ARIX

Professional Offices Development in H.O. Zone

> Project Statement Impact Statement

February 28, 1983

PROJECT

Since 1965 ARIX has grown at a steady rate. We now find ourselves needing more space for staff and higher technology equipment, and consolidation of staff at one location in Grand Junction.

The needs of the firm can be accommodated in 13,100 square feet of space while the property now owned by the firm on Horizon Drive can accommodate a substantially larger office oriented project. Yet current market trends suggest a cautious approach to construction of new office space. Therefore, we are planning a phased construction project to provide initially only space to be occupied by ARIX with very limited tenant areas.

The new structures will be designed to blend with the existing structure using brick, wood shingles, and some natural woods. The first phase structure will be only two stories high (maximum height of 37 feet) and the second phase structure will be three stories high (maximum height 60 feet). Site development and landscaping will be similar to the existing with the incorporation of screen fencing and landscaping along the northeast property line.

PHASING

The first phase shall consist of 13,000 square feet of new office space and conversion of the existing 3800 square foot building to tenant space. This phase shall commence within two months of the approval for this development. The temporary facility will be removed upon completion of Phase I.

Second phase shall consist of as much as a 32,000 square foot structure. This will be commenced in 1988 or sooner as the market will bear.

ARIX Professional Offices Page 2

PROPOSED USES

Occupancies for the buildings in both phases shall be principally professional offices and certain associated uses as follows:

Financial institutions Neighborhood service offices Government offices Barber and beauty shops Specialty clothing Health clubs Drive-up financial institutions

Because the current use is offices there will not be a significant change in use.

TRAFFIC

Traffic circulation for vehicles and pedestrians is shown on the development plan. Traffic plan is not provided due to nature of this project. Vehicular trips are shown below:

Site Generated Traffic Volumes

Morning Peak Hour	Vehicles Per Hour Phases I & II	Phase I
Inbound	100	32
From south (RT)	85	27
From north (LT)	15	5

Discourse Thread TT

FIRE PROTECTION

Using ISO and City of Grand Junction standards, the required fire flow for this project is 2800 gpm. This will require two fire hydrants as shown on the utilities composite.

RIGHT-OF-WAY VACATION

ARIX is seeking vacation of 40 feet of right-of-way along Horizon Drive the entire length of our frontage. The original plat was filed dedicating 60 feet of additional right-of-way to the original 40 feet. As a result the total right-of-way as it is now is 140 feet along our frontage (40' on the north, 100 ' on the south).

Because right-of-ways along other areas of Horizon are more restrictive, the City of Grand Junction designed improvements to be contained well within a 100 foot R.O.W.. As a result, to make better use of this land we request vacation of R.O.W. and establishing a utility easement. This allows ARIX to establish a parking lot in this area and obtain more flexibility in our planned development. C Neal Carpenter, *Sreside:It* N. Kent Baker Eugene R. Brauer Gordon W. RECENTY EDD MAR 23 1933

City/County Development Dept. 559 White Avenue, Room 60 Grand Junction, Colorado 81501

Gentlemen:

SUBJECT: RIGHT-OF-WAY VACATION AND DEVELOPMENT IN H. O. ZONE ARIX PROFESSIONAL OFFICES

In response to the review comments received by this office on March 17, 1983, we have the following comments and responses.

- 1. Prior to construction of the project, we will provide the Fire Department and other related agencies with complete plans for their review. We have sized the fire line and fire hydrants based on our projected need of fire flow for the structure. We have contacted Wes Painter with the Fire Department and agreed to provide a "knox-box" for the structure.
- 2. In discussions with Don Hobbs of the City Parks Department we will modify the Locust variety type from Shademaster to Skyline.
- 3. A drainage easement which varies in size and has a minimum size of 20 feet, does exist along the southwest property line. This is noted on the plat as a drainage easement and will be retained in our project. We understand the need for the water tap during the construction of Horizon Drive improvements. We have contacted Ute Water and are willing to extend the water line beyond the Horizon Drive rights-of-way at this time assuming that Ute Water can accommodate this request.
- 4. The City Engineer, Public Service and Mountain Bell have all requested that the right-of-way vacation be approved subject to the implementation of a utility easement in this area. It was our intention to provide this easement and apparantly was not clearly identified on our submittal materials. In answer to all these comments, the right-ofway is requested to be vacated which will be converted over to a utility easement of the same size and area.

