNEXATION NO. 1 AND ARLINGTON ANNEXATION NO. 2

APPROXIMATELY 1.41 ACRES LOCATED AT 265 ARLINGTON DRIVE

WHEREAS, on the 20th day of February 2019, the City Council of the City of Grand Junction considered a petition for the annexation of the following described territory to the City of Grand Junction; and

WHEREAS, a hearing on the petition was duly held after proper notice on the 3rd day of April 2019; and

WHEREAS, the City Council determined that said territory was eligible for annexation and that no election was necessary to determine whether such territory should be annexed;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION, COLORADO:

That the property situate in Mesa County, Colorado, and described to wit:

ARLINGTON ANNEXATION NO. 1

A certain parcel of land lying in the Southeast Quarter of the Northwest Quarter (SE 1/4 NW 1/4) of Section 30, Township 1 South, Range 1 East of the Ute Principal Meridian, County of Mesa, State of Colorado and being more particularly described as follows:

COMMENCING at the Northwest corner of the SE 1/4 NW 1/4 of said Section 30 and assuming the West line of the SE 1/4 NW 1/4 of said Section 30 bears S 00º34'42" E with all other bearings contained herein being relative thereto; thence from said Point of Commencement, S 00º34'42" E, along said West line, a distance of 258.79 feet to the POINT OF BEGINNING; thence from said Point of Beginning, N 89º25'18" E, a distance of 93.19 feet; thence S 00º34'44" E, a distance of 199.42 feet to a point being the beginning of a 20.00 foot radius curve, concave South, whose long chord bears S 88º32'13" W with a long chord length of 37.60 feet; thence Westerly along the arc of said curve, thru a central angle of 140º04'24", an arc length of 48.89 feet; thence S 89º25'18" W, a distance of 55.60 feet, more or less, to a point on the West line of the SE

1/4 NW 1/4 of said Section 30; thence N 00º34’42” W, along said West line, a distance of 200.00 feet, more or less, to the Point of Beginning.

CONTAINING 18,267 Square Feet or 0.419 Acres, more or less, as described.

ARLINGTON ANNEXATION NO. 2

A certain parcel of land lying in the Southeast Quarter of the Northwest Quarter (SE 1/4 NW 1/4) of Section 30, Township 1 South, Range 1 East of the Ute Principal Meridian, County of Mesa, State of Colorado and being more particularly described as follows:

BEGINNING at the Northwest corner of the SE 1/4 NW 1/4 of said Section 30 and assuming the West line of the SE 1/4 NW 1/4 of said Section 30 bears S 00º34’42” E with all other bearings contained herein being relative thereto; thence from said Point of Beginning, S 89º58’23” E, along the North line of the SE 1/4 NW 1/4 of said Section 30, a distance of 151.01 feet to a point on the East right of way for Arlington Drive, as same is recorded in Plat Book 12, Page 151, Public Records of Mesa County, Colorado; thence S 00º08’25” W, along said East right of way, a distance of 76.46 feet to a point being the beginning of a 808.89 foot radius curve, concave West, whose long chord bears S 07º55’09” W with a long chord length of 218.97 feet; thence Southerly along the arc of said curve, thru a central angle of 15º33’28”, an arc length of 219.64 feet to a point being the beginning of a 20.00 foot radius curve, concave Northeast, whose long chord bears S 30º04’36” E, with a long chord length of 28.66 feet; thence Southeasterly along the arc of said curve, thru a central angle of 91º32’58”, an arc length of 31.96 feet; thence S 04º05’57” W, a distance of 101.56 feet, more or less, to a point on the South right of way for Oxford Avenue, as same is recorded in Plat Book 12, Page 151, Public Records of Mesa County, Colorado, being the beginning of a 20.00 foot radius curve, concave Southeast, whose long chord bears S 41º46’38” W, with a long chord length of 35.44 feet; thence Southwesterly along the arc of said curve, thru a central angle of 124º44’35”, an arc length of 43.54 feet; thence S 29º15’54” W, a distance of 12.96 feet; thence N 00º34’44” W, a distance of 199.42 feet; thence S 89º25’18” W, a distance of 93.19 feet, more or less, to a point on the West line of the SE 1/4 NW 1/4 of said Section 30; thence N 00º34’42” W, along said West line, a distance of 258.79 feet, more or less, to the Point of Beginning.

CONTAINING 42,773 Square Feet or 0.982 Acres, more or less, as described.

be and is hereby annexed to the City of Grand Junction, Colorado.

INTRODUCED on first reading on the 20th day of February 2019 and ordered published in pamphlet form.

Information

SUBJECT:

Continue the South Twenty Annexation request until the March 6, 2019 City Council Meeting

RECOMMENDATION:

City Staff recommends continuing the public hearing for the South Twenty Annexation, Located at 2335 H Road, until the March 6, 2019 City Council meeting.

EXECUTIVE SUMMARY:

On January 16, 2019, City Council introduced a proposed Annexation Ordinance for the South Twenty Annexation, Located at 2335 H Road and Set a Public Hearing for February 20, 2019. However, City Council at their February 6, 2019 meeting remanded the Zone of Annexation item back to Planning Commission to rehear the item and to provide a new recommendation to City Council in the form of a successful motion. Therefore, due to this delay in hearing the Zone of Annexation request, City Staff is requesting that City Council continue the Annexation Ordinance public hearing originally scheduled for February 20th until the March 6, 2019 meeting so that both the Zone of Annexation Ordinance and Annexation Ordinance can be heard together at the same meeting.

BACKGROUND OR DETAILED INFORMATION:

N/A

FISCAL IMPACT:

SUBJECT:

Contract to Provide Dump Trucks and Drivers for Spring Cleanup 2019

RECOMMENDATION:

Authorize the Purchasing Division to enter into a contract with Colorado West Contracting, Inc. to provide sixteen dump trucks with drivers for the duration of the two weeks for the City Spring Cleanup Program, for an estimated amount of $117,760.

EXECUTIVE SUMMARY:

This request is for the award of a contract for the rental of 16 dump trucks with drivers to haul debris and refuse to designated collection sites as part of the City's Annual Spring Cleanup Program for 2019.

BACKGROUND OR DETAILED INFORMATION:

Each year the City's Streets Division conducts its Annual City Spring Cleanup Program. The Cleanup program provides hauling and disposal of debris and refuse that citizens wish to dispose of, at no cost to the citizens. The renting of dump trucks with drivers is required to complete the two week cleanup, which runs from April 8, 2019 – April 20, 2019 (with the 1st week being dedicated to the north half of the City and the 2nd week being dedicated to the south half of the City). It is estimated the City will need each truck and driver 80 hours over the two week period for an estimated grand total of 1,280 hours.

A formal Invitation for Bids was issued via BidNet (an on-line site for government

agencies to post solicitations), posted on the City's Purchasing website, sent to the Grand Junction Chamber of Commerce and the Western Colorado Contractors Association, and advertised in The Daily Sentinel. While the amount bid is within the City Manager's purchasing authority, since there was only one bid, City Council approval is required per City Purchasing Policy. One company submitted a formal bid, which was found to be responsive and responsible in the following amount:

FIRM	LOCATION	COST
Colorado West Contracting, Inc.	***Grand Junction, CO***	***$117,760 ($92/hr)***

FISCAL IMPACT:

Budget is $270,180

The estimated expenditures for the Spring Cleanup program is as follows:

Dump Trucks and Drivers (This Action)	**$117,760**
Roll Off Containers	$ 62,000
Skid Steers Loaders	$ 33,180
Landfill Charges	$ 64,356
Total	$ 277,286

SUGGESTED MOTION:

I move to authorize the Purchasing Division to enter into a contract with Colorado West Contracting, Inc. to provide sixteen dump trucks with drivers for the duration of the two weeks for the City Spring Cleanup Program, for $92.00 per hour, an estimated amount of $117,760.

SUBJECT:

A Resolution Vacating a Public Utility Easement on Property Located at 2626 Cottonwood Drive

RECOMMENDATION:

Planning Commission recommended approval of the public utility easement vacation request at its January 22, 2019 meeting.

EXECUTIVE SUMMARY:

The Applicant, Muddy Gap, LLC is requesting the vacation of a public utility easement on the property located at 2626 Cottonwood Drive. There is currently a 15-foot utility easement near the north end of the subject property. Said easement contains no equipment per Grand Valley Power, and there are no objections from the utility providers to vacate the easement.

BACKGROUND OR DETAILED INFORMATION:

BACKGROUND:
The Applicant of the subject property is Muddy Gap, LLC. The property, located at 2626 Cottonwood Drive, is a vacant residential lot platted in the North Rolling Acres subdivision in 1955. The Applicant plans to construct a single family residence and detached shop building on the site. In the planning process, the Applicant discovered there is a 15-foot utility easement that extends east to west in the northern portion of the property (as shown in Attachment #1 at the end of this report). There is no utility equipment in the easement, as confirmed by Grand Valley Power. In addition, Xcel Energy, CenturyLink, and Ute Water have no objection to the utility easement

vacation. As such, the Applicant of the property would like to vacate the easement, as it hinders the development potential of the site.

NOTIFICATION REQUIREMENTS:
Notice was completed consistent with the provisions in Section 21.02.080 (g) of the City's Zoning and Development Code. Mailed notice of the application submittal in the form of notification cards was sent to surrounding property owners within 500 feet of the subject property on January 11, 2019 and the subject property was posted with an application sign on October 31, 2018. The notice of this public hearing was published January 15, 2019 in the Grand Junction Daily Sentinel.

ANALYSIS
Pursuant to Section 21.02.100 of the Zoning and Development Code, the vacation of the utility easement shall conform to the following:

a. The Comprehensive Plan, Grand Valley Circulation Plan, and other adopted plans and policies of the City.

The proposed public utility easement vacation is addressed by the following Goal of the Comprehensive Plan.

Goal 11: Public facilities and services for our citizens will be a priority in planning for growth.

Vacation of this utility easement will have no impact on public facilities or services provided to the general public. Staff therefore finds this request conforms with this criterion.

b. No parcel shall be landlocked as a result of the vacation.

The request to vacate the public utility easement will not render any parcel landlocked. Therefore, staff finds the vacation request meets with this criterion.

c. Access to any parcel shall not be restricted to the point where access is unreasonable, economically prohibitive or reduces or devalues any property affected by the proposed vacation.

No access to any parcel will be restricted by the vacation of this public utility easement. Staff finds this criterion has been met.

d. There shall be no adverse impacts on the health, safety, and/or welfare of the general community and the quality of public facilities and services provided to any parcel of land shall not be reduced (e.g. police/fire protection and utility services).

There is currently no equipment in the utility easement that is being requested to be vacated. Grand Valley Power recently moved power lines near the subject property, and have no plans to utilize the easement in the future. In addition, the application was reviewed by all potentially-affected utilities and there were no concerns raised with the vacation request. As such, staff has found there will be no adverse impacts to the community and no impacts on the public facilities and services that serve this or any adjacent parcel of land and therefore has found this request conforms with this criterion.

e. The provision of adequate public facilities and services shall not be inhibited to any property as required in Chapter 21.06 of the Grand Junction Municipal Code.

Adequate public facilities and services exist for these properties without the need for this public utility easement, as no utilities are located within the easement. No facilities and services will be impacted or inhibited by this request. Staff has therefore found this request to conform with this criterion.

f. The proposal shall provide benefits to the City such as reduced maintenance requirements, improved traffic circulation, etc.

Vacation of this easement will provide benefit to the City by removing an unnecessary encumbrance on the property and allow the area to be used for development of the new use on the property (residential development). Staff finds this request conforms with this criterion.

FISCAL IMPACT:

This land use action does not have a fiscal impact to the City of Grand Junction.

SUGGESTED MOTION:

I move to adopt Resolution No. 13-19, a resolution vacating a utilities easement on property located at 2626 Cottonwood Drive.

CITY OF GRAND JUNCTION, COLORADO

RESOLUTION NO. _____

A RESOLUTION VACATING A UTILITIES EASEMENT ON PROPERTY LOCATED AT 2626 COTTONWOOD DRIVE

Recitals:

Muddy Gap, LLC is planning to construct a single-family residence and detached shop building on the lot located at 2626 Cottonwood Drive. There is currently a 15-foot utility easement near the north end of the subject property that has been in place since the original plat recording for North Rolling Hills subdivision in 1955. Said easement contains no equipment per Grand Valley Power, and there are no objections from utility providers to vacate the easement. Therefore, the east-west easement is no longer needed and can be vacated.

After public notice and public hearing as required by the Grand Junction Zoning and Development Code, and upon recommendation of approval by the Planning Commission, the Grand Junction City Council finds that the request to vacate the utility easement is consistent with the Comprehensive Plan and Section 21.02.100 of the Grand Junction Municipal Code.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT THE FOLLOWING DESCRIBED DEDICATED EASEMENT IS VACATED:

