GENERAL PROJECT REPORT

EAGLE CREST AT THE RIDGES

Revised August 13, 1996

INTRODUCTION:

The accompanying narrative and maps will provide sufficient data to assess the merits of the request for a subdivision of the final plat. This re-subdivision involves taking Lot 2 and Lot 3 and creating one lot, which will be called Eagle Crest Filing No. Two.

PROJECT DESCRIPTION:

Eagle Crest contains approximately three acres. Eagle Crest is located in the City of Grand Junction on the Redlands. The property is located in part of the S. E. 1/4 of Section 17, Township One South, Range One West, of the Ute Meridian. The site is also known as Lot 17, The Ridges, Filing Number 6.

The following Land Use Summary chart breaks down the entire subject property into specific uses under developed conditions.

LAND USE SUMMARY CHART

USE	UNITS	AREA	% OF TOTAL
Single Family	7	2.208	74.59
Street R.O.W.		0.0707	23.89
Open Space		0.045	1.52
TOTAL	7	2.96	100
DENSITY	2.36 DU/AC		

EXISTING LAND USE:

The site is vacant of structure and is in a fallow state. Agricultural production has never occurred on the property. The Site is not affected by any natural drainage flows since it is located on the top of a hill. Topography of the property is flat on the hill top. However, slopes of the hillside, within the site, approach 40 percent grades at the steepest areas. The hilltop within Eagle Crest slopes toward the East at an average rate of 1.5 percent. The Subject property is zoned PR-12 (Planned Unit Development) by the City of Grand Junction.

PUBLIC BENEFIT:

Eagle Crest will provide the residents of the area with a quality land development, with extraordinary views of the valley and will be designed, constructed and maintained in accordance with the City of Grand Junction's standards. This project coincides with the City of Grand Junction's overall plan for development. Eagle Crest will offer quality home sites which will be compatible with the surrounding land use.

PROJECT COMPLIANCE, COMPATIBILITY AND IMPACT:

Currently the land is located within the City of Grand Junction and is zoned P.D. 2.7, this zoning has been applied for and has been approved by the City Council. With the combining of two lots (Lots 2 and 3) into one lot, the density will fall from 2.7 to 2.36, well within the limits of the previous O.D.P. approval.

SURROUNDING LAND USE:

The surrounding land use in the vicinity of the subject property include single family dwellings on subdivided tracts intermixed with multi family condominium units. Agricultural production is non existent in the vicinity of the subject site. The only non-residential uses found are on Ridges Blvd. And consist of light office uses. Public Open Spaces almost surround the property.

SITE ACCESS AND TRAFFIC PATTERNS:

Access to Eagle Crest is gained from a series of interconnecting streets to Ridges Blvd. The subject property has new direct access off of Prospector's Point called Eagle Crest Court which will save the seven lot subdivision.

UTILITY SERVICE:

DOMESTIC WATER- All units within Eagle Crest will be served by a domestic water distribution system. An existing 8 inch water main is located within Prospector Point and will be extended within the property. All of the existing water mains are owned and maintained by the

Ute Water Conservancy District. Fire hydrants will be placed throughout the development. Sufficient flows and pressure exist to provide adequate water supply for fire protection.

SANITARY SEWER- A new sanitary sewage collection system will be constructed to serve all lots within the development. Sewer service will be extended from an existing 8 inch main stub located at the north end of the property. It is estimated that peak sewage flows generated by the lots within the development will be 10,000 gallons per day.

ELECTRIC, **GAS**, **PHONE**, & **CATV**- Electric, gas, and communication lines will be extended to each lot within the development from existing lines located next to the proposed development. Lines will be located in a "common trench" adjacent to the dedicated road right-of-way.

IRRIGATION WATER- Due to the nature of the development irrigation water will not be utilized. Irrigation of the landscaped areas will utilize domestic water supplies.

SITE SOILS AND GEOLOGY:

The soils on the site consist of an alluvial, course grain deposit placed by the action of the ancient Colorado River. These upper soils were found to range from less than one foot up to 14 feet in thickness. These upper soils are quite stratified, containing inter-bedded sand and silt lenses. The geologic materials encountered under the site consist of a course grain alluvial deposit overlying the Dakota Formation, which is considered bedrock on this site. The Dakota Formation can broadly be described as a series of thin to thick sandstones and sandy mudstone beds with inter-bedded siltstones, shales, and thin Lignite beds. Many strata of the Dakota Formation are often carbonaceous.

SIGNAGE PLANS:

A signage plan will be submitted to the City of Grand Junction, for permit approval and will be placed inside the entrance to the seven lots on the common area open space.

DEVELOPMENT SCHEDULE:

The rate at which development of Eagle Crest will occur is dependent upon the City's future growth and the demand for the Ridge's view lots and housing needs. At this time, it is anticipated that the seven lots will be marketed in one phase which will begin in the late summer of 1996.