- 5. We understand that certain specific uses which require conditional approval will be reviewed and approved by the City Planning staff, such as drive-up windows. Any proposed use will be submitted to them for their review and comments.
- 6. In selecting and locating landscaping, we will be aware of the site problems at intersections. We will select the appropriate landscaping and maintain it at the appropriate heighth to guarantee adequate vision.
- 7. The landscaping chosen and shown on our submittal is predominately low water consumption plantings. We will be forced to maintain this landscaping with Ute Water due to the fact water rights from the Highline Canal are not available to this property.
- 8. The detail of the sign will conform with the Grand Junction sign code and will not conflict with site problems at the intersection.
- 9. We have obtained an avigation easement form from the Development Department. The completed form is included with this letter.
- 10. In discussions with Charlie Stockton of Ute Water, he requests that the fire line be installed in an easement (as it is proposed to be) and that it not be under the screen fence. Therefore, we will need to locate the screen fence near the property line and locate the pipeline nearest the driveway which serves this project. The fence will still retain its variable plane design, but with a much smaller dimensional change.

We hope that these address the comments adequately. If there are any other comments or questions, please contact me directly.

Respectfully,

ARIX, A Professional Corporation

Mr

John Quest Senior Project Manager

EXHIBIT A

THIS EASEMENT is made and entered into by and between the WALKER FIELD, COLORADO, PUBLIC AIRPORT AUTHORITY, a body corporate and politic and constituting a political subdivision of the State of Colorado, hereinafter called GRANTEE, and ARIX, A Professional Corporation

hereinafter, GRANTOR;

WHEREAS, Grantee is the owner and operator of Walker Field Airport situated in the County of Mesa, State of Colorado, and in close proximity to the land of Grantor, and Grantee desires to obtain and preserve for the use and benefit of the public a right of free and unobstructed flight for aircraft landing upon, taking off from, or maneuvering about said airport; and

WHEREAS, Grantor is the owner in fee simple of that certain parcel of land situated in the County of Mesa, State of Colorado, to wit:

NOW, THEREFORE, in consideration of the sum of One Dollar (\$1.00) and other good and valuable consideration, the receipt of which is hereby acknowledged, the Grantor, for himself, his heirs, administrators, executors, successors and assigns, does hereby grant, bargain, sell and convey unto the Grantee, its successors and assigns, for the use and benefit of the public, an easement and right of way appurtenant to Walker Field Airport, for the passage of all aircraft ("aircraft" being defined for the purposes of this instrument as any device known or hereafter invented, used or designed for navigation or flight in the air) by whomsoever owned and operated, in the navigable airspace above the surface of Grantor's Property to an infinite height above said Grantor's property, together with the right to cause in said airspace such noise and vibrations, smoke, fumes, glare, dust, fuel particles and all other effects that may be caused by the normal operation of aircraft landing at or taking off from or operating at or on said Walker Field Airport, and Grantor hereby waives, remises and releases any right or cause of action which Grantor now has or which Grantor may have in the future against Grantee, its successors and assigns, due to such noise, vibrations, smoke, fumes, glare, dust, fuel particles caused by the normal operation of such aircraft.

FURTHER, Grantor hereby covenants, for and during the life of this easement, that Grantor:

(a) shall not hereafter construct, permit or suffer to maintain upon said land any obstruction that extends into navigable airspace required for use of said airport runway surfaces; (Navigable airspace is defined for the purpose of this instrument as airspace at and above the minimum flight altitudes, including take off and landing, as prescribed in Federal Aviation Administration Federal Air Regulations Part 91, and as such regulations are amended.)

(b) shall not hereafter use or permit or suffer use of said land in such a manner as to create electrical or electronic interference with radio communication or radar operation between the installation upon Walker Field Airport and aircraft, or to make it difficult for flyers to distinguish between airport lights and others or to result in glare in the eyes of flyers using the said airport, or to impair visibility in the vicinity of the airport, or otherwise to endanger the landing, taking off or maneuvering or aircraft. Grantor agrees the aforesaid covenants and agreements shall run with the land for the benefit of Grantee, its successors and assigns, until said airport shall be abandoned and shall cease to be used for public airport purposes.