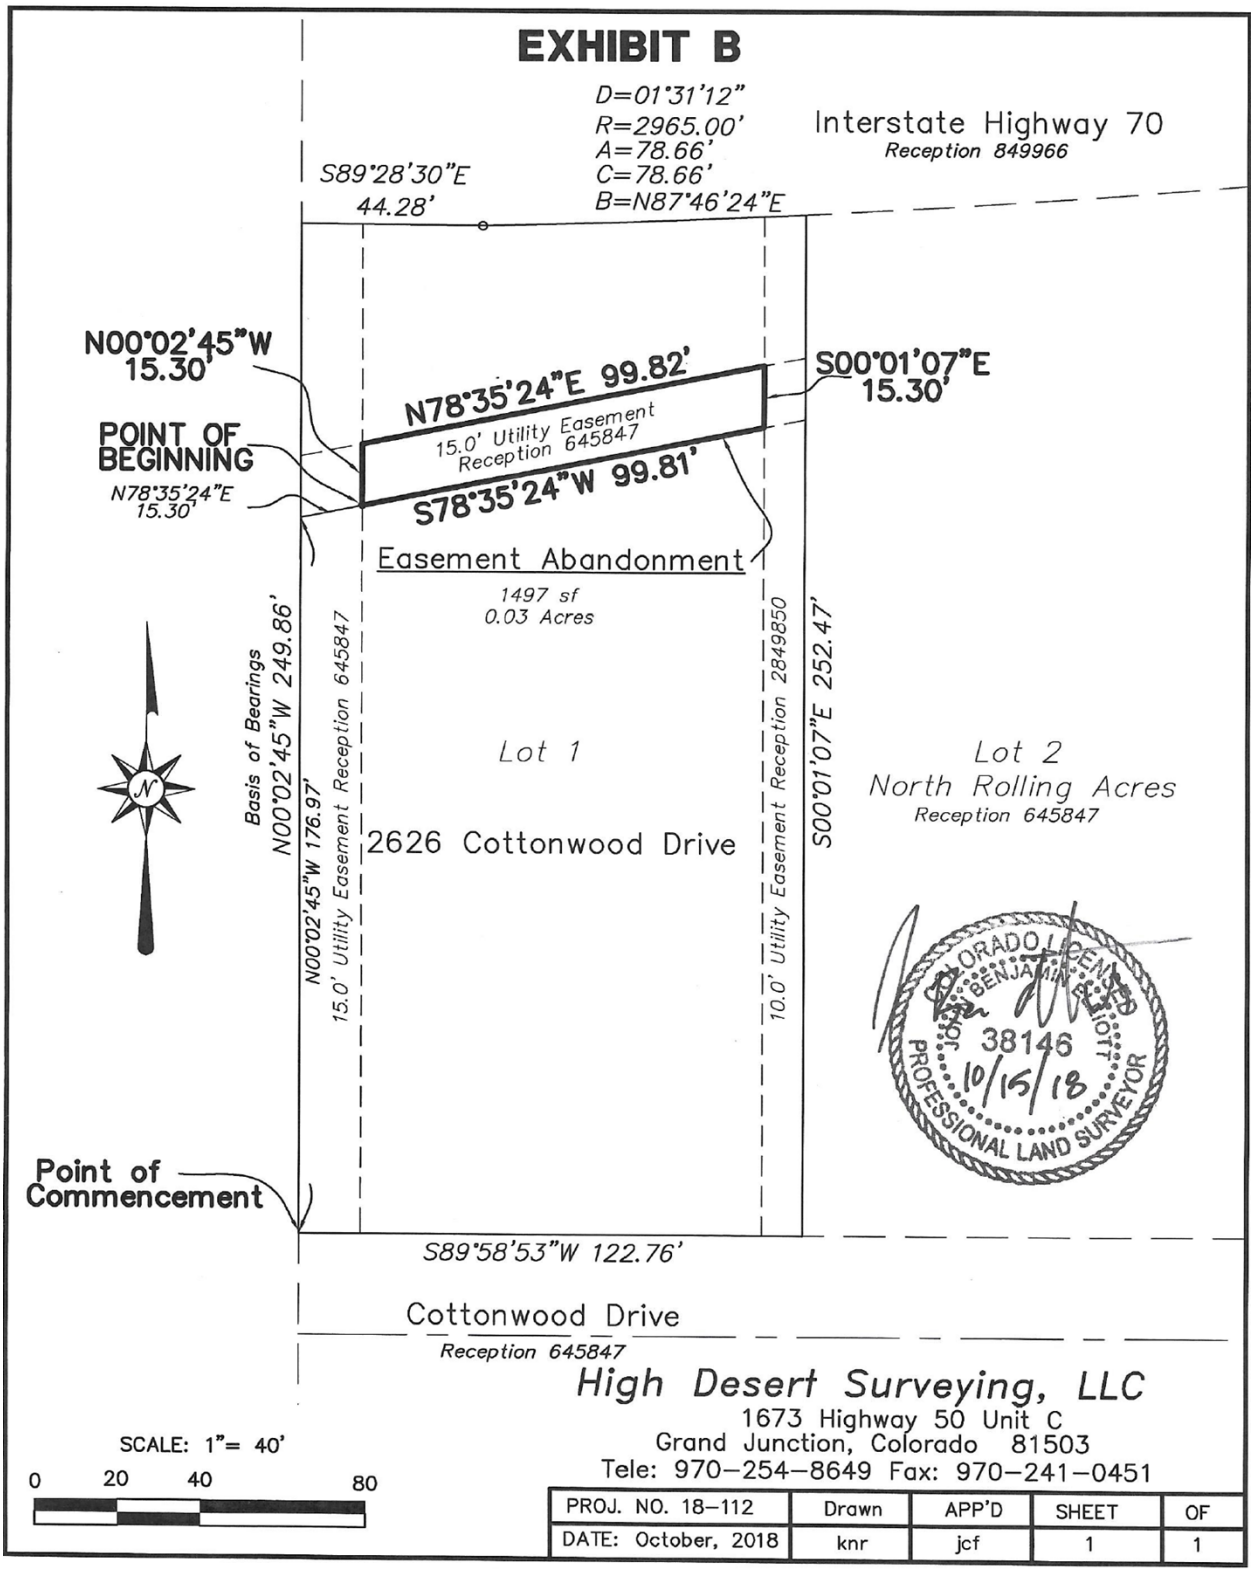
EXHIBIT A
Utility Easement Vacation

A parcel of land located in Lot 1, North Rolling Acres as shown on plat recorded in Reception Number 645847 of the Mesa County records and in the Southeast Quarter of the Northwest Quarter (SE¼ NW¼) of Section 35, Township 1 North, Range 1 West of the Ute Meridian, in Mesa County, Colorado and more particularly described as follows:

That 15 five foot wide (15.0') Utility Easement running East and West across the Northerly portion of Lot 1, North Rolling Acres, as shown on plat recorded in Reception Number 645847 of the Mesa County records and more particularly described as follows:

Commencing at the Southwest corner of said Lot 1, North Rolling Hills, whence the Northwest corner of said Lot 1 bears North 00°02'45" West, a distance of 249.86 feet for a basis of bearings, with all bearings contained herein relative thereto; thence North 00°02'45" West, a distance of 176.97 feet; thence North 78°35'24" East, a distance of 15.30 feet to the POINT OF BEGINNING; thence North 00°02'45" West, a distance of 15.30 feet; thence North 78°35'24" East, a distance of 99.82 feet; thence South 00°01'07" East, a distance of 15.30 feet; thence South 78°35'24" West, a distance of 99.81 feet to the POINT OF BEGINNING.

Said parcel containing an area of 1497 Square Feet, 0.03 Acres, as herein described.



And as depicted on “Exhibit B”.

Approved this 20th day of February, 2019.

Information

SUBJECT:

Consider a Request by GJ Ute LLC, to Accept the Dedication of 8.79-acres of Open Space in the Proposed Emerald Ridge Estates, Filing 1 Subdivision

RECOMMENDATION:

The Parks and Recreation Advisory Board at their February 7, 2019 meeting recommended approval of the request.

EXECUTIVE SUMMARY:

The Applicant, GJ Ute LLC, proposes the City accept dedication of 8.79-acres of open space that is located within and adjacent to Leach Creek within the proposed Emerald Ridge Estates, Filing 1 subdivision (proposed Tract A) located between 26 and 26 ½ Roads and south of H ¾ Road. The property currently has no physical address. The proposed open space is part of the Leach Creek drainage and will provide for a continuation of an east/west off-street trail connection between 26 and 26 ½ Roads for interconnectivity between subdivisions and neighborhoods. The proposed trail connection is identified on the adopted Active Transportation Corridor Circulation Plan.

BACKGROUND OR DETAILED INFORMATION:

A Preliminary Plan for 186 single-family detached lots is currently being reviewed for Emerald Ridge Estates to be constructed within two filings on 90.09 acres in an existing R-2 (Residential – 2 du/ac) zoning district.Phase I is proposed to consist of 98 single-family detached residential lots.

Section 21.06.020 (b) (1) of the Zoning and Development Code states: *"the owner of*

any residential development of 10 or more lots or dwelling units shall dedicate 10% of the gross acreage of the property or the equivalent of 10% of the value of the property. The decision as to whether to accept money or land as required by this section shall be made by the Director." Further, subsection (4) states:"…*The City Council may accept the dedication of land in lieu of payment so long as the fair market value of the land dedicated to the City is not less than 10% of the value of the property."*

As part of the residential development for Filing 1, the Applicant is proposing to provide a tract (Tract A, 8.79-acres) for the area that encompasses Leach Creek drainage, which a portion of traverses the Applicant's property along the south eastern edge. As part of the subdivision's infrastructure improvements, the Applicant will be required to construct a 10-foot wide concrete trail that will connect with the existing 10-foot wide concrete trail located within the adjacent Freedom Heights subdivision to the south.The existing tract of land and trail located within Freedom Heights is presently owned and maintained by the City of Grand Junction and was dedicated and accepted as part of the review of the Freedom Heights Subdivision.

The Community Development Director requested input from the Parks Department, which is typically responsible for maintaining City-owned open space regarding the potential acceptance of open space to be owned and maintained by the City regarding the request to dedicate this tract of land to the City. The Parks and Recreation Advisory Board was asked to provide a recommendation as to whether the City should accept the dedication of open space and it recommended to do so at their February 7, 2019 meeting.

The Public Works Director has also expressed that significant drainage basins would better serve the public if they were in public ownership for purposes of drainage, stormwater management and general maintenance. The Public Works Director also recommends the City accept the open space dedication. Presently, this area of Leach Creek is private property, owned by the Applicant.

Since the proposed land dedication is less than the required 10% value of the property, the Applicant is proposing to do a payment in-lieu for the balance as outlined by the following;

If the City accepts the land dedication of proposed Tract A, the Applicant would owe the remaining $4,983.55 as part of the required 10% Open Space Fee. This in-lieu fee is calculated using the City's codified formula for open space in-lieu fee payment. For this property, the formula is as follows:

$2,050,000.00 appraised value of vacant land for the property resulting in a required 10% in-lieu fee of $205,000.

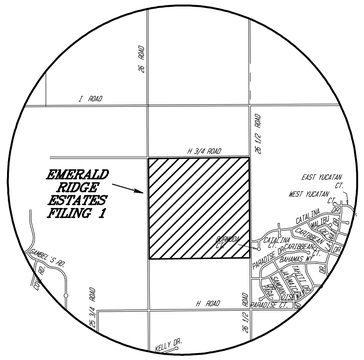
Value of Tract A (Leach Creek) = $200,016.45 ($22,755 per acre)

$205,000 (10% of appraised value) - $200,016.45 (value of Tract A) = $4,983.55 (remaining in-lieu payment).

FISCAL IMPACT:

In accordance with the Code, payment of a fee in lieu of open space dedication can be considered so long as the fee is at least 10 percent of the appraised value of the property (appraised as vacant land). The required open space fee for the proposed Emerald Ridge Estates property would be $205,000 (10% of the appraised land value of $2,050,000). However, based on the appraisal of $22,755.00 per acre, the value of the 8.79-acres of open space for proposed Tract A is $200,016.45, therefore, if the City Council accepts the open space dedication, the Applicant would still owe the remaining $4,983.55 to the City.

SUGGESTED MOTION:



I move to approve the request to accept the dedication of open space land in the Emerald Ridge Estates subdivision, proposed Tract A, 8.79-acres. The Applicant shall also make payment of the remaining $4,983.55 to the City of Grand Junction in compliance with the City's Open Space Dedication In-Lieu Fee.

DEDICATION

KNOW ALL MEN BY THESE PRESENTS:
That the undersigned, GJ UTE, LLC is the owner of that real property situate in the S 1/2 NW 1/4 and N 1/2 SW 1/4 of Section 26, Township 1 South, Range 1 West of the Ute Meridian, City of Grand Junction, Mesa County, Colorado; being more particularly described as follows:

Lot 1, Emerald Subdivision, recorded under Reception No. _____.

Said Owner has by these presents laid out, platted and subdivided the above-described real property into Lots as shown hereon, and designated the same as EMERALD RIDGE ESTATES FILING 1, in the City of Grand Junction, County of Mesa, State of Colorado, and does hereby offer the following dedications and grants:

All streets, roads and Rights-of-Way are dedicated to the City of Grand Junction for the use of the public forever.

All Multipurpose Easements are dedicated to the City of Grand Junction as perpetual easements for City approved utilities including the installation, operation, maintenance and repair of said utilities and appurtenances which may include but are not limited to, electric lines, cable TV lines, natural gas pipelines, sanitary sewer lines, storm sewers, water lines, telephone lines, traffic control facilities, street lighting, landscaping, trees and grade structures.

An easement over Tract E is dedicated to the City of Grand Junction as perpetual easements for the inspection, installation, operation, maintenance and repair of detention and drainage facilities and appurtenants thereto. The City of Grand Junction is dedicated reasonable ingress/egress access to the drainage/detention easement areas. The owner(s) and/or the property owner's association, if one exists, is not relieved of its responsibility to inspect, install, operate, maintain, and repair the detention and drainage facilities.

Tract A is dedicated to the City of Grand Junction as Open Space.

A perpetual easement over, on, along, under, through and across Tract H is granted to the City of Grand Junction for the benefit and use of the Persigo 201 Sewer System, its members, employees, agents, contractors and successors in interest, for the installation, operation, maintenance, repair and replacement of sanitary sewer and appurtenant facilities and for the conveyance of sewer waste.

All Irrigation Easements are granted to the Emerald Ridge Estates Homeowners Association Inc. by separate instrument.

Tracts B, C, D, E, F, G, H, I & J are granted to the Emerald Ridge Estates Homeowners Association Inc., by separate instrument.

A Multipurpose Easement over Tracts B, C, D & G is dedicated to the City of Grand Junction.

Owner further certifies that all lienholders, if any, are represented hereon.

PROJECT BENCHMARKS:

PROJECT BENCHMARK #1 IS A SURVEY MONUMENT LOCATED AT THE CENTER–NORTH 1/16 CORNER OF SECTION 26, T1N, R1W, UTE MERIDIAN ON 26.5 ROAD. MESA COUNTY SURVEY POINT # 201–1. ELEVATION, 4752.77, IS BASED ON THE MESA COUNTY SURVEY INFORMATION MANAGEMENT SYSTEM. PROJECT BENCHMARK #2 IS A SURVEY MONUMENT LOCATED AT THE NORTH 1/16 CORNER OF SECTION 26, T1N, R1W, UTE MERIDIAN ON 26.5 ROAD. ELEVATION, 4713.10.
BASIS OF BEARING BEING THE LINE BETWEEN THESE TWO POINTS, BEARING N89°52'41"E.

GENERAL NOTES

1. ALL CONSTRUCTION TO CONFORM TO THE CURRENT CITY OF GRAND JUNCTION DEPARTMENT OF PUBLIC WORKS AND PLANNING STANDARDS AND SPECIFICATIONS.
2. CONTRACTOR MUST CONTACT CITY OF GRAND JUNCTION TRAFFIC OPERATIONS SUPERVISOR PRIOR TO CONSTRUCTION OR PLACEMENT OF TRAFFIC CONTROL DEVICES/FEATURES (STRIPING, SIGNALS, MEDIANS, ETC.) FOR CONSTRUCTION IN THE RIGHT-OF-WAY ONLY.
3. GEOTECHNICAL INVESTIGATION PERFORMED BY LINCOLN DEVORE, INC. REFER TO REPORT DATED FEBRUARY 21, 2008 AND UPDATE SUPPLEMENT FROM GEOTECHNICAL ENGINEERING GROUP DATED AUGUST, 2018.
4. LIGHTING TO BE DESIGNED BY UTILITY PROVIDER. (GRAND VALLEY POWER)
5. ALL SANITARY SEWER MANHOLES ARE 48" I.D. UNLESS OTHERWISE INDICATED.FOR STREET SECTIONS SEE C4 SERIES SHEETS.
6. WATER MAIN PIPES ARE 8" C-900 PVC UNLESS OTHERWISE INDICATED.
7. SANITARY SEWER MAINS ARE 8" SDR 35 UNLESS OTHERWISE INDICATED.