IN WITNESS WHEREOF, the Grantor has hereunto set his hand and seal on this $18^{\frac{19}{2}}$ day of <u>March</u>, A.D. 19<u>83</u>.

ARIX 2021 Clubhouse Drive Greeley, Colorado 80631

Attention: Mr. Bob Regan Vice President

Project: ARIX Office Building 760 Horizon Drive Grand Junction, Colorado Project No. 6122J045 Invoice No. 61220070 P. O. No. 17204

In accordance with your request, this firm has provided geotechnical engineering services for the proposed ARIX office building to be located at 760 Horizon Drive in Grand Junction, Colorado. The purpose of these services is to present engineering recommendations relative to foundation design, surface drainage, and earthwork procedures.

It is our understanding that the proposed structure will be a three-story slab-on-grade building utilizing steel and masonry construction with a steel joisted roof. Column loads are assumed to be 160 to 350 kips. It is anticipated that finished floor level will be at or slightly above existing site grade near the edges of the building, and that the existing pond area will be filled to meet the surrounding grade.

Previous site development includes an existing office building to the south of the proposed building, landscaped area and a pond. Although fill zones or underground facilities such as basements and utilities were not observed, they may be encountered during construction. The ground surface is relatively flat with the exception of the existing pond which is approximately 15 to 20 feet deep. ARIX Office Buildi Project No. 6122J045

1.000

1

Site drainage is to the north-northwest, although depressions exist which could result in surface ponding. The existing office building is a single story structure with a full basement. Some distress was observed in the basement area.

Seven test borings were drilled at the locations shown on the accompanying site plan. During test drilling, subsoils were visually examined and sampled at selected intervals. Surface soils to depths of 2 to 32 feet are stiff to soft moist silty clays and clayey silts of medium density and medium plasticity. The materials underlying the surface soils and extending to the full depth of auger penetration consisted of slightly to highly weathered clayshales of the Mancos formation. Test boring depths ranged from 19 to 39 feet below existing grade. Groundwater was encountered in Test Borings 1, 2, 5, 7, and 9, at depths ranging from 9.5 to 15.0 feet below existing grade at the time of this exploration.

Laboratory test results indicate that the native upper clayey subsoils at shallow foundation level exhibit relatively low compressibility at natural moisture contents and a moderate tendency to compress additionally under an increased moisture condition upon loading. On-site near surface soils exhibit low to moderate expansive potential when saturated. The underlying clayshales exhibit a moderate to high expansive potential when saturated.

<u>Foundations</u>: Due to the variable nature of bearing soils, variable levels of groundwater encountered, and the wide variation in loads, a foundation system consisting of driven piles founded in the clayshales appears to be the most feasible for support of the structure.

ARIX Office Buildi Project No. 6122J045

1000

The recommended allowable pile loads apply to dead load plus design live load conditions. Grade beams between pile caps should be founded a minimum of 3.0 feet below finished grade. Finish grade references should be considered as lowest adjacent grade for perimeter grade beams and as floor level for interior grade beams.

It is recommended that 10HP42 or 12HP53 piles placed in pre-drilled holes, drilled a minimum of 4.0 feet into the weathered clayshale and driven to bearing on the hard, dense clayshale formation appear to be the most suitable pile foundation type. For piles thus installed, an allowable load of 120 tons per pile should be used for design. The piles should be driven by a hammer not exceeding a rated energy of 25,000 This energy should achieve the proper penetration and ft-lbs. also limit the stresses during driving to minimize the possibility of damage to the pile. All pre-drilled holes should be backfilled with sand upon completion of pile drilling. During pile installation, the Janbu formula should be utilized to define the required driving resistance. A factor of safety of 3 should be applied. Pile driving should be observed by the geotechnical consultant to assess whether or not recommended set is obtained during driving.

The minimum center-to-center spacing on the driven piles is recommended as three pile diameters in order to develop full capacity of the group. The settlement of pile groups, with the individual piles being loaded to the full design load, is estimated to be of the order of 1/4 to 1/2 inch. This settlement should take place rapidly following load application.