Grand Junction City Council

Regular Session

Item #7.a.

Meeting Date: February 20, 2019

Presented By: Randi Kim, Utilities Director

Department: Public Works - Utilities

Submitted By: Randi Kim

Information

SUBJECT:

Agreement with Powderhorn Ski Company, LLC. to Lease Water for Snowmaking

RECOMMENDATION:

Adopt Resolution Authorizing an Agreement between Powderhorn Ski Company, LLC and the City of Grand Junction.

EXECUTIVE SUMMARY:

Powderhorn Ski Company, LLC, has requested to lease 140 acre feet of water from the City's Anderson Reservoir No. 2 for the purposes of snowmaking. The term of this Agreement is 40 years, subject to Powderhorn commencing work on required Improvements within 36 months of commencement.

BACKGROUND OR DETAILED INFORMATION:

Powderhorn Ski Company, LLC and the City of Grand Junction entered into an agreement on September 5, 2012 to lease 140 acre feet of water from the City's Somerville Reservoir for the purpose of snowmaking. The agreement required that Powderhorn design and construct Phase I Improvements, which included a pump station at Somerville Reservoir, approximately 13,000 lineal foot pipeline and distribution hydrants, snowmaking distribution line, and associated electrical service. Powderhorn did not commence Phase I Improvement within the agreed upon 72 months from the Commencement Date (September 5, 2018).

Powderhorn expressed interest in entering into a new agreement to lease water for the purpose of snowmaking. Powderhorn and City staff determined that a new alignment

of the pump station and pipeline that would convey water directly from Anderson Reservoir No. 2 would better serve the Powderhorn resort. The new alignment would also eliminate evaporative water losses associated with transferring water via a ditch from Anderson Reservoir No. 1 to Somerville Reservoir, which was the previous plan. The newly proposed pipeline alignment will coincide with the alignment for Powderhorn's proposed trail connector with the Palisade Plunge mountain bike trail, which is expected to result in construction cost savings and minimize environmental impact.

City staff employed a consultant to evaluate whether leasing 140 acre-feet of water on a non-interruptible basis would have an impact on the City's municipal water supply, especially during drought conditions. The consultant modeled this scenario and concluded that the City would still be able to maintain reservoir storage levels to meet the City's municipal water demands.

Powderhorn will be required to pay the cost of design, construction, installation, operation and maintenance of the necessary Improvements including the pump station, pipeline, electrical service, meter(s) and other means of drawing, conveying, consuming and as applicable storing the water.

The proposed project would support Powderhorn's capital improvement plans to enhance the resort's winter experience. The proposed project supports a regional recreational facility and will insure a diversity of recreational experiences to the greater Grand Valley community and our visitors.

FISCAL IMPACT:

The Powderhorn pump station and pipeline would be at the expense of Powderhorn Ski Company. Annual revenue to the Water Enterprise Fund from the lease of water would be at a rate of $168.56 per acre foot for up to 140 acre feet or $23,598.40 per year.

Annually, the cost of water would be adjusted by 50% of the Denver-Aurora-Lakewood CPI/U.

Powderhorn has the option of requesting water to be stored for use in a subsequent dry year. The storage rate is set at $60.00 per acre foot per year. The storage fee will be in addition to the delivery rate of $168.56 per acre foot.

SUGGESTED MOTION:

I move to adopt Resolution No. 14-19, a resolution authorizing an agreement between Powderhorn Ski Company, LLC and the City of Grand Junction for the lease of certain City water for snowmaking.

DiNatale WATER CONSULTANTS

MEMORANDUM

TO: Randi Kim and Mark Ritterbush (City of Grand Junction)

FROM: Matt Bliss, PE and Chris Newton (DiNatale Water Consultants)

SUBJECT: Update to Evaluation of Powderhorn Ski Area delivery contract

DATE: January 11, 2018 (update from December 14, 2018)

Per your email on October 29, 2018 and phone call on January 10, 2019, we evaluated the ability of Grand Junction (City) to supply water to the Powderhorn ski area (Powderhorn) for snowmaking.

As we understand it, the proposed agreement calls for up to 140 acre-feet (AF) of water to be made available to Powderhorn between October 15 and April 15 of each year on a non-interruptible basis. This water would be pumped from Anderson #1 Reservoir to Powderhorn. Powderhorn will notify the City by April 30 of each year of the amount of water that it will use in the upcoming year. You requested an evaluation to determine if the City could commit to this proposal and if not, under what conditions the City would take exception.

As discussed, we completed the development of the City's RiverWare water supply model of firm yield (model) prior to completing this evaluation. The City's model was developed to determine the amount of water that could be reliability delivered through historical drought conditions while maintaining approximately a year's supply of water in storage. The firm yield was presented as a range between 5,800 AF to 6,275 AF based on uncertainty in some model inputs, such as evaporation rates and inflow above City reservoirs.

We evaluated the effect of the proposed Powderhorn contract with two approaches:

1) Maintaining the 5,800 to 6,275 AF firm yield, adding the Powderhorn contract and evaluating the change in storage

2) Reducing the firm yield and increasing the winter drawdown target such that the storage reliability criteria were satisfied with the Powderhorn contract.

We evaluated these two approaches using the high and average range of evaporation rates used in the firm yield modeling. The high evaporation rate model runs result in evaporation of approximately 1,200 AF of evaporative loss from the Upper Reservoirs, which is higher

than the approximately 1,000 AF observed in 2018. Note that under the high evaporation rate scenario, the Upper Reservoirs fell below 1,800 AF in some years in the baseline simulation, so results show a comparison of the storage amounts with and without the Powderhorn contract even when 1,800 AF was not maintained in Upper Reservoir storage.

Without the Powderhorn contract simulated, the model releases water from the City's Upper Reservoirs to a target of 2,000 AF by the end of October. In addition, one of the City's reliability criteria is that at least 1,800 AF is in storage at the City's Upper Reservoirs at all times. We implemented the Powderhorn contract by creating a new account in the models' Anderson Reservoir No. 1 and 2 reservoir object. On each July 1, the model moves 152 AF of water out of the City's account and into the Powderhorn account in model runs with the baseline evaporation rate, and 161 AF in model runs with the higher evaporation rate. We chose July because this is typically after the end of the runoff when there is this amount of water in storage. We chose to move 152 or 161 AF into the Powderhorn account so that the City could deliver the full 140 AF after evaporative losses were considered through the end of the delivery term, namely the following April. Once the water is moved into the Powderhorn account, it is not included in the Upper Reservoir storage totals for the firm yield reliability criteria, and the model will release water to target 2,000 AF of water in the City's Upper Reservoir accounts by the end of October and evaluates firm yield on 1,800 AF of water in the City's Upper Reservoir accounts.

Model Results

Four scenarios were evaluated to test the two approaches described above, each tested with average evaporation rates and high evaporation rates. **Table 1** summarizes the times and amounts the Powderhorn contract causes the storage levels to fall below the firm yield criteria target levels. **Table 1** indicates that the amount below the targets is typically the approximate magnitude of the amount of water supplied to Powderhorn. This amount is decreased in Scenarios 3 and 4 that have a firm yield reduced by 50 AF. Figures 1 through 4 show the results for the entire study period. The figures show that the results of the Powderhorn contract do not affect the firm yield reliability criteria in most years, but the effects of the Powderhorn contract are evident for several months during and immediately following a drought year. Table 1 also shows the minimum total water in storage (Juniata and Upper Reservoirs) for each scenario and this storage as a percent of the 2013 to 2017 City raw water demands of 5,660 AF.

Figures 1 and 2 show the results for Scenarios 1 and 2 that both maintain the baseline firm yield of 5,800 to 6,275 AF, then compare storage levels in model runs with and without the Powderhorn contract. Figure 1 shows the Scenario 1 model results with average evaporation rates (resulting in 6,275 AF firm yield in the baseline run), and Figure 2 shows the Scenario 2 results with high evaporation rates (resulting in 5,800 AF firm yield in the baseline run)

Figure 1 shows the storage at Juniata Reservoir and the Upper Reservoirs for the baseline model run with average evaporation rates and for the same model run with the Powderhorn contract (Scenario 1). As shown in Figure 1, the Powderhorn contract causes the storage level at Juniata Reservoir to fall below the 90% level after the spring runoff in 1978 and 2003. In addition, the Upper Reservoirs fall below the 1,800 AF mark in 1977, 1990, 2002 and 2012.

Figure 2 shows the storage at Juniata Reservoir and the Upper Reservoirs for the baseline model run with high evaporation rates and for the same model run with the Powderhorn contract (Scenario 2). As shown in Figure 2, the results are similar to discussed above for Scenario 1, but with a larger difference between the target storage level criteria and the simulated storage level. Note that the baseline high evaporation run does not maintain 1,800 AF of storage in the Upper Reservoirs through drought years.

Figures 3 and 4 show the results for Scenarios 3 and 4 that both reduce the baseline firm yield of 5,800 to 6,275 AF to 5,750 and 6,225, and also increase the October storage target in the Upper Reservoirs to 2,060 AF (from 2,000 AF in the baseline) then comparing storage levels in model runs with and without the Powderhorn contract. Figure 3 shows the model results with average evaporation rates, and Figure 4 shows the results with high evaporation rates.

Figure 3 shows the storage at Juniata Reservoir and the Upper Reservoirs for Scenario 3 that has 6,225 AF firm yield (reduced from 6,275 in the baseline), average evaporation rates, and the October storage target at the Upper Reservoirs increased to 2,060 AF (from 2,000 in the baseline) and for the same model run with the Powderhorn contract. As shown in Figure 3, the Juniata reliability criteria are satisfied both without and with the Powderhorn contract. However, the storage in the Upper Reservoirs is 94 AF lower than the baseline model (Scenario 1) in October of 1990, and 2002, which is about 10 AF below the 1,800 AF mark.

Figure 4 shows the storage at Juniata Reservoir and the Upper Reservoirs for Scenario 4 that has 6,225 AF firm yield (reduced from 6,275 in the baseline), high evaporation rates, and the October storage target at the Upper Reservoirs increased to 2,060 AF (from 2,000 in the baseline) and for the same model run with the Powderhorn contract. As shown in Figure 4, the Juniata reliability criteria are satisfied both without and with the Powderhorn contract. However, the storage in the Upper Reservoirs is about 100 AF lower than the baseline model with high evaporation (Scenario 2) in October of 1977, 1990, 2002, and 2012.

Conclusions

In most years, the delivery of water to Powderhorn does not impact the City's reliability criteria for storage in Juniata Reservoir and the Upper Reservoirs. In dry years, the contract

does result in lower storage levels that at times fall below the reliability criteria established through the firm yield modeling project. The difference in storage in these dry years is approximately the amount of the Powderhorn contract.

We evaluated scenarios that reduces the City's firm yield and modifies its Upper Reservoir operations (Scenarios 3 and 4). These scenarios maintain the reliability criteria for firm yield and shows that system firm yield falls by 50 AF and the Upper Reservoir target must be increased to 2,060 AF in October rather than 2,000 AF.

The change in storage between the with and without Powderhorn contract runs were similar for the high evaporation scenarios as compared to the average evaporation scenarios. The primary difference is that high evaporation scenarios have a lower system firm yield (5,800 AF as compared to 6,275 AF) and the Upper Reservoirs fall below 1,800 AF in the without Powderhorn contract model runs as well. As discussed as part of the larger firm yield modeling, this Upper Reservoir storage criteria may be better evaluated in the future using a total system storage criterion rather than a strict reliance on 1,800 AF in the Upper Reservoirs.

The difference in storage in the Upper Reservoirs of approximately 145 AF seen in scenarios 1 and 2 is a difference of 2% of the City's firm yield. A reduction of 50 AF in the system firm yield is a reduction of less than 1%. The City's current raw water demands are 5,660 AF (2013-2017 average), which is approximately 2.5% to 10% below the system firm yield.

Based on the above, the Powderhorn contract will reduce the City's storage levels below firm yield targets in dry years by approximately 145 AF. This effect is partially mitigated by the City's current demands that are less than the firm yield. Depending on the scenario, the minimum amount of water in storage through the study period is reduced from approximately 125% of current annual demand to 121% when the Powderhorn contract is implemented (120% to 116% in the higher evaporation scenarios). Water levels are restored to baseline conditions once a drought ends. Therefore, it is our opinion that addition of the Powderhorn contract results in low additional risk of water supply system failure. The contract will result in lower storage levels through droughts, but total storage levels should remain above a year's supply given the current City demands.

Table 1. Summary of Modeling Results.

			Juniata less than 90%		Upper Reservoirs less than 1800 AF				Total Storage	
			Jun-78	Apr-03	Oct-77	Oct-90	Oct-02	Oct-12	Minimum Total Storage	Minum Storage as % of 5,660 AF

RESOLUTION NO. __-19

A RESOLUTION AUTHORIZING AN AGREEMENT BETWEEN POWDERHORN SKI COMPANY, LLC AND THE CITY OF GRAND JUNCTION FOR THE LEASE OF CERTAIN CITY WATER FOR SNOWMAKING

RECITALS:

On February 20, 2019 the City Council considered a proposed agreement by and between the Powderhorn Ski Company, LLC and the City for the lease of certain City water to Powderhorn for snowmaking. The proposed lease supersedes a similar agreement from 2012 that was for a variety of reasons never carried out.

Powderhorn has recently announced that it has renewed interest in and will make significant investment in snowmaking for the Powderhorn resort. The City's water aggregation system on the slopes of Grand Mesa has sufficient capacity to lease up to 140 acre feet of water for Powderhorn's proposed use. City Utility Director Kim. Water Services Manager Ritterbush, City Manager Caton and City Attorney Shaver have negotiated with Powderhorn and have informally come to terms.

The negotiating team recommends approval of the agreement.

NOW, THEREFORE, BE IT RESOLVED THAT:

The City, by and through the City Council and the signature of its President, does hereby approve, authorize and ratify the terms, covenants, conditions, duties and obligations to be performed by the City and Powderhorn in accordance with the attached agreement and does direct that the City perform under and according to the terms of the agreement.

DATED this 20th day of February 2019.

City Clerk

Agreement

AGREEMENT BETWEEN THE CITY OF GRAND JUNCTION
AND POWDERHORN SKI COMPANY, LLC

This Agreement is made and entered into by and between the City of Grand Junction, hereinafter referred to as the "City" and Powderhorn Ski Company, LLC, hereinafter referred to as "Powderhorn." Collectively the City and Powderhorn may be referred to as the Parties.

A. PURPOSES:

1. Formalize the collaboration and agreement between the Parties for the use by Powderhorn of a maximum of 140, non-interruptible as that concept is defined herein, acre feet per year of the City's municipal water supply for snowmaking, which may be referred to as the Project.

2. Develop and implement a mechanism for continued communication and consultation between the Parties in the processes and practices of drawing and using the water for the Project for the purposes of and in accordance with this Agreement; and

3. The Parties desire to ensure an appropriate level of continued involvement by each party in Project planning and development and compensation to the City.

B. STATEMENT OF MUTUAL BENEFIT AND INTERESTS:

1. The Parties are committed to working together, not as legal partners or joint venturers but as collaborators, to develop the Project that will serve to draw, transport and apply the water, as established by this Agreement, to beneficial use.

2. The Parties recognize and agree that use/development decisions made by one party affect decisions by the other and that in order to accomplish the Purposes of this Agreement, each party will be presumed and reasonably required to act to benefit the other.

3. The Parties further recognize and agree that communication from one party to the other is key to the success of the Project.

C. POWDERHORN SHALL:

1. Use the water supplied pursuant to this Agreement for snowmaking at the Powderhorn ski area. When the approximate locations of the snowmaking equipment are identified, provide a map thereof to the City.

2. Design and construct a pump station, pipeline and other means of drawing and conveying the water from the Anderson Reservoir No. 2. The approximate location of the pump station and pipeline are shown on Attachment A.

3. Pay the cost of construction, installation, operation and maintenance of the necessary pump station, pipeline, electrical service, and other means of drawing, conveying, consuming and as applicable storing the water. Powderhorn shall purchase and pay the cost of installation of a meter(s) that meets City specifications; after installation and acceptance of the meter by the City, the meter shall be and become City property.

4. Powderhorn shall design, construct and install, or cause at its own expense the design, construction and installation of those on-site and off-site improvements necessary or required for the Project. The improvements are set forth in paragraph 6 below (the "Improvements"). The Parties stipulate and agree that the Improvements are not a complete or exhaustive list and shall be amended upon completion of final design.

5. The scope of this Project is such that the City may have to engage independent consultant(s) to adequately provide inspection services; Powderhorn agrees to pay such costs, in addition to all others for which Powderhorn is responsible hereunder; provided, however; inspection service(s) fees shall be reviewed and approved by Powderhorn prior to engagement of consultants. Consultant service(s) shall not start until agreement has been reached on the costs(s) of the

DRAFT

consultants. The City agrees that it will use consultant services only as reasonably necessary.

6. If Powderhorn desires to obtain the snowmaking water provided hereunder, Powderhorn shall commence work on the below described Improvements within 36 months from the execution date of this Agreement ("Commencement Date"). The deadline will be extended should Powderhorn be delayed by the U.S. Forest Service or other state or federal regulatory agencies by 12 months past the date of final regulatory approval.

    a. Pump station at Anderson Reservoir No. 2, including the connection and valving at the outlet pipe at the base of the dams.

    b. Supply line from Anderson Reservoir No. 2 to the top of chair #1, the Flattop Flyer.

    c. Electrical service from the Grand Valley underground power line running through the U.S. Forest Service managed property, in the same trench as the water line, to the Powderhorn Anderson Reservoir pump house.

    d. Snowmaking distribution line with hydrants from the top of chair #1 down Bill's Run to a connection on the lower mountain to the existing snowmaking system servicing Lower Bill's Run, Lower Peacemaker and the Easy Rider beginner area.

    e. Electrical operating power service along the Bill's Run distribution line including the Easy Rider trails in the beginner area.

7. If Powderhorn commences work on the above described Improvements within 36 months from the Commencement Date, Powderhorn shall complete these Improvements by the end of eighteen months from the Commencement Date; that date is known as the "Completion Date." This time period should account for adverse weather warning of an early winter and still allow enough time the next summer to complete the Project.

DRAFT

8. Reclaim/revegetate the City-provided temporary construction easement/material storage area upon completion of construction. The City, in consultation with Powderhorn, shall prepare the reclamation/ revegetation plan for Powderhorn's use.

9. At all times use good land stewardship practices, including dust mitigation, erosion control and noxious weed control, on City property that is used by Powderhorn.

10. Notify the City by May 30th of each year, in writing to the person and at the address shown herein, of the acre feet of water that it desires to be stored andit intends to purchase for the Project for the subsequent snowmaking season ("Storage Notice"). In order to ensure availability of water for the Project, Powderhorn may at its option request that the City annually hold up to 140 acre feet of water for Powderhorn's use and benefit.

11. Upon the City's receipt of Powderhorn's Storage Notice by May 30th of each year, the City agrees to store for Powderhorn's use in the subsequent snowmaking season, for a fee of $60.00 per acre foot per year, the amount of water designated by Powderhorn. Stored water, if any, shall be made available for Powderhorn's use for the subsequent snowmaking season as otherwise provided by this Agreement. Powderhorn's failure to notify and/or pay the City the storage fee, shall relieve the City from any obligations to store water for the Project as described in this paragraph.

12. Payments to the City for water stored in accordance with the Storage Notice (as provided in paragraph C-11-13) will be made with the Storage Notice or in any event by May 30th of each year for the amount of water designated by Powderhorn for the snowmaking season to which the Storage Notice pertains. The first payment shall be made in the year the pipeline and pump house are substantially complete and operational.

DRAFT

13. In addition to the storage fee, pay a per acre foot charge for each and every acre foot of water obtained from the Anderson Reservoirs. The charge per acre foot for the initial year (2019) of the contract will be $168.56. All payments to the City for water used for snowmaking will be made November 1st of each year for the amount of water utilized by Powderhorn. The first year's payment shall be made in the year the pipeline and pump house are substantially complete and operational. Flow meter(s) shall track the water taken from the Anderson Reservoirs to the nearest gallon.

    For each subsequent year, the charges to be paid by Powderhorn for the water obtained from the Anderson Reservoirs shall be adjusted each year by 50% of the Denver-Aurora-Lakewood CPI/U.

D. CITY SHALL:

1. Provide a use easement for the term of this Agreement for the pipe and a temporary construction easement/material storage area for construction staging/construction management ("Easement.") City will also provide a lay down area for construction of the pump house and pipeline which area will be returned to the City in a clean and seeded condition.

    To the extent possible, subject to U.S. Forest Service approval, Powderhorn will design and construct the Easement with the Powderhorn Plunge Connector mountain bike trail. Powderhorn agrees to, during construction and subsequent maintenance of the Easement and infrastructure therein, minimize environmental impact to the surrounding terrain.

2. The water for the Project shall be first made available by the City by October 15 and end on or before April 15 of each year.

3. Volume and dates of availability of water for the Project are assumed and agreed as follows: a) up to 140 acre feet as build out of the snowmaking system; b) build out is not anticipated for ten years; and c) at completion of the first phase of the snowmaking system on or

about November 2019, Powderhorn will require approximately 60 acre feet.

4. Prior to May 30th of each year, the City shall provide an annual reconciliation of the amount of water use paid for (the payment therefor in the previous November) with the actual amount of water consumed during the prior snowmaking season. Such reconciliation shall be made based on the City's flow meter data and will be provided to Powderhorn on or before May 1st of each year. If there is a 1,000 gallon or greater difference between the amount of water consumed by Powderhorn, with consumption determined at meter, and the amount of water paid for by Powderhorn in the previous November, the City will provide a credit for each 1,000 gallon difference against the payment for storage for the subsequent snowmaking season. In the event Powderhorn disputes the City data/reconciliation for any year Powderhorn's remedy shall be prospective in application: Powderhorn may, at its cost, retain a third party testing and verification of the City meter with the results of the testing being provided to the City in the same form as provided to Powderhorn. In the event of a greater than 1,000 gallon discrepancy between the City meter data and the third party verification, City will issue a credit for the difference.

E. BOTH PARTIES SHALL:

1. Cooperate in Project construction decision making especially when the decision(s) has or may have an impact on water quality. That cooperation shall be made and/or given in a manner consistent with the responsibilities and authorities assigned by this Agreement or other applicable law or policy.

2. Work together to achieve maximum benefits from available resources while safeguarding the City's water quantity and quality. Efficiency and effectiveness toward attaining that goal can be made by a reduction in the duplication of effort and working to attain better overall coordination of land and ecosystem management.

DRAFT

3. Make available, upon request, survey, topography and construction drawings and documentation.

4. During the non-snowmaking months, April 15 through October 15, the Parties may by separate agreement provide for the development of a "pumpback" to, if constructed, provide opportunity to pump water from Powderhorn back to the Anderson Reservoirs, for storage for snowmaking purposes. Any such pumpback would be credited against Powderhorn's non-interruptible reserve. The Parties have not had the opportunity to fully study the pumpback but believe it could benefit them by reducing the amount of water that would need to be reserved for Powderhorn during drought years. The City and Powderhorn agree that the pumpback concept will be studied further and if it is of economic benefit to both entities then this Agreement may be modified to provide a credit against the annual water consumption fee or other mutually agreeable consideration all as determined by separate agreement.

F. IT IS MUTUALLY UNDERSTOOD AND AGREED BY AND BETWEEN THE PARTIES TO:

1. COLORADO OPEN RECORDS ACT (CORA). Any information furnished to the City under or pursuant to this Agreement is subject to disclosure to others under or in accordance with the Open Records Act.

2. NON-EXCLUSIVE USE. This Agreement in no way limits or restricts the City from participating in similar water use projects or activities with other public or private agencies, organizations or persons.

3. COMMENCEMENT/EXPIRATION/TERMINATION. This Agreement takes effect upon the signature of Powderhorn and the City and shall remain in effect for forty (40) years from the date of execution. This Agreement may be extended or amended in writing with assent to the extension or amendment requiring the same approval/formality as was required at the inception of the agreement.

Termination of this Agreement shall occur only for and in the advent of a breach of a material term of this Agreement as the same is defined

herein. Each and every term and condition of sections C, D and E(1), (2) and (3) hereof shall be deemed to be a material term. In the event either party should fail or refuse to perform according to the terms of this Agreement, such party may be declared in default. If a default is declared, notice shall be given by the non-defaulting party to the defaulting party as provided in section 5. After a notice of default is given the defaulting party shall have a reasonable period of time to cure the default. The Parties stipulate and agree for a claimed default that does not credibly present an imminent life, health or safety hazard a reasonable cure period shall be not more than 6 months. In the event the default does credibly present an imminent life, health or safety hazard the cure period shall be as agreed upon by the Parties but in any event not more than 72 hours.

In the event of termination Powderhorn shall be allowed to remove its pump, pump house, pipeline and other Improvements and upon removal shall restore the City property to the condition it existed prior to installation.

4. RESPONSIBILITIES OF PARTIES. Powderhorn and the City and their respective officers, employees and agents shall be responsible for the administration of their activities and the utilization of their resources dedicated to the completion of the Project by and with the expenditure of their own funds. Each party shall carry out its separate activities in a coordinated and mutually beneficial manner.

5. PRINCIPAL CONTACTS. The principal contacts for this instrument are:

City of Grand Junction	Powderhorn
City Manager	General Manager
City of Grand Junction	Powderhorn Ski Co., LLC
250 N. 5th Street	P.O. Box 250
Grand Junction, Colorado 81501	Mesa, Colorado 81643
970-244-1508	970-331-8245

These shall be the persons contracted for purposes of any notice provided for in this Agreement.

6. NON-FUND OBLIGATING DOCUMENT. Nothing in this Agreement shall obligate the City to obligate, appropriate or transfer any funds. Specific work projects or activities that involve the transfer or expenditure of funds will require separate budget approval and be contingent upon the appropriation of funds.

7. AUTHORIZED REPRSENTATIVES. By signature below, the Parties certify that the signatories to the document are authorized to act in all matters related to, arising out of or under this Agreement.

8. ASSIGNABILITY. Powderhorn may assign the rights provided in this Agreement to any successor as owner and/or operator of Powderhorn with the understanding that the new owner or operator must abide by all terms and conditions of this Agreement. Powderhorn shall notify the City in writing of any assignment.

THE PARTIES HERETO have executed this instrument this _____ day of February 2019.

DRAFT

Grand Junction City Council

Regular Session

Item #8.a.i.

Meeting Date: February 20, 2019

Presented By: John Shaver, City Attorney

Department: City Attorney

Submitted By: Jamie B. Beard

Information

SUBJECT:

An Ordinance Amending the Municipal Code Regarding Possession or Consumption of Alcohol in Parks and Riverfront Trails, Changing the Hours of Prohibited Park Use, and Including Vaping and the Use of Vape Devices as Prohibited in Workplaces, Public Places, and for Use by Minors

RECOMMENDATION:

Staff recommends adoption of the ordinance.

EXECUTIVE SUMMARY:

In the interest of protecting the health, safety and welfare of citizens, staff has drafted the attached ordinance that proscribes certain activities that may be offensive, harmful or illegal by specifically limiting certain alcohol in certain public places, limiting secondhand exposure to the harmful chemicals created by smoking and the use of electronic smoking devices ("vaporizers" and/or e-cigarettes), and amending park hours.

BACKGROUND OR DETAILED INFORMATION:

Pursuant to Colorado Senate Bill 16-197, 3.2% beer will no longer be sold in Colorado after January 1, 2019. City ordinances currently prohibit consumption of malt, vinous and spirituous liquor alcohol in public places; however, fermented malt beverages (3.2% beer) may be possessed or consumed in public parks and other public places. In order to address the changes in Colorado law, this ordinance clarifies the types of alcohol that will be allowed or disallowed in certain places.

Vaping is a relatively new trend among minors and adults alike and serves as an alternative to smoking traditional cigarettes. Electronic smoking devices (including e-cigarettes) can deliver substances including nicotine, tobacco and marijuana. Studies have shown that e-cigarettes contain high levels of ultra-fine particles associated with respiratory and vascular ailments. In addition, vape substances can include toxic chemicals known to cause cancer. Although the U.S. Surgeon General has said that there is no safe level of secondhand smoke, the effects of secondhand vapor exposure is still unknown.

Vaping is common not only in public places like parks and sidewalks but in and around schools. Current ordinances regulate smoking in public and by minors but do not address vaping. School resource officers have expressed concern regarding enforcement of minors vaping in and around schools. Aside from the negative effects of vaping, much like smoking, it may be displeasing to others.

It has recently been reported by Grand Junction Parks and Recreation staff and law enforcement that there has been an increase in vandalism and damage to property in the City parks. As a result, City staff has reviewed park hours and recommended changes that may help decrease the vandalism.

FISCAL IMPACT:

None directly attributable to the ordinance/its adoption.

SUGGESTED MOTION:

I move to (adopt/deny) Ordinance No. 4832 - an ordinance to amend Chapter 12.04, Chapter 12.06, and Chapter 12.08 of the Grand Junction Municipal Code regarding possession or consumption of alcohol in parks and Riverfront Trails and to change the hours of prohibited park use and to amend Chapters 8.20 and 9.04 to include vaping and the use of vape devices as prohibited in workplaces, public places, and for use by minors on final passage and order final publication in pamphlet form.