To reduce the potential for distress caused by differential foundation movements, all grade beams and masonry walls should be reinforced. The use of joints at openings or other discontinuities in masonry walls is recommended.

ARIX Office Build Project No. 6122J045

If the soil conditions encountered are significantly different than those presented in this report, this firm should be contacted for verification and/or supplemental recommendations.

<u>Site and Subfloor Preparation</u>: It is anticipated that excavation to foundation and utility line grades and to interior floor subgrade areas within building area may be accomplished with conventional excavation equipment. Due to the moderate expansive potential of compacted on-site soils, it is recommended that floor slabs be founded on imported compacted fill of low expansive potential. The following procedure is recommended for preparation of the building site for support of concrete slabs-on-grade:

 Strip and remove existing vegetation, fill, debris, rubble, loose or soft surface soils, structural remnants or other deleterious materials from the building areas. Clean and widen depressions, pits, ditches, or underground facilities to accommodate compaction equipment.

Prior to placement of fill materials, all surfaces should be level and free from ruts, hummocks, or other uneven features which could impede uniform compaction. sloping areas steeper than 5:1 (horizontal:vertical) should be benched to prevent slippage planes between existing slopes and fills. Benches should be level and wide enough to accommodate compaction and earthmoving equipment.

2. Rework, moisten or dry as required, and compact all exposed surface and subgrade soils to a minimum depth of 12 inches. Reworking may be accomplished by scarification, discing, removal and replacement or other method which will result in uniform moisture contents and densities.

ARIX Office Buildin Project No. 6122J045

- 3. Place and compact required fill in horizontal lifts to finished subgrade levels. Lift thickness is contingent upon compaction equipment used to achieve the minimum specified densities. The use of on-site soils below slabs-on-grade is contingent upon stringent moisture control during compaction. Imported fill materials should exhibit a low expansive potential.
- 4. Provide moderate slab reinforcement and carry the reinforcement through the interior slab joints, but not foundation walls or load-bearing walls. Slip joints should be used around all column pads and load-bearing walls to help keep the slab independent of the foundation system.
- 5. Omit under-slab plumbing. Where such plumbing is unavoidable, pressure test it during construction to minimize the possibility of leaks that result in foundation wetting.
- Concrete floor slabs should be underlain by four inches of well graded sand and gravel aggregate base course.

Base course should conform with the local governing agency's specifications and imported fill should meet the following criteria:

Gradation (ASTM C136):
percent passing by weight
6" Sieve Size

4" Sieve Size No. 200 Sieve Size 100 70-100 40 (max)

1.5%

o Maximum Expansive
Potential*

ARIX Office Buildi Project No. 6122J0

I

I

Π

Π

Π

Π

Maximum Percent 0 Soluble Sulfates

*Expansive potential measured on remolded sample compacted to 95 percent of the maximum dry density as determined in accordance with ASTM D698 at a moisture content of 3 percent below optimum.

0.10

The compaction of all fill materials should be performed to the specified percent of the maximum dry density as determined in accordance with ASTM D698. On-site clay soils should be compacted within a moisture range of 1 percent below to 4 percent above optimum. Imported soils should be compacted within a moisture range of 3 percent below to 3 percent above optimum.

Material

Percent Compaction

On-Site subgrade soils: Below foundation elements95 Below slabs-on-grade90 Below pavement95	to 95
Subbase fill (imported): Below foundation elements95 Below slabs-on-grade95	
Aggregate base course95	(minimum)
Miscellaneous backfill (not intended for lateral support of pipelines)90	(minimum)

Recommendations for slabs-on-grade and foundation elements supported on compacted fills or prepared subgrade are dependent upon satisfactory site preparation and the placement and compaction of subsequent fill zones. Therefore, earthwork relative to structural support should be accomplished under observation and testing directed by the geotechnical engineer. Observation and testing should also be provided during site grading and the placement and compaction of all backfill, subbase fill, and base course to assess compliance with project requirements.