Attachments

1. ORD-Smoking - alcohol - parks ordinance - final 121118 (1)

CITY OF GRAND JUNCTION, COLORADO

ORDINANCE NO. _____

AN ORDINANCE TO AMEND CHAPTER 12.04, CHAPTER 12.06, AND CHAPTER 12.08 OF THE GRAND JUNCTION MUNICIPAL CODE REGARDING POSSESSION OR CONSUMPTION OF ALCOHOL IN PARKS AND RIVERFRONT TRAILS AND TO CHANGE THE HOURS OF PROHIBITED PARK USE AND TO AMEND CHAPTERS 8.20 AND 9.04 TO INCLUDE VAPING AND THE USE OF VAPE DEVICES AS PROHIBITED IN WORKPLACES, PUBLIC PLACES, AND FOR USE BY MINORS

RECITALS:

This ordinance regarding possession or consumption of alcohol in parks and Riverfront Trails, to prohibit smoking, including marijuana, and vaping in public places and to amend park hours serves to protect the health, welfare and safety of citizens by proscribing certain activities that are or may be offensive, harmful or illegal. Specifically limiting secondhand exposure to the harmful chemicals created by smoking and the use of electronic smoking devices ("vaporizers" and/or e-cigarettes) as well as affirming that smoking of marijuana is illegal in public and that the public consumption of certain alcohol in certain public places is improper.

Concerning vaping, the U.S. Surgeon General has said there is no safe level of exposure to secondhand smoke and that even brief exposure can be harmful to health. Though much is still unknown about the effects of secondhand vapor exposure, the aerosol emitted by the user of an e-cigarette has been shown to contain high levels of ultra-fine particles associated with respiratory and vascular ailments, as well as toxic chemicals known to cause cancer. As well, vaping much like smoking, may be displeasing to others.

Pursuant to Colorado law (SB 16-197) 3.2% beer (also known as fermented malt beverages) will not be sold in Colorado after January 1, 2019. Current law prohibits public consumption of alcohol in public places; however, fermented malt beverages may by City rule be possessed/consumed in some public parks and places. In order to address the changes in the law, this ordinance addresses the types of alcohol that with passage of the ordinance will be allowed/disallowed.

In the course of preparing updates to the laws regarding smoking/vaping and alcohol in parks, the City staff reviewed park hours and has recommended changes to the same. The City parks have suffered from increased vandalism and it anticipated that modification of the hours parks are open may help to improve the problem.

NOW THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

Chapters 12.04, 12.08, 12.16, 8.20, 9.04, and 12.08 shall be revised as follows (additions are shown in **bold print** and deletions marked with ~~strike through~~ notations):

12.04.050 Drinking alcoholic beverages in parks; use of glass containers ~~in grassed areas~~ prohibited.

(a) It shall be unlawful for any person to possess or drink any spiritous liquors in the City in any park which is either publicly or privately owned and used by the public unless such possession and consumption is pursuant to and in accordance with a special events permit issued in accordance with C.R.S. 44-5-101 *et seq.* or such place is a part of the premises designated under a valid license issued pursuant to state law and the consumption is otherwise lawful; malt and/or vinous liquors may be consumed by persons of lawful age and other applicable law.

(b) It shall be unlawful for any person to possess or drink any malt, vinous, or spiritous liquors in Emerson Park and Hawthorne Park, which are owned by the City and used by the public, unless such possession and consumption is pursuant to and in accordance with a special events permit issued in accordance with C.R.S., 44-5-101 *et seq.* or such place is a part of the premises designated under a valid license issued pursuant to state law and the consumption is otherwise lawful.

(c) No person shall drink from or use glass containers ~~on the grassed areas of~~ in any park.

12.04.015 Hours classification system.

(a) The City Council of the City of Grand Junction hereby establishes the following classifications and hours of prohibited park use for each classification:

(1) ~~Midnight~~ **11:00 P.M.** – 5:00 A.M.: Community, regional and neighborhood parks with formal programmable sports facilities.

(2) ~~10:30~~ **10:00** P.M. – 5:00 A.M.: Neighborhood and mini parks.

(3) 10:00 P.M. – 5:00 A.M.: Open space and undeveloped parks and properties.

(4) 10:00 P.M. – 5:00 A.M.: Cemeteries.

(5) 10:00 P.M. – 5:00 A.M.: School IGA sites (except during school hours).

(b) The City Council of the City of Grand Junction hereby authorizes and directs the City Manager to classify each City park **pursuant to the classifications in section 12.04.015(a)(1-5)** at the time of acquisition, or development, when the principal use or function of the park changes, or as needed to address vandalism or similar operational concerns. The City Manager may defer any such classification decision to the City Council as he deems necessary.

(c) ~~The classification system attached to the ordinance codified in this section is hereby approved~~. The City Manager is hereby delegated the power and duty to amend the classification system as he deems necessary from time to time, by administrative regulation. The City Manager may defer any changes to the ~~attached~~ classification system to the City Council as he deems necessary.

(d) "Community," "regional," "neighborhood," "mini" parks are defined or distinguished by reference to the current City-adopted Parks Master Plan.

(e) All School IGA sites shall be closed to the public during school hours unless attendance is approved for the public at school related activities and/or activities approved by the Mesa County Valley School District that are held on the premises of such site(s).

~~(e)~~ **(f)** This section shall be in full force and effect upon its adoption; however, no criminal charges shall be issued or filed based on any changes from prior practices until adequate notice is posted on the park, open space, cemetery or other site.

12.16.100 Drinking of alcoholic beverages in public ways; use of glass containers ~~in grassed areas~~ prohibited.

(a) It shall be unlawful for any person to possess or drink any malt, vinous, or spirituous liquors in the City, in or on any public street, road, highway, ~~park~~ or public way which is either publicly or privately owned and used by the public, unless such possession and consumption is pursuant to and in accordance with a special events permit issued in accordance with C.R.S. § ~~12-48-101~~ **44-5-101** *et seq.* or such place is a part of the premises designated under a valid license issued pursuant to state law and the consumption is otherwise lawful.

(b) No person shall drink from or use glass containers when consuming alcohol in public places.

~~(b) No person shall drink from or use glass containers on the grassed areas of any park.~~

8.20.020 Smoking in workplaces and public places.

(a) Definitions. The following words and phrases, whenever used in this section, shall have the following meanings:

Bar means an area which is devoted to the serving of alcoholic beverages for consumption by guests on the premises and in which the serving of food is only incidental to the consumption of such beverages.

Bingo hall means any enclosed area used for the management, operation or conduct of a game of bingo by any organization holding a license to manage, operate or conduct games of bingo pursuant to Colorado law and in which food service for consumption on the premises is incidental to the games of bingo.

Bowling alley means a business open to the public which offers the use of bowling lanes, typically equipped with operable automatic pin setting apparatus and in which food service for consumption on the premises is incidental to bowling and related activities.

Business means any sole proprietorship, partnership, joint venture, corporation or other entity formed for profit-making or nonprofit purposes, including retail establishments where goods or services are sold, as well as professional corporations and limited liability companies. *Business* includes entities where legal, accounting, financial, planning, medical, dental, engineering, architectural or other services are delivered.

***Electronic smoking device* means an electric or battery-operated device, which can be used to deliver substances, including but not limited to, nicotine, tobacco, or marijuana, to the person using such device. Electronic smoking devices shall include, without limitation, electronic cigarettes, cigars, cigarillos, pipes, and hookahs.**

Employee means any person whether such person is referred to as an employee, contractor, independent contractor, volunteer or by any other designation who:

(1) Performs any type of work for benefit of another in consideration of direct or indirect wages or profit; or

(2) Provides uncompensated work or services to a business or nonprofit entity.

Employer means any person, partnership, association, corporation, or nonprofit entity that employs one or more persons.

Enclosed area means all space between a floor and ceiling within a structure or building which is closed in on all sides by solid walls, doors or windows which extend from the floor to the ceiling.

Indoor area means any enclosed area or portion thereof. The opening of windows or doors, or the temporary removed of wall panels, does not convert an indoor area to an outdoor area.

***Lighted* means to illuminate by electricity, battery or fire; to ignite by electricity, battery or fire; to burn by electricity, battery or fire; or to emit light by electricity, battery or fire.**

Marijuana (which may alternatively be spelled as "marihuana") shall have the same meaning as set forth in Article XVIII, Section 16 of the Colorado Constitution or as may be more fully defined in any applicable State law or regulation.

Person means a natural person or any entity or business recognized by law or formed to do business of any sort.

Place of employment means any indoor place and any public place or portion thereof under the control of an employer in which employees of the employer perform services for, or on behalf of, the employer.

Private club means any establishment which restricts admission to members of the club and their guests. See *Public place*.

Private function means any activity which is restricted to invited guests in a nonpublic setting and to which the general public is not invited.

Public meetings means any meeting open to the public pursuant to Part 4 of Article 6 of Title 24, C.R.S., or any other applicable law.

Public place means any area to which the public is invited or in which the public is permitted, including but not limited to banks, educational facilities, schools, health facilities, laundromats, parks, trails and public open space, public transportation facilities including bus stations and stops, taxis, shelters, airports, train stations, reception areas, restaurants, retail food production and marketing/grocery establishments, retail service establishments, retail stores, theaters and waiting rooms. A private club is considered a *public place* when functions are held at the club which are open to the general public and are not restricted to the members of the club. A private residence is not a *public place* except during times when it is being used as a child care, adult care or health care facility.

Restaurant means a business in which the principal business is the sale of food or meals prepared on-site, typically for consumption on-site. Examples of restaurants, without limitation, are coffee shops, cafeterias, sandwich stands, private or public school

or other cafeterias, and other eating establishments which give or offer food for sale to the public, guests, or employees, as well as kitchens in which food is prepared on the premises for serving elsewhere, including catering facilities.

Retail tobacco store means a business utilized primarily for the sale of tobacco and accessories and in which the sale of other products is incidental.

Service line means any indoor or outdoor line at which one or more persons are waiting for or receiving service of any kind, whether or not such service involves the exchange of money.

Smoke or *smoking* means **and includes, but is not limited to**:

1) the carrying or possession of a **smoking instrument** ~~a lighted cigarette, lighted cigar or lighted pipe of any kind, and includes lighting of a pipe, cigar, cigarette, tobacco, weed or other combustible plants~~ **in one's mouth for the purpose of inhaling or exhaling smoke or vapor or blowing smoke or vapor rings;**

2) **the placing of a lighted smoking instrument in an ashtray or other receptacle, and allowing smoke or vapor to diffuse in the air;**

3) **the possession, carrying or placing of a lighted smoking instrument in one's hands or any appendage or device and allowing smoke or vapor to diffuse in the air; or**

4) **the inhaling or exhaling of smoke or vapor from a lighted smoking instrument.**

***Smoking instrument* means an instrument of any kind which can be used to deliver substances, including but not limited to nicotine, tobacco, marijuana, or any other substance, or combination thereof, to the person using such instrument. Smoking instrument shall include, without limitation, cigarettes, cigars, cigarillos, pipes and hookahs. Smoking instrument shall specifically include electronic smoking devices.**

Smoke-free means that air in an enclosed area is free from smoke caused by smoking.

Sports arena means sports pavilions, gymnasiums, health spas, boxing arenas, swimming pools, roller and ice rinks, bowling alleys and other similar places where members of the general public assemble either to engage in physical exercise, participate in athletic competition, or witness sports events.

Structure is defined in the International Building Code, including the International Residential Code, ("IBC") as adopted by the City from time to time. The term *structure* includes the term *building*, also defined by the IBC.

Tobacco is defined in § 25-14-203(17), C.R.S.

Work area means an enclosed area in which one or more employees are routinely assigned and perform services for or on behalf of the employer.

(b) Application to City Property**.** All enclosed areas and motor vehicles that are owned or leased by the City shall be subject to the provisions of this section as though such areas and vehicles were public places.

(c) Prohibition of Smoking in Public Places and Indoor Areas.

(1) Except as provided herein, smoking shall be prohibited in all public places and indoor areas within the City, including, but not limited to, the following:

(i) Elevators.

(ii) Restrooms, lobbies, reception areas, hallways and any other common-use areas.

(iii) Buses, taxicabs, other means of public transit while operating within the City limits, and ticket, boarding and waiting areas of public transit systems including stops, bus benches, shelters and depots.

(iv) Service lines.

(v) Retail stores.

(vi) All areas available to and customarily used by the public in all businesses and nonprofit entities patronized by the public, including, but not limited to, professional and other offices, banks, and laundromats.

(vii) Restaurants and bars except that smoking is allowed in outdoor seating areas of restaurants and bars that are not enclosed and are not under a roof or a projection of a roof as defined by the IBC as a *roof assembly*, such as patios, and any person smoking is at least 15 feet from the front or main doorway.

(viii) Aquariums, galleries, libraries, museums and similar facilities.

(ix) Any structure primarily used for exhibiting any motion picture, stage, drama, lecture, musical recital or other similar performance.

(x) Sports arenas whether enclosed or outdoors.

(xi) Public meeting places.

(xii) Health care facilities including hospitals, clinics, therapists' offices and facilities, physical therapy facilities, doctors' offices, dentists' offices and the offices and facilities of other health care providers.

(xiii) Restrooms, lobbies, hallways, and other common areas in public and private buildings including but not limited to apartment buildings, condominiums, trailer parks, retirement facilities, nursing homes, and other multiple-unit residential facilities.

(xiv) Billiard or pool halls.

(xv) Polling places.

(xvi) Facilities in which games of chance are conducted, including but not limited to bingo halls.

(xvii) To the extent not otherwise provided in § 25-14-103.5, C.R.S., public and nonpublic schools.

(xviii) Other educational and vocational institutions.

(xix) Restrooms, lobbies, hallways, and other common areas in hotels and motels, and in at least 75 percent of the sleeping quarters within a hotel or motel that are rented to guests.

(xx) Any place of employment that is not exempted in subsection (f) of this section.

(xxi) The indoor area of a private club. Smoking is allowed in the outdoor areas of a private club, except where otherwise prohibited in this section.

(2) Notwithstanding any other provision of this section, any person or business who controls any business or facility may declare that entire establishment, facility or grounds as smoke-free.

(d) Smoke-Free Workplace**.** In the case of employers who own facilities otherwise exempted by subsection (f) of this section, each such employer shall provide a smoke-

free area for each employee requesting a smoke-free area. Every employee shall have the right to work in a smoke-free area.

(e) Smoke-Free Exits and Entrances**.** Smoking shall not occur in or so close to exterior exits or entrances that the free flow of pedestrian traffic may be affected or so close that the operation of the doors, exits or entrances is affected or diminished. No smoking shall occur within 15 feet of the front or main doorway leading into a building or facility.

(f) Where Indoor Smoking Is Not Prohibited.

(1) Notwithstanding any other provision of this section to the contrary, the following areas shall be exempt from the prohibition contained in subsection (c) of this section:

(i) Private homes and residences; except when used as a child care, adult day care or health care facility.

(ii) Retail tobacco stores.

(iii) Private vehicle, except if the private vehicle is being used for the public transportation of children or as part of health care or day care transportation.

(iv) A hotel or motel room rented to one or more guests if the total percentage of such hotel or motel rooms in such hotel or motel does not exceed 25 percent.

(v) A place of employment that is not open to the public and that is under the control of an employer that employs three or fewer employees.

(vi) A private, nonresidential building on a farm or ranch, as defined in § 39-1-102, C.R.S., that has annual gross income of less than $500,000.

(2) Notwithstanding any other provision of this section, any owner, operator, manager or other person who controls any establishment described in this subsection (f) may declare that entire establishment, facility, or grounds as smoke-free.

(g) Signs**.**

(1) Each owner, operator, manager and other person having control of an enclosed area or public place subject to the provisions hereof shall be jointly and severally responsible to clearly and conspicuously post:

(i) “No Smoking” signs or the international “No Smoking” symbol (consisting of a pictorial representation of a burning cigarette enclosed in a circle with a bar across it) in every public entrance or other areas where smoking is prohibited by this section.

(ii) In public places where smoking is allowed pursuant to this section, a sign with the words “Smoking is Allowed Inside” at each public entrance to, or in a position clearly visible on entering, the enclosed area in which smoking is permitted.

(2) All signs referred to in this subsection (g) shall be a minimum size of 20 square inches and must be placed at a height of between four and six feet above the floor.

(3) All signs at public parks or unenclosed public places shall be visible to persons entering from the primary entrance or shall be posted at reasonable intervals along the property boundary. The primary entrance shall be referred to as the location where a sign identifies the park name, hours it is open to the public and other rules and regulations. For purposes of this section, “reasonable intervals” shall be presumed to be no less than 300 feet.

(h) Optional Prohibitions**.** The owner or manager of any place not specifically listed in subsection (c) of this section, including a place otherwise exempted in subsection (f) of this section, may post signs prohibited smoking or providing smoking and nonsmoking areas. Such posting shall have the effect of including such place, or the designated nonsmoking portion thereof, in the places where smoking is prohibited pursuant to this section.

(i) No Retaliation**.** No person or employer shall discharge, refuse to hire or retaliate in any manner against any employee, applicant for employment, or customer because such employee, applicant, or customer exercises any right to, or complains about the lack of, a smoke-free environment afforded by this chapter.

(j) Violations and Penalties**.**

(1) It shall be unlawful for any person or business that owns, manages, operates or otherwise controls the use of any premises, enclosed area, public place, or place of employment subject to regulation under this section to fail to comply with any of its provisions.

(2) It shall be unlawful for any person to smoke in any area where smoking is prohibited by the provisions of this section.

(3) Each violation of any provision of this section shall be deemed to be a separate violation. Each day shall be treated as a separate violation for continuing violations of subsections (d), (g) and (i) of this section.

(k) Other Applicable Laws**.** This section shall not be interpreted or construed to permit smoking where it is otherwise restricted by other applicable laws.

(l) Severability**.** If any provision, clause, sentence or paragraph of this section or the application thereof to any person or circumstances shall be held invalid, such invalidity shall not affect the other provisions of this section which can be given effect without the invalid provision or application, and to this end the provisions of this section are declared to be severable.

9.04.210 Regulation of tobacco products.

(a) **Definitions.** For the purposes of this section, the following words or phrases shall have the meanings set forth.

(1) *Tobacco product* ~~means any substance containing tobacco leaf, including, but not limited to, cigarettes, cigars, pipe tobacco, snuff, chewing or dipping tobacco.~~ **shall include, but is not limited to, cigars, cigarillos, chewing tobacco, pipe tobacco, roll-your-own tobacco, snus, bidi, snuff, tobacco-containing shisha, and dissolvable tobacco product. Tobacco product shall also include electronic smoking devices that deliver substances to the user by turning liquid into vapor that is inhaled. Electronic smoking devices include but are not limited to electronic cigarettes, cigars, cigarillos, pipes, and hookahs.** This definition does not include any products that the Food and Drug Administration of the United States Department of Health and Human Services has approved as a tobacco use cessation product.

(2) *Smoking* means**, but is not limited to:** ~~the carrying or possession of a lighted cigarette, cigar, pipe, and includes lighting of the same.~~

a) the carrying or possession of a smoking instrument in one's mouth for the purpose of inhaling or exhaling smoke or vapor or blowing smoke or vapor rings:

(b) the placing of a lighted smoking instrument in an ashtray or other receptacle, and allowing smoke or vapor to diffuse in the air;

(c) the possession, carrying or placing of a lighted smoking instrument in one's hands or any appendage or device and allowing smoke or vapor to diffuse in the air; or

(d) the inhaling or exhaling of smoke or vapor from a lighted smoking instrument.

(3) *Self service display* means any retail tobacco display to which customers have direct physical access, including cigarette vending machines.

(4) *Minor* means any person under the age of 18.

(5) *Vending machine* means any mechanical, electric or electronic self-service device which, upon insertion of money, tokens or other form of payment, dispenses a tobacco product.

(6) *Smoking instrument* means an instrument of any kind which can be used to deliver substances, including but not limited to nicotine, tobacco, marijuana, or any other substance, or a combination thereof to the person using the instrument. Smoking instrument shall include, but not limited to, cigarettes, cigars, cigarillos, pipes and hookahs. Smoking instrument shall include electronic smoking devices.

(7) *Lighted* means to illuminate by electricity, battery, or fire; to ignite by electricity, batter or fire; to burn by electricity, battery or fire; or to emit light by electricity, battery or fire.

(8) *Electronic smoking device* means an electric or battery-operated device, which can be used to deliver substances, including but not limited to, nicotine, tobacco, or marijuana, to the person using such device. Electronic smoking devices shall include, without limitation, electronic cigarettes, cigars, cigarillos, pipes, and hookahs. An electronic smoking device includes any component, part or accessory of such device whether or not sold separately, regardless of nicotine content or any other substance intended to be vaporized for human inhalation during the use of the device.

(b) Possession and Use of a Tobacco Products by Minors.

(1) It shall be unlawful for any minor to knowingly possess, consume, or use, either by smoking, ingesting, absorbing, **vaping** or chewing, any tobacco product.

(2) It shall be unlawful for any minor to knowingly obtain or attempt to obtain any tobacco product by misrepresentation of age or by any other method.

(3) It shall be rebuttably presumed that the substance within a package or container is a tobacco product if the package or container has affixed to it a label which identifies the package or container as containing a tobacco product.

(c) Furnishing Tobacco Products Prohibited.

(1) Any person who knowingly furnishes any tobacco product to any minor by gift, sale, or any other means commits a violation hereof.

(2) It shall be an affirmative defense to a prosecution under this section that the person furnishing the tobacco product was presented with and reasonably relied upon a document which identified the person receiving the tobacco product as being 18 years of age or older.

(d) **Vending Machines.** It shall be unlawful for any person to sell a tobacco product by use of a vending machine or other coin-operated machine; except that cigarettes may be sold at retail through vending machines only in:

(1) Factories, businesses, offices, or other places not open to the public; or

(2) Places to which minors are not permitted access.

(e) Retail Sale of Tobacco Products.

(1) It shall be unlawful for any business proprietor, manager, or other person in charge or control of a retail business of any kind to engage, employ or permit any minor to sell any tobacco product from such retail business.

(2) It shall be unlawful for any business proprietor, manager or other person in charge or control of a retail business of any kind to use a self-service display of tobacco products or stock a tobacco product in any way which allows a customer to access such tobacco product without first securing the physical assistance of an adult business employee for each transaction. The provisions of this subsection (e)(2) shall not apply to stores possessing a valid retail liquor store license, as defined by the Colorado Liquor Code, issued by the City and to vending machines meeting the requirements of subsection (d) of this section.

(3) Any person who sells or offers to sell any cigarettes or tobacco products at retail shall display a warning sign, as specified in this subsection.

(4) Said warning sign shall be displayed in a prominent place in the building and on such machine at all times and shall have a minimum height of three inches and a width of six inches, and shall read as follows:

WARNING:

IT IS ILLEGAL FOR ANY PERSON UNDER EIGHTEEN YEARS OF AGE TO PURCHASE OR POSSESS CIGARETTES AND TOBACCO PRODUCTS. UPON CONVICTION A FINE OF UP TO $500 PLUS NOT

MORE THAN 48 HOURS OF USEFUL PUBLIC SERVICE MAY BE IMPOSED.

(f) **Sale of Single Cigarettes Prohibited.** It shall be unlawful for any business proprietor, manager or other person in charge or control of a retail business of any kind to sell or offer to sell single cigarettes or any pack of cigarettes containing fewer than 20 cigarettes.

(g) **False or Altered Identification.** It shall be unlawful for any person under the age of 18 years of age to misrepresent that person's identity or age, or use any false or altered identification for the purpose of purchasing any tobacco product.

(h) **Penalty.** Any person who violates any provision hereof is guilty of a petty offense and upon conviction shall be subject to:

(1) A fine of up to $50.00 for the first offense; a fine of up to $100.00 for the second offense; a fine of up to $500.00 for a third offense; and up to $1,000 for each subsequent offense; and one year in jail;

(2) Except that a minor shall not be subject to any jail time but may be required to pay a fine not to exceed $500.00, as provided, and may be required to perform not more than 48 hours useful public service (which may include educational efforts or programs) or any combination of fine, public service and education.

(i) **Savings Clause.** Should any provision of said ordinance be found by a court of competent jurisdiction to be unconstitutional or otherwise unenforceable, the rest of the provisions hereof shall remain in full force and effect.

12.08.050 Regulations.

(a) The Parks and Recreation Advisory Board shall propose for adoption by the City Council necessary and reasonable rules and regulations applicable to the use of the riverfront trails, those areas adjacent to the trails and the bodies of water which are owned or controlled by the City and/or the Riverfront Commission, which may be accessed from or are near the trails. The City Council may amend or add to those regulations as may be necessary from time to time to carry out the intent of the Parks Board and/or the intent of the Council.

(b) The City Manager shall cause one certified copy of the regulations adopted under this section, together with the most recent amendments thereto, to be filed with the City Clerk. The City Manager shall make available additional copies at the Office of Parks and Recreation for review by the general public.

(c) The adopted regulations shall have the force and effect of law with respect to all persons who use or visit any of the riverfront trails.

(d) The riverfront regulations promulgated hereunder shall include, but not necessarily be limited to, prohibiting motorized vehicles, except wheelchairs and motorized bicycles as otherwise , maintenance of emergency vehicles, on the trails; prohibiting boats, vessels or craft in the waterways; closing the trails at set times; prohibiting glass containers; prohibiting the possession, consumption or use of ~~malt beverages containing more than 3.2 percent alcohol by weight~~, ~~spirituous or vinous liquor~~, requiring animals to be leashed; prohibiting animals or animals of certain species; and allowing camping, vending or commercial activities by permit only.

(e) After review by the Parks and Recreation Advisory Board, but prior to recommendation of adoption by the Board, any and all regulations shall be submitted to the City Council for its comments, consideration and concurrence, if any.

Introduced on first reading the 19th day of December, 2018 and ordered published in pamphlet form.

Riverside Educational Center
After School Tutoring and Enrichment

Dear Grand Junction City Council Members,

My name is Joy Hudak and I work at the Riverside Educational Center (REC). REC has been serving disadvantaged students in the afterschool hours since 2006. We are now at nine locations and anticipate serving 450 students this academic year.

We appreciate your leadership in the community and noticed the proposal to expand the tobacco and vape free locations in Grand Junction. Research shows local laws requiring public places to be smoke free reduce the number of kids who begin to use tobacco products. Smoke free laws protect the public from the harmful toxins found in secondhand smoke, encourage smokers to quit, and prevent kids from starting to smoke.

We are supportive of the proposed ordinance, but are concerned with the punishment kids can face. We do not support punishing kids who are in the possession of tobacco/tobacco products. Through our programming, we have seen the downhill spiral of students who get in trouble with the law with misdemeanors. The families do not have the resources to pay court fees. Kids lose hope when they are not able to complete their probation and risk further trouble if they don't. The generational poverty cycle repeats as students face trouble with the law and further risk their academic success and opportunities.

There are many evidence-based interventions proven to be effective against youth tobacco use. We ask the City Council to consider one of these interventions. It is critical we focus on reducing the tobacco and vape epidemic our youth are fighting every day without risking their entire future for a poor decision when they are young.

Thank you for your support and please reach out if you have any questions.

Most Sincerely,

Joy Hudak, Executive Director
Riverside Educational Center

MESA COUNTY
PUBLIC HEALTH
Working Together for a Healthy Community

P.O. Box 20,000
Grand Junction, CO 81502-5033
(970) 248-6900
www.health.mesacounty.us

Dear Mr. Caton:

Thank you for taking a leadership role to help address the vaping epidemic and prevent an entire generation from a lifetime of nicotine addiction. Mesa County Public Health (MCPH) strongly supports adding vaping and the use of vape devices as prohibited in workplaces and public places in local ordinances 8.20 and 9.04. Thirty-one percent of Mesa County high school students are currently using an e-cigarette or vaping device, and 60 percent say "it's easy" to get e-cigarettes.[1] The vaping epidemic is hitting Colorado and the rest of the United States.

Ensuring that all public places are smoke and vape free goes a long way to helping our youth win the battle against nicotine. Research shows that local laws that require public places to be smoke free reduce youth initiation. The National Cancer Institute monograph from December 2016 affirms that, smoke free laws protect the public from the harmful toxins found in secondhand smoke, encourage smokers to quit and prevent kids from starting to smoke.[2]

Based on conversations we've had with Colorado Department of Public Health and Environment (CDPHE) regarding best practices in other communities, we'd like for you to consider the following changes to the proposed Ordinance.

We recommend that section *9.04.210 (b) Possession and use of tobacco products by minors* be struck from the ordinance.

Often Minor in Possession (MIP) laws are passed with the intention of reducing youth smoking and vaping by making kids more personally responsible for buying and using tobacco and nicotine products. However, MIP laws have not been proven to be an effective strategy for reducing youth tobacco and nicotine use; and some experts argue that these laws could actually detract from more effective enforcement measures and tobacco control efforts.[3] MIP laws also unfairly punish and stigmatize children, many of whom became addicted at a young age as a result of the tobacco industry's aggressive marketing to kids. In this way, MIP laws shift the blame from the tobacco and vape industry's predatory behavior and irresponsible retail practices onto children. MIP laws do not address the reasons WHY youth are using tobacco and vape. Many youth smokers are addicted, making it difficult for them to quit, and some research suggests that penalizing youth could deter them from seeking support for cessation.