ARIX Office Buildin Project No. 6122J045

<u>Drainage</u>: Positive drainage should be provided during construction and maintained throughout the life of the proposed development. Infiltration of water into utility or foundation excavations must be prevented during construction. Consideration should be given to the collection and diversion of roof runoff and to the elimination of planting areas and any other surface features which could retain water in areas adjoining the building.

In areas where sidewalks or paving do not immediately adjoin the structure, it is recommended that protective slopes be provided with an outfall of approximately 4 percent for at least 10 feet from perimeter walls. Backfill against footings, exterior walls, and in utility and sprinkler line trenches should be well compacted and free of all construction debris to minimize the possibility of moisture infiltration.

Limitations: The recommendations presented in this report are for a specific project and are based on the assumption that soil conditions do not deviate appreciably from those disclosed in the borings. If any variations or undesirable conditions are encountered during construction, the geotechnical engineer should be notified so that supplemental recommendations may be made.

If you have any questions concerning this report or if we may be of additional service, please contact us.

Sincerely yours, WESTERN TECHNOLOGIES, INC. Geotechnical Services

REVIE	W SHEET SUMMARY
FILE NO. 13-83 TITLE HEAD	DINGROW Vacation-Dev. in H.O. DUE DATE 3/11/83
	ION - PHASE - ACRES Petitioner: ARIX/Gordon Buchner. Location:
	ion Technological Center Subdivision. A request for professional
	pproximately 2.9 acres in a highway oriented zone.
Consideration of development	
	Reueva 32
PETITIONER ADDRESS 760 Horizo	n Drive
ENGINEER	<u>ک</u> ، برد.
DATE REC. AGENCY	COMMENTS
3/4/83 Fire Dept.	This office has no objections to this HO & Vacation. We
Wespain 101 - 200 202 - 200	can accept fire protection with new 10 inch line and 2 hydrants as such on utilities plan. Line and hydrants to be installed before construction. Site plans and building plans must be submitted to compute fire flow. Contact ' Fire Dept. on "Knox-Box" key requirements. Fire only to blass. Set application flow. They might up to blass. Set applications.
3/7/83 Dr Hebbs. Skyune	They might want to look at other varieties of Locust. Shademaster is good but difficult to trim when mature.
3/9/83 City Engineer	A 10 ft. drainage easement should be dedicated along the southwest property line to accommodate the existing major drainway along the northeast bank of Highline Canal. I take no exception to the street right of way vacation. Horizon Drive improvements are currently under construction. Is it possible to get the water tap installed under Horizon Drive before it is paved? A 20 ft. easement should be granted on the Sanitary Sewer in Horizon Drive if the vacation is approved.
× 3/11/83 / Public Service	Gas: We have an existing 2" M.W. gas main within the 40' that is being requested as ROW vacation. A utility easement will be needed in this area if ROW is vacated. Electric: Vacation subject to establishing a utility easement.
3/16/83 City Planning Staff	Impact Statement: This department takes no exception to proposed phasing of this project. However, on page 2 with the proposed uses, the actual use intended may require additional information and thus additional site review may be necessary. A drive-up window of a financial institution is an example. It should be understood, that once a proposed use is established, to check with this department to verify the use as valid and the site can accommodate that use. The uses mentioned are not unreasonable, but will require a review of the site prior to the time they wish to occupy.
	The traffic analysis looks reasonable. Any modifications to Horizon Drive will certainly help mitigate the impact. The ROW vacation seems to pose no problems as long as all other review agency concerns are met.
CLEANTE MILAN UNTER JOUR	 Site Plan: This project is compatible with the surrounding area. With the landscaping, watch for any sight-distance problems at access points (30" max. ht. for landscaping to prevent sight distance problems). It notes that this will be irrigated. Are water rights for irrigation available? Parking numbers are adequate for each pahse. All spaces look valid for Phase I. Signage detail should conform to present Grand Junction sign code and not create any sight problems. The development schedule indicates 2 months from approval, construction for Phase I will begin. This is your development schedule which you will be obligated to fulfill.

•

6) An avigation easement will be required by you since you now are within the "area of influence" of the airport overlay. Please see this deparment or Walker Field for this. It is required prior to approval.

This is a good site plan incorporating all the concerns of this department. Nice job.

Review Lummary Mailed 3/14/83

3/16/83

Mountain Bell (late)

No objections.