Youth access to tobacco-based products can and should be controlled through higher unit prices for tobacco and vape products, expansion of smoke free policies, strong and well-enforced point of sale laws, and comprehensive tobacco prevention and cessation programs. We strongly urge the City Council to look to one of these interventions. It is critical that we focus on interventions that will significantly reduce the tobacco and vape epidemic our youth are fighting every day.

We recommend that language is added to the definition of Tobacco Products in section 9.4.210(a)(1) as follows: *"however, that such term does not include any product that has been approved by the U.S. Food and Drug Administration pursuant to its authority over drugs"*

This change ensures that any electronic smoking device that is used indoors is an F.D.A. approved cessation device. As the language reads now there is concern that *any device that is used for the purpose of helping a person stop smoking* is permitted.

We recommend that you update the reference for the definition of Tobacco from 25.14.203(17) to its current citation of 18.13.121 CRS. We recommend that you utilize standardized, best practice definitions.

Hundreds of communities across the country have taken action at the local level to address tobacco use. This standardization has led to a uniform approach for defining common tobacco control terms. Please see the attached document for the recommended definitions for electronic smoking device, smoking, smoke, and tobacco and nicotine product.

The changes in this ordinance are critical in the battle against nicotine in order to prevent youth use, encourage tobacco users to quit, and protect all Grand Junction residents from exposure to secondhand smoke.

Sincerely,

Jeff Kuhr, PhD
Executive Director

Tobacco in Mesa County

Tobacco product is defined in Colorado Statute as "*Any product that contains nicotine or tobacco or is derived from tobacco and is intended to be ingested or inhaled by or applied to the skin of an individual.*" This includes traditional tobacco products such as cigarettes, smokeless tobacco like chew, and electronic vapor products. Tobacco continues to be the leading preventable cause of death in the United States, killing a half million people each year. Attitudes about and access to tobacco products impact youth initiation, quit rates, and secondhand smoke exposure. Tobacco use is a community concern that is most effectively impacted by a community response.

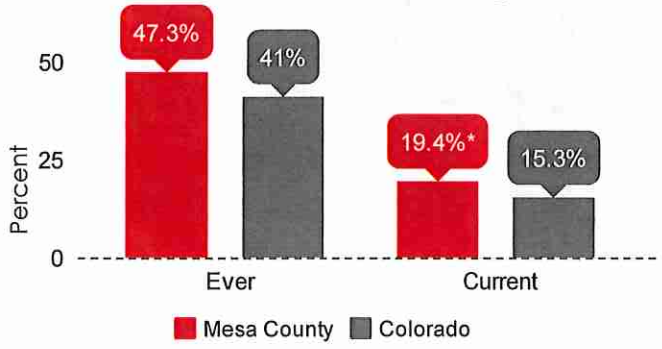
Key Takeaways

Traditional Tobacco Use

- A higher percent of adults still smoke cigarettes in Mesa County compared with the state.
- More adult and high school males use smokeless tobacco products compared with the state.
- Mesa County has seen a decrease in pregnant women who report smoking during pregnancy (a trend also seen at the state level).
- In 2017, chronic lower respiratory disease and other diseases of the respiratory system were two of the top ten causes of death in Mesa County.

Vaping

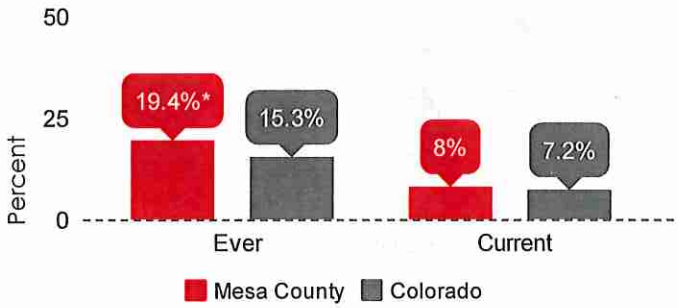
- Electronic vapor products are the second most commonly used substance by high school students.
- Most high school students think vaping is not harmful.
- Youth who vape are four times more likely to smoke cigarettes.



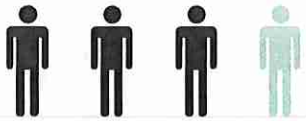
Tobacco Policy

- Most Mesa County students are getting vape products from the Internet or an unspecified source, such as peers.
- Colorado has one of the lowest taxes on cigarettes.
- Nicotine vape products are not taxed in Colorado.

Traditional Tobacco Use



Traditional tobacco products include cigarettes, smokeless tobacco like chew, and cigars. These traditional products kill up to half of their lifetime users. Cigarettes contain approximately 70 cancer-causing chemicals. Smoking harms nearly every organ in the body and causes cancer, heart disease, stroke, lung diseases, diabetes, and chronic obstructive pulmonary disease (COPD). Smoking can also make chronic medical conditions worse. Smokeless tobacco products contain 28 cancer-causing chemicals that have been shown to increase the risk of oral cancer and contain more nicotine than cigarettes. One can of chew is equivalent to three packs of cigarettes.



Percent of Adults Who Use Cigarettes in Mesa County and Colorado, 2015-2017 (average)

*Significantly higher than the state

Percent of High School Students Who Use Cigarettes in Mesa County and Colorado, 2017

Only **3** in **4** Mesa County high school students (76%) think youth cigarette use is wrong.*

*Significantly worse than the state (82%)

Death rates:

Chronic lower respiratory disease, 2017

56.5 per 100,000

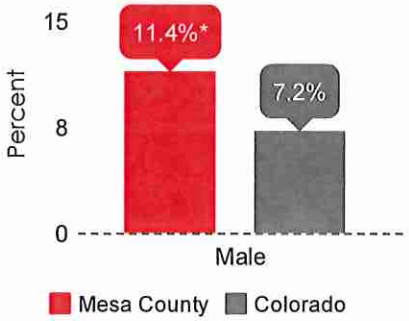
Colorado: 44.8 per 100,000
Such as chronic obstructive pulmonary disease (COPD).

Lung and bronchus cancer 2013-2015

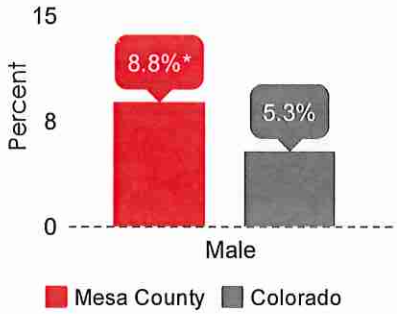
41.4 per 100,000*

*Significantly higher than the state (28.5 per 100,000)

Percent of Women Smoking During Pregnancy



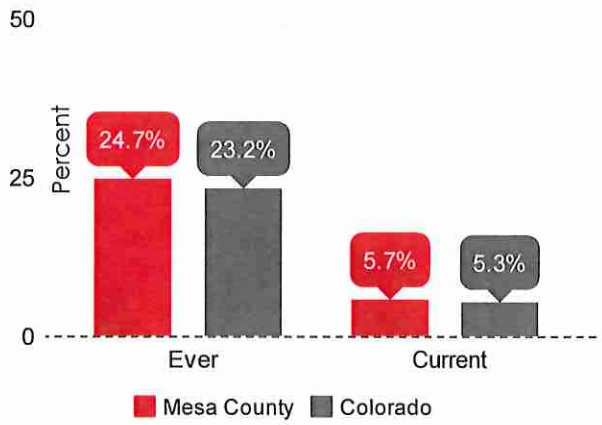
3 in 10 women (31%) smoked during pregnancy, 2004-2008 (average)
Compared to 2 in 10 women (20%) in Colorado.



Approximately 1 in 10 women (8%) smoked during pregnancy, 2014-2016 (average)
Compared to 6% of women in Colorado.

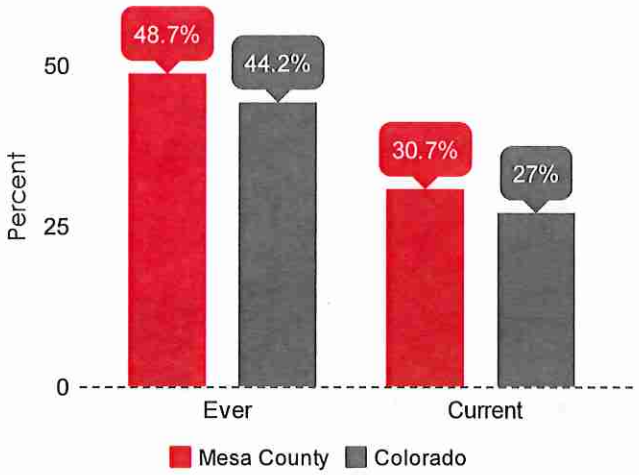
Percent of Adults Who Use Smokeless Tobacco in Mesa County and Colorado, 2015-2017 (average)

Percent of High School Students Who Use Smokeless Tobacco in Mesa County and Colorado, 2017



*Significantly higher than the state.
Charts include males only, as men are the primary users of smokeless tobacco

Vaping

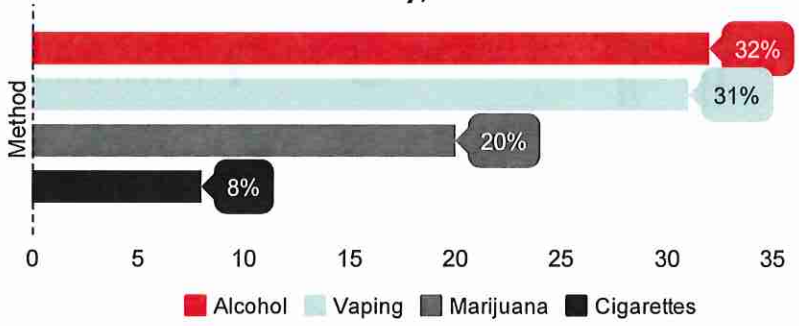


- Many names for electronic vaping products exist, including e-cigarettes, vaporizers, vape pens, mods, tanks, JUULS, and electronic nicotine delivery systems (ENDS).
- Youth who use vape products may be more likely to use traditional tobacco products.
- Vaping devices are becoming more discreet (e.g. being incorporated into the drawstrings of hoodies) and do not have the same strong odor as traditional products.
- Vape devices are not approved as cessation devices by the Food and Drug Administration (FDA).
- No standard regulations exist for vape manufacturers for product design, ingredients, or safety features.

Visit healthymesacounty.org for tips on talking to youth about vaping.

Percent of Adults Who Vape in Mesa County and Colorado, 2016-2017 (average)

Percent of High School Students Who Vape in Mesa County and Colorado, 2017



Only 45%

of Mesa County high school students think vape products are harmful.*

*Significantly fewer Mesa County students think vaping is harmful when compared to the state (50%) and compared to the perceived harm of traditional cigarettes (88%)

Reported Current Substance Use by High School Students in Mesa County, 2017

Similar to Colorado high school students.

Tobacco Policy

The benefits of tobacco control policies include:

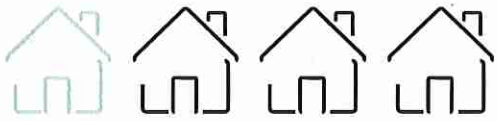
- Reducing
  - Youth initiation.
  - Tobacco consumption.
  - The number of people using tobacco.
- Increasing the number of tobacco users who quit.
- Supporting smokers trying to quit smoking.

Tobacco Control Act (H.R. 1256)

Prohibits:

- Sales to minors.
- Vending machine sales, except in adult-only facilities.
- Sale of packages of fewer than 20 cigarettes (i.e. a pack of cigarettes).
- Free giveaways of sample cigarettes and brand-name non-tobacco promotional items.

Requires:



- Tobacco products and advertisements to include a health warning statement.
- Checking photo ID of everyone younger than age 27 who attempts to purchase tobacco products.

Tobacco Retailers

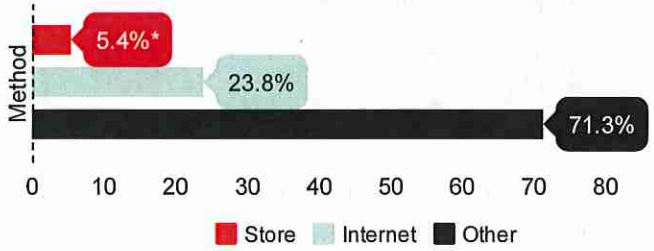
Compliance checks for sales to minors and other federal regulations are conducted by the FDA and Colorado Department of Revenue.

180

tobacco retailers operate in Mesa County.
1.2 retailers per 1,000 population.
1.1 per 1,000 in Colorado.

1 in 4 retailers are within 500 feet of a youth-serving place.*

*Includes child care facilities, schools, parks, community centers, and malls



Nearly **1 in 5** retailers in Mesa County sold a tobacco product to a minor during a compliance check in 2018.

56%

of high school students who smoke cigarettes bought them from a gas station, convenience store, grocery store, or drugstore.

Compared to 51% of Colorado high school students

Reported Method of Getting Vape Product by High School Students in Mesa County, 2017

*Significantly lower than the state (24%)
**The leading thought is that "other" is friends, family, and peers

6 in 10 high school students (60%) think it would be easy or very easy to get cigarettes* or vapor products if they wanted.

*Significantly higher than the state (55.5%)

Colorado Clean Indoor Air Act (C.R.S. 25-14)

Prohibits smoking in any indoor area of public places and buildings including:

- Restaurants and bars,
- Retail and commercial establishments,
- Common areas of multiple-unit residential facilities,
- Public and private schools, and
- Places of employment larger than 3 employees.

Places excluded from the law, include:

- Private homes and residences,
- Private automobiles, except when used for public transportation of children or health care,
- A maximum of 25% of rooms at a hotel or motel, and
- Cigar-tobacco bars.

Prohibits smoking within a 15-foot radius outside main or front doorway of any establishment, unless otherwise defined by local law.

Local Smoke-Free Parks

- City of Grand Junction
- Mesa County
- Fruita - Vape-free too

Local Tobacco-Free Hospitals

- St. Mary's Medical Center
- Community Hospital
- Family Health West

Tobacco-Free Schools

- Prohibits any tobacco use on school property by students, staff and the public.
- Tobacco use includes smoking, chewing, and vaping.
- Prohibits student possession of any nicotine or tobacco-containing product.
- No student shall be expelled solely for tobacco use.

Colorado Tobacco Tax

Amendment 35, approved by Colorado voters in 2004, increased taxes on cigarettes and other tobacco products. One-third of the revenue is allocated to tobacco prevention and treatment.

Colorado Cigarette Tax

$0.84

per pack

Average State Cigarette Tax

$1.72

per pack

Snuff, Chewing Tobacco and Cigar tax

40% of the manufacturing price

Nicotine Vape Products

None

Colorado has the **39th lowest** tax on cigarettes in the United States.