3/16/83

Ute Water (late)

No objections to expansion. Direct contact with ARIX on water services will be made. Policies and Fees in effect at the time of application will apply.

4/7/83 GJPC MINUTES OF 3/29/83

MOTION: (COMMISSIONER QUIMBY) "MR. CHAIRMAN, ON ITEM #13-83, DEVELOPMENT IN HO ZONED FOR PROFESSIONAL OFFICE AND TENANT SPACE WITH PETITIONER AIRX AND GORDON BRUCHNER THAT WE SEND THIS TO CITY COUNCIL WITH THE RECOMMENDATION OF APPROVAL ON PHASE I ONLY, SUBJECT TO STAFF AND REVIEW AGENCY COMMENTS."

COMMISSIONER O'DWYER SECONDED THE MOTION.

CHAIRMAN TRANSMEIER REPEATED THE MOTION, CALLED FOR A VOTE, AND THE MOTION PASSED, 5-0.

MOTION: (COMMISSIONER O'DWYER) "ON ITEM #13-83, RIGHT OF WAY VACATION FOR ARIX, I MOVE WE FORWARD THIS TO CITY COUNCIL WITH THE RECOMMENDATION OF APPROVAL."

COMMISSIONER QUIMBY SECONDED THE MOTION.

۰,

March 14, 1983

City/County Development Department 559 White Avenue, Room 60 Grand Junction, Colorado 81501

Gentlemen:

ARIX PROFESSIONAL OFFICES, DEVELOPMENT IN HO ZONE AND SUBJECT: VACATION OF HORIZON DRIVE

We have received review agency comments from Public Service dated March 8, 1983. Subsequent to this we have talked with Harold Tuxhorn of Public Service and explained that an easement would be provided for all the utilities located in that portion of the right-of-way for which we are requesting a vacation. This complies with their comments which were the only comments concerning our request.

Respectfully,

ARIX, A Professional Corporation

John Quest Senior Project Manager

JQ:cec

cc: Harold Tuxhorn, Public Service Co.

CITY - COUNTY PLANNING

grand junction-mesa county 559 white ave. rm. 60 grand jct.,colo. 81501 (303) 244-1628

TO: All Petitioners

opment

FROM: City Planning Dept./Grand Jct. Planning Commission

DATE: March 26, 1984

RE: Extension Requests

A public hearing of the Grand Junction Planning Commission was held on March 20, 1984 to recommend extension requests to all those Petitioners requesting one.

Your project # 13-83 was granted an extension until April 1, 1985. This is for the construction of the new office building. - Tennorary office - November 1,1984 We appreciate your response and time in helping us with these items. It will benefit the City in dealing with future improvements. Enclosed please find a copy of the minutes of those hearings.

Good luck on your projects and we will be in touch next year.

Thanks again.

BG/tt

Grand Junction Planning Commission City Planning Department 559 White Street Grand Junction, Colorado 81501

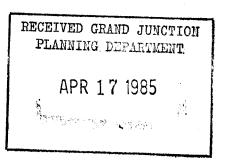

Gentlemen:

SUBJECT: ARIX, A PROFESSIONAL CORPORATION PROJECT FILE NO. 13-83

The following information is provided in accordance with your request for information and project status.

- 1. The location of the project is 760 Horizon Drive. The owner is ARIX, A Professional Corporation. The local representative is John Quest or Gordon Bruchner.
- The current status of the project is that it is on hold due to the down turn of business volume. When this changes and we find it appropriate to add to our staff, the project will be feasible. We currently are using nearly all of the available office space, thus we do not anticipate any changes in the approved plan.
- 3. We are unable to predict with any certainty when we will require additional staff and space for them to work.
- 4. At the previous review of this project, it was requested that we consider what would be necessary to qualify our modular office space for classification as a permanent structure. We have done so during this past year. The results of that study is that it is not cost effective to up grade the modular space to comply with your requirements for a permanent building.
- 5. The form indicates that no right of way is needed.
- 6. We request a one year extension for this project.

Our Company has gone to great lengths to bring work to our Grand Junction staff. Several engineering members have been working on projects located in Utah and Wyoming during this past year in addition to Colorado and local work. The same is true for some of our low level radiation uranium mill tailings staff. They have some project work on the east coast. These efforts have resulted in our firm being able to keep a comparitively stable

Grand Junction Planning Commission Page 2 April 16, 1985

work force of approximately 30 local professional staff resulting in an annual local payroll in the range of \$700,000. Additionally, we operate a fleet of vehicles from Grand Junction and make many local purchases.

Bringing work from remote locations to keep our staff fully utilized and productive adds to the expense of doing that work. It requires substantial costs in time and travel. It is our expectation to continue to function in this manner for the foreseeable future. Notwithstanding, ours is a competitive business and we cannot absorb additional costs for office space plus these travel costs.

If the extension cannot be granted, it is appropriate for you to know that because of the above factors, we most likely would be looking at reducing our staff to match the needs of the local work. We have no desire to do so and would much prefer to continue to help the local scene by bringing outside dollars into the area in the form of salaries and local purchases for work on projects outside the area.

Please call me if you have any questions or believe this request will not receive favorable action.

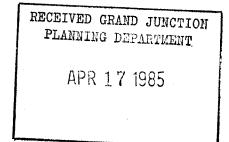

Respectfully,

ARIX, A Professional Corporation

ARIX 760 Horizon Drive Grand Junction, CO 81501

Dear Sirs:

Building Permit #6820 was issued on February 10, 1981 to Gregory S. Robson for the placement of a double wide mobile home to be used as temporary office space not to exceed two years. On July 6, 1983 and in answer to a request made by John Quest, the permit was extended until February 10, 1984 by then Chief Building Official, Richard Hollinger.

There was a stipulation at that time that if the permanent building expansion was not under construction by February 10, 1984, the mobile home would be required to be removed. Once again in March of 1984, there was a request for the permit to be extended and the City Planning Commission saw fit to extend the temporary use of the mobile home until November 1, 1984 with the understanding that it would be removed, be made a permanent structure (per UBC) or the expansion of ARIX's facilities be undertaken.

Since your building permit is now null and void per Section 303 of the 1983 Uniform Building Code, we are obligated to take the necessary action to ensure compliance. After discussions with Gordon Bruchner and John Quest, we feel you have one of three options to consider:

- Remove the temporary structure, since the building permit has expired and will <u>not</u> be extended solely for a temporary office any longer.
- 2) Apply for and gain approval of a building permit(s) for your planned expansion. The temporary structure may be part of that permit. However, unless an approved building inspection is completed within the 180 day period, no further extensions will be granted.
- 3) Take no action, or not fulfill #1 and #2 above, which will require us to turn this matter over to the District Attorney's office for legal prosecution.

KRIX May 17, 1985 Page 2

.

We have attempted to work with and accommodate your company's needs beyond normal procedures. It is now up to you to fulfill your obligations. The City Building and Planning Departments will give you 30 days to make your decision.

Thank you for your consideration and cooperation in this matter.

Sincerely, 22

Bob Goldin J Senjor City Planner

MEMORANDUM

Arix Dev. in HO file

Bob Goldin City Planning

T0:

FROM: Roy "Andy" Anderson Chief Building Official

DATE: June 6, 1985

SUBJECT: Arix Mobile Office

Mr. Lee Compton of Arix contacted me on June 5, 1985, regarding the mobile home that they are using for temporary office space at 760 Horizon Drive. He informed me that Arix is presently conducting a study to determine the costs involved in modifying the trailer so that it might be approved as a permanent structure.

I will continue to keep you informed regarding my contacts with them.

Deu, in HO Arix # 13-8

June 17, 1985

Mr. Bob Golden, Senior City Planner Grand Junction Planning Department 559 White Avenue, Room 60 Grand Junction, Colorado 81501

Dear Mr. Golden:

We have determined that we will be completing the necessary construction to qualify our temporary office building as a permanent structure. Our architect, Lee Compton, has reviewed the items contained in Mr. Anderson's early letter, and we believe we understand the required construction. Foundation designs and additional floor support designs are currently being done. We will be applying for a building permit within 30 days.

Thank you again for your help and understanding in working with us.

Respectfully,

ARIX, A Professional Corporation