Community Efforts

Cessation

Connecting residents with resources to help them quit tobacco.

- Colorado QuitLine at 1-800-QUITNOW

Prevention

Educating policy-makers, youth, retailers, and the public about the harms of tobacco.

Policy

Developing, supporting and enforcing local, state and national tobacco policies:

- Smoke-Free Indoor
- Smoke-Free Outdoor
- Tobacco Retailer Licensing
- Tobacco Price

Recommendations

- Support Tobacco Free Schools through youth, staff and parent education, consistently enforcing the policy, and providing cessation services to tobacco users.
- Increase public awareness and utilization of evidence-based tobacco cessation services through the health neighborhoods (e.g. medical practices, human service agencies).
- Develop and support state and local policies to reduce youth access and exposure to secondhand smoke.
- Educate about tobacco price as effective tobacco prevention and control.

Grand Junction City Council

Regular Session

Item #8.a.ii.

Meeting Date: February 20, 2019

Presented By: John Shaver, City Attorney

Department: City Attorney

Submitted By: John Shaver

Information

SUBJECT:

An Ordinance to Amend Chapters 12.04 and 12.08 of the Grand Junction Municipal Code and Section 21.06.010 of the Zoning and Development Code Regarding Camping on Public Property/Public Places

RECOMMENDATION:

Staff recommends adoption of the ordinance.

EXECUTIVE SUMMARY:

An Ordinance to Amend Chapters 12.04 and 12.08 of the Grand Junction Municipal Code and Section 21.06.010 of the Zoning and Development Code Regarding Camping on Public Property/Public Places.

BACKGROUND OR DETAILED INFORMATION:

Chapter 12, Section 4 and 8 of the Grand Junction Municipal Code establish laws, rules and regulations for the City's parks and Riverfront. Section 21.06.010 of the Zoning and Development Code relates to allowed use of public right of way and private parking lot use. These sections are necessary to maintain and promote the public health, safety and welfare while providing effective management of public property within the City.

Camping in public areas like parks, streets and the Riverfront interfere with the rights of others to use those areas for the purposes for which they were intended. The City incurs increased costs for policing, maintenance, sanitation cleanup, animal control as a result of camping in undeveloped areas and without proper facilities for certain uses.

The purpose of this ordinance is to assist in maintaining the City in a clean, sanitary and accessible condition; to protect the health, safety and public welfare of the community; and to preserve, protect and enhance the natural resource of the Colorado and Gunnison Rivers for many recreational and other proper uses. The prohibition of camping is not intended to prohibit ordinary recreational use of the parks such as picnicking, resting, or sleeping in parks during park hours. It is the intention of the ordinance to prohibit use of public property for the purpose of maintaining a temporary place to live.

The City affirms its commitment to protecting the constitutional rights of the homeless. This ordinance recognizes that when overnight shelters are full, a homeless person who has no access to private spaces has no alternative but to sleep in a public space. The City shall not engage in enforcement of this ordinance which might have the effect of criminalizing homelessness or constitute cruel and unusual punishment in violation of the Eighth Amendment when there is no shelter space available. The City and the Grand Junction Police Department, work with other agencies and community groups to provide homeless persons with information as to the availability of shelter or services.

FISCAL IMPACT:

None directly attributable to the ordinance/its adoption.

SUGGESTED MOTION:

I move to (adopt/deny) Ordinance No. 4833, an ordinance to amend Chapters 12.04 and 12.08 of the Grand Junction Municipal Code and Section 21.06.010 of the Zoning and Development Code regarding camping on public property/public places on final passage and order final publication in pamphlet form.

1. ORD-Camping to include Riverfront and Zoning Amendments - Revised - 121018 (1)

ORDINANCE NO. _____

AN ORDINANCE TO AMEND CHAPTERS 12.04 AND 12.08 OF THE GRAND JUNCTION MUNICIPAL CODE AND SECTION 21.06.010 THE ZONING AND DEVELOPMENT REGARDING CAMPING ON PUBLIC PROPERTY/PUBLIC PLACES.

RECITALS:

Chapter 12, Sections 4 and 8 of the Grand Junction Municipal Code ("GJMC") establish laws, rules and regulations for the City's parks and Riverfront – those sections are necessary to maintain and promote the public health, safety and welfare, to provide for the continued effective management of public property within the City, and to provide for the continued enjoyment and accessibility of those public places by City residents and the public at large. Section 21.06.010 of the Zoning and Development Code relates to allowed use of public right of way and private parking lot use; the use of public areas, parks, streets and the Riverfront for camping purposes interferes with the rights of others to use those areas for the purposes for which they were intended.
The use of public property for camping causes the City to incur increased costs for policing, maintenance, sanitation pickup and removal, animal control, protection of the environment and other problems which arise from camping in undeveloped areas and without proper facilities for that use.

The purpose of this ordinance is to assist in maintaining the City in a clean, sanitary and accessible condition; to adequately protect the health, safety and public welfare of the community and to preserve, protect and enhance the natural resource of the
Colorado and Gunnison Rivers ("Riverfront") for many recreational and other proper uses. The City Council intends to maintain the use of park property and other public property for their intended uses; however, the prohibition of camping is not intended to prohibit such ordinary recreational use of the parks such as picnicking on a blanket or resting or sleeping in a park during park hours. It is intention of the City Council to prohibit use of public property for the purpose of maintaining a temporary place to live.

Because parks, the Riverfront and other public places have been used by the homeless as camps, the City affirms its commitment to protecting the constitutional rights of the homeless and accordingly this ordinance recognizes that when overnight shelters are full a homeless person who has no access to private spaces has no alternative but to sleep in a public space. Accordingly, the City shall not engage in enforcement of this ordinance which might have the effect of criminalizing homelessness or constitute cruel and unusual punishment in violation of the Eighth Amendment when there is no shelter space available.

The City is committed to safeguarding the rights of all people and in furtherance of this goal works with other agencies and community groups who have an interest in the well- being of homeless persons and when Grand Junction Police Officers contact homeless the officers are encouraged to provide homeless persons with information as to the availability of shelter or other services and to the extent reasonably practicable not

DRAFT

enforce this ordinance when there is no shelter space available, as the same is defined herein.

NOW THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND JUNCTION THAT:

Chapters 12.04 and 12.08 shall be revised as follows (additions are shown in bold print and deletions marked with strike through notations):

Definitions.

For the purpose of this Chapter the following terms, phrases, words and their derivations shall have the meaning provided herein:

"Available Overnight Shelter" means a public or private facility, with all necessary or required City occupancy approvals, open to a person(s) or a family experiencing homelessness with an available overnight space to house the person(s) or family at no charge or a nominal charge (presumptively $5.00 or less per person.) Overnight shelter space shall be considered available if the person(s) is not permitted to use otherwise available overnight shelter space due to the person's voluntary actions, including, but not limited to, intoxication, drug use, unruly behavior, or violation of shelter rules.

"Camp" or "Camping" means to set up or to remain in or at an Encampment.

"Encampment" means any place where bedding, sleeping bag(s) or other things used for bedding purposes, or any stove or fire is placed, established or maintained for the purpose of maintaining a place to stay or sleep, whether or not such place incorporates the use of any tent, lean-to, shack, or any other cover, structure or elements of a structure or any vehicle or part thereof. Ordinary use of a park such as resting or sleeping in a park during normal park hours, picnicking on a blanket or using parks for other lawful uses does not constitute Encampment.

"Overnight Use" means the use of public lands and/or trails pursuant to a permit issued by the City Manager or his designee for an event/programming by and through the City Parks Department for an activity authorized to be conducted overnight.

"Parking Strip" means the area between a curb, or a place where a curb would be located if improvements were installed, and where a sidewalk is located or would be installed.

"Personal Property" means any tangible item reasonably recognizable as belonging to a person and having reasonably apparent utility or monetary value.

"Public Property" means any real property, building or structure owned, used or leased by the City or any Department thereof and/or the Downtown Development Authority (DDA) including, but not limited to, any sidewalk, street, parking strip, alley, lane, public right-of-way, park, open space, breezeway, bench, shade shelter, restroom, playground and other similar property.

DRAFT

"Reasonable Notice" means notice reasonably calculated under all the circumstances to apprise a person that Camping is prohibited at a particular location and, where Personal Property is deposited, affording the person no less than 24 hours to gather his/her Personal Property and depart.

Sleeping on Public Sidewalk, Street, Parking Strip, Alley, Lane or Public Right of Way Without Authorization Prohibited.

Sleeping on a public sidewalk, street, parking strip, alley, lane or public right of way or in any publicly used ingress or egress to Public Property is unsafe as it may obstruct pedestrian and/or vehicular traffic and may place the person sleeping and/or the public in danger of harm. Therefore, except as may be otherwise expressly authorized by the City:

(1) No person may sleep on any public sidewalk, street, parking strip, alley, lane, breezeway or public right-of-way.

(2) No person may sleep in any publicly used ingress or egress to Public Property.

(3) A violation of this section after a request to cease and desist shall be unlawful and shall give rise to any remedy provided by law.

Camping on Public Property Without Authorization Prohibited.

No person may Camp in or upon any Public Property, nor any property owned by other governmental entities that have posted notice prohibiting Camping unless:

(1) The person has the authorization of the owner of the property to Camp at that location; or

(2) ~~Camping~~ An Overnight use is specifically authorized by the issuance of a ~~use~~ permit in accordance with Parks Department regulations ~~GJMC 21.02.120~~; or

(3) Camping is otherwise specifically authorized by GJMC; or

(4) The camper(s) is(are) on Public Property other than a sidewalk, street, parking strip, alleyway, lane, breezeway or public right-of-way, and there is no Available Overnight Shelter; or

(5) Camping is necessary after the formal declaration of an emergency in accordance with City Charter or a declaration of the Governor.

Removal of Unlawful Encampment(s).

Upon discovery of an Encampment(s) on Public Property, removal of the Encampment by the City and/or it authorized agent(s) may occur if:

(1) After Reasonable Notice, the person(s) fails or refuses to remove his/her Personal Property from the location of the Encampment(s); and

(2) Personal property appears to be abandoned; or

DRAFT

(3) There is reasonable suspicion for law enforcement officers to believe that illegal activity(ies) other than Camping are occurring at the Encampment; or

(4) There is imminent danger to human life, health or safety, including, but not limited to, possible contamination of private or Public Property by unsanitary and/or hazardous conditions and/or materials.

Removal, Disposition and Release of Personal Property.

Upon removal of an Encampment, all debris, including items having no reasonably apparent utility or monetary value and items in an unsanitary condition, may be immediately discarded. All other Personal Property shall be gathered, retained, and released, all in accordance with the Reasonable Notice being provided to the property owner. Unclaimed property may be disposed in accordance with GJMC 2.44.020 *et. seq.*

Enforcement and Mitigation.

By enacting this Chapter, it is neither the City's intent to criminalize homelessness nor violate a homeless person's constitutional rights. Likewise, the City does not propose to prohibit the ordinary use of the parks such as resting or sleeping in a park during normal park hours, picnicking on a blanket or using parks or other Public Property for lawful uses. Enforcement of this Chapter shall be undertaken to avoid such results.

Upon conviction for a violation of this Chapter, in addition to any other factors deemed appropriate by the Prosecutor and the Court, the Court shall consider in mitigation whether or not the person immediately removed all Personal Property and litter, including, but not limited to, bottles, cans and garbage from the encampment after being informed the camping was in violation of the law.

Application to City Property Outside City Limits.

This Chapter applies to Public Property owned by the City that is located outside the City's municipal limits.

Sections 12.08.050, 12.08.140 and 21.06.010 shall be amended as follows with all other provisions of such Chapters and Sections to remain in full force and effect:

12.08.050 Regulations.

(e) The riverfront regulations promulgated hereunder shall include, but not necessarily be limited to, prohibiting motorized vehicles, except wheelchairs, maintenance of emergency vehicles, on the trails; prohibiting boats, vessels or craft in the waterways; closing the trails at set times; prohibiting glass containers; prohibiting the possession, consumption or use of spirituous liquor, requiring animals to be leashed; prohibiting animals or animals of certain species; and allowing ~~camping~~ overnight use in accordance with permit, and vending or commercial activities by permit only.

DRAFT

12.08.140 Regulations relating to trails, lands and waters.

(b) No person shall:

(7) Camp, park a motor vehicle, trailer or camper on Riverfront lands or trails, with the intention or for the purpose of camping unless**:** ~~such is by the authority of a camping permit issued by the Department of Parks and Recreation of the City of Grand Junction. Possession of a valid camping permit shall authorize the use of the Riverfront lands and trails subject to the terms and conditions imposed thereon by the Director or his designee.~~

~~"Camp" means the use of camping equipment or facilities such as tents, tarpaulins or temporary shelters or the use of temporary cooking and bedding facilities such as open fires, camp stoves and cots, bedrolls, hammocks or sleeping bags.~~

(i) The person has the authorization of the owner of the property to camp at that location; or

(ii) ~~Camping~~ Overnight use is specifically authorized by the issuance of a ~~use~~ permit ~~in accordance with GJMC 21.02.120~~; or

(iii) Camping or overnight use is otherwise specifically authorized by GJMC; or

(iv) There is no Available Overnight Shelter; or

(v) Camping is necessary after the formal declaration of an emergency in accordance with City Charter or a declaration of the Governor.

"Camp" or "Camping" means to set up or to remain in or at an Encampment.

"Encampment" means any place where bedding, sleeping bag(s) or other things used for bedding purposes, or any stove or fire is placed, established or maintained for the purpose of maintaining a place to stay or sleep, whether or not such place incorporates the use of any tent, lean-to, shack, or any other cover, structure or elements of a structure or any vehicle or part thereof. Ordinary use of the trail system such as resting or sleeping on a bench during normal trail hours or using the trails for other lawful uses does not constitute Encampment.

"Available Overnight Shelter" means a public or private facility, with all necessary or required City occupancy approvals, open to a person(s) or a family experiencing homelessness with an available overnight space to house the person(s) or family at no charge or a nominal charge (presumptively $5.00 or less per person.) Overnight shelter space shall be considered available if the person(s) is not permitted to use otherwise available overnight shelter space due to the person's voluntary actions, including, but not limited to, intoxication, drug use, unruly behavior, or violation of shelter rules.

"Overnight Use" means the use of public lands and/or trails pursuant to a special permit where an event is authorized to last overnight.

DRAFT

21.06.010 Infrastructure standards.

(b)(4)(iv) Public Right-of-Way and Private Parking Lot Use.

(iv) ~~Overnight camping shall not be allowed in a public right-of-way or in any private parking lot made available to the public, unless specifically permitted by the City for such use.~~ Parking of an RV or any vehicle for more than 72 hours shall not be allowed in a public right-of-way or on any vacant lot.

DRAFT
